**Marybeth Lorbiecki**

*Restoration Agriculture* Mark Shepard, 2013 Around the globe most people get their calories from annual agriculture - plants that grow fast for one season, produce lots of seeds, then die. Every single human society that has relied on annual crops for staple foods has collapsed. *Restoration Agriculture* explains how we can have all of the benefits of natural, perennial ecosystems and create agricultural systems that imitate nature in form and function while still providing for our food, building, fuel and many other needs - in your own backyard, farm or ranch. This book, based on real-world practices, presents an alternative to the agriculture system of eradication and offers exciting hope for our future.

Water for Any Farm Mark Shepard, 2019-11-15 Written as a companion to the bestseller, *Restoration Agriculture*, this book will help farmers capture water in areas they want to, and avoid having water flow immediately to the low point. The result? Less water expense, healthier crops and livestock, and less erosion ... just to name a few. What you will read in this book is a distillation of over 25 years of on-the-ground experience working with and modifying the Yeomans' Keyline Plan. From the back yard suburbs to 10,000-acre ranches and everywhere in between, from permafrost mountainsides just shy of the Arctic Circle, to equatorial boulder fields of East Africa, areas with 300 inches of rain per year to those with less than 3 inches, I have personally installed systems based on the Keyline design methodology and its modified forms. What you will read in this book is tried and true. It is intended to give a sufficient background to any landowner so that they can optimize their water resource for higher site productivity, have greater drought resistance and just as importantly, to know deep in their heart that they have made even one little piece of earth a little more life-filled, livable and green.

**A Fierce Green Fire** Marybeth Lorbiecki, 2016-03-11 For anyone interested in wildlife, birds, wilderness areas, parks, ecology, conservation, environmental literature, and ethics, the name Aldo Leopold is sure to pop up. Since first publication, *Aldo Leopold: A Fierce Green Fire* has remained the classic short, inspiring biography of Leopold--the perfect companion to reading his ever popular *A Sand County Almanac*. Winning numerous awards, this comprehensive account of his life story is dynamic and readable, written in the context of the history of American conservation and illustrated with historic photographs. Marybeth Lorbiecki has now enriched *A Fierce Green Fire* in a way no other biography on Leopold has, adding numerous chapters on the ripple effects of his ideas, books, ecological vision, land ethic, and Shack, as well as of the ecological contributions of his children, graduate students, contemporary scholars, and organizations--and the wilderness

lands he helped preserve. Lorbiecki weaves these stories and factual information into the biography in a compelling way that keeps both lay and academic readers engaged. In the introduction to this edition, Lorbiecki makes it clear how much better our lives are because Leopold lived and why today we so radically need what he left us to bring about paradigm shifts in our ethical, economic, and cultural thinking. Instead of losing relevance, Leopold's legacy has gained ever more necessity and traction in the face of contemporary national and world challenges, such as species loss and climate change. Even the phenological studies he started at as a hobby are proving valuable, showing the climatic shifts that have occurred at the Shack lands since the 1930s, recognized by the plants and animals.

Farming for the Long Haul Michael Foley, 2019-02-01 It's all but certain that the next fifty years will bring enormous, not to say cataclysmic, disruptions to our present way of life. World oil reserves will be exhausted within that time frame, as will the lithium that powers today's most sophisticated batteries, suggesting that transportation is equally imperiled. And there's another, even more dire limitation that is looming: at current rates of erosion, the world's topsoil will be gone in sixty years. Fresh water sources are in jeopardy, too. In short, the large-scale agricultural and food delivery system as we know it has at most a few decades before it exhausts itself and the planet with it. Farming for the Long Haul is about building a viable small farm economy that can withstand the economic, political, and climatic shock waves that the twenty-first century portends. It draws on the innovative work of contemporary farmers, but more than that, it shares the experiences of farming societies around the world that have maintained resilient agricultural systems over centuries of often-turbulent change. Indigenous agriculturalists, peasants, and traditional farmers have all created broad strategies for survival through good times and bad, and many of them prospered. They also developed particular techniques for managing soil, water, and other resources sustainably. Some of these techniques have been taken up by organic agriculture and permaculture, but many more of them are virtually unknown, even among alternative farmers. This book lays out some of these strategies and presents techniques and tools that might prove most useful to farmers today and in the uncertain future.

**The School Garden Curriculum** Kaci Rae Christopher, 2019-04-23 Sow the seeds of science and wonder and inspire the next generation of Earth stewards The School Garden Curriculum offers a unique and comprehensive framework, enabling students to grow their knowledge throughout the school year and build on it from kindergarten to eighth grade. From seasonal garden activities to inquiry projects and science-skill building, children will develop organic gardening solutions, a positive land ethic, systems thinking, and instincts for ecological stewardship. The world needs young people to grow into strong, scientifically literate environmental stewards. Learning gardens are great places to build this knowledge, yet until now there has been a lack of a multi-grade curriculum for school-wide teaching aimed at fostering a connection with the Earth. The book offers: A complete K-8 school-wide framework Over 200 engaging, weekly lesson plans - ready to share Place-based activities, immersive learning, and hands-on activities Integration of science, critical thinking, permaculture, and

life skills Links to Next Generation Science Standards Further resources and information sources. A model and guide for all educators, The School Garden Curriculum is the complete package for any school wishing to use ecosystem perspectives, science, and permaculture to connect children to positive land ethics, personal responsibility, and wonder, while building vital lifelong skills. **Farming the Woods** Ken Mudge, Steve Gabriel, 2014 Learn how to fill forests with food by viewing agriculture from a remarkably different perspective: that a healthy forest can be maintained while growing a wide range of food, medicinal, and other nontimber products. The practices of forestry and farming are often seen as mutually exclusive, because in the modern world, agriculture involves open fields, straight rows, and machinery to grow crops, while forests are reserved primarily for timber and firewood harvesting. In *Farming the Woods*, authors Ken Mudge and Steve Gabriel demonstrate that it doesn't have to be an either-or scenario, but a complementary one; forest farms can be most productive in places where the plow is not: on steep slopes and in shallow soils. Forest farming is an invaluable practice to integrate into any farm or homestead, especially as the need for unique value-added products and supplemental income becomes increasingly important for farmers. Many of the daily indulgences we take for granted, such as coffee, chocolate, and many tropical fruits, all originate in forest ecosystems. But few know that such abundance is also available in the cool temperate forests of North America. *Farming the Woods* covers in detail how to cultivate, harvest, and market high-value nontimber forest crops such as American ginseng, shiitake mushrooms, ramps (wild leeks), maple syrup, fruit and nut trees, ornamentals, and more. Along with profiles of forest farmers from around the country, readers are also provided comprehensive information on: • historical perspectives of forest farming; • mimicking the forest in a changing climate; • cultivation of medicinal crops; • cultivation of food crops; • creating a forest nursery; • harvesting and utilizing wood products; • the role of animals in the forest farm; and, • how to design your forest farm and manage it once it's established. *Farming the Woods* is an essential book for farmers and gardeners who have access to an established woodland, are looking for productive ways to manage it, and are interested in incorporating aspects of agroforestry, permaculture, forest gardening, and sustainable woodlot management into the concept of a whole-farm organism.

**The Carbon Farming Solution** Eric Toensmeier, 2016 Agriculture is rightly blamed as a major culprit of our climate crisis. But in this groundbreaking new book, Eric Toensmeier argues that agriculture--specifically, the subset of practices known as carbon farming--can, and should be, a linchpin of a global climate solutions platform--

*Moral Conversion in Scripture, Self, and Society* Krijn Pansters, Anton ten Klooster, 2024-06-04 *Moral Conversion in Scripture, Self, and Society* offers a broad - historical, theological, and philosophical - reflection on the phenomenon of moral conversion. Examining life-changing transformations within trajectories of spiritual and moral growth, the contributors to this volume show how individuals move, or should move, in one way or another, away from the pursuit of solipsistic

satisfactions, through the practice of self-awareness and the performance of social attentiveness, toward the prioritization of shared values. Together, they address the difficulty of realizing in selves and societies some sort of definitive moral conversion – of final turn toward the truly good. Contributors are: David Couturier, Matthew Dugandzic, Erik Eynikel, Aaron Gies, Patrick Jones, Angela Knobel, Daniel Lightsey, Peter Lovas, Giulia Lovison, Krijn Pansters, Hanna Roose, Anton ten Klooster, Willem Marie Speelman, Mark Therrien, Luke Togni, Brian Treanor, Louke van Wensveen, Archibald van Wieringen, and Jamie Washam.

Restoration Agriculture in Practice , 2014-06-24 Monoculture farming works against nature, takes more energy and inputs, and produces concentrated and often toxic wastes. Over time, resources are depleted and yields decline. Polyculture farming systems are integrated, diverse systems which are more resilient and mimic nature. So-called wastes become resources. Ecosystems are restored and balanced. Once established, very little effort is needed to maintain the systems. In this professionally produced video Mark Shepard takes viewers on a video tour of his Wisconsin farm and conducts a full-scale introductory presentation on his unique combination of permaculture, silvaculture, agroforestry and eco-farming. Understand biomes and how to choose appropriate crop-producing perennials for your region. See real-world examples of traditional and innovative modified keyline water management principles. Experience transitional strategies firsthand to move from annual commodity crops to perennials which benefit the entire farm ecosystem.
