Tank Angling in India Henry Sullivan Thomas, 1887

Management of Fish Diseases Sumanta Kumar Mallik, Neetu Shahi, Pramod Kumar Pandey, 2025-03-22 This book covers various aspects of aquatic animal health, such as pathogenic and beneficial microbes, disease diagnosis, treatment and preventive measures, biosecurity, disease management. The environmental factors affecting aquatic animal well-being and their nutritional requirements are also discussed. Finally, emerging trends, and future research and management directions are also concluded in this book. Aquatic animals are a crucial source of nutrition for people worldwide, as they provide at least 20% of animal protein intake for over 3 billion individuals, according to the Food and Agriculture Organization (FAO). Furthermore, fishing and aquaculture industries generate employment and income for millions, particularly in developing countries. However, pollution, habitat destruction, overfishing, climate change, and disease outbreaks pose a threat to aquatic animal health. Disease outbreaks and pathogenic microbes can cause significant harm, necessitating immediate attention. Addressing this issue requires multifaceted approach that includes enhancing water quality, managing animal stress levels, improving biosecurity measures, and practicing responsible aquaculture techniques. Finally, collaboration between government, industry, and researchers is critical to developing new and effective strategies for mitigating the impact of disease outbreaks on aquatic animal health. This book provides concise information for students, teachers, researchers, and academicians interested in the field of aquatic animal health. It also serves as a reference book to administrators, practitioners, stakeholders, and non-professionals interested in sustainable aquatic animal health management.

The Common Food-fishes of the Madras State K. Chidambaram, 1953

The Blue Commons Guy Standing, 2022-07-07 A FINANCIAL TIMES BEST ECONOMICS BOOK OF 2022 'A landmark book... The Blue Commons is at once a brilliant synthesis, a searing analysis, and an inspiring call to action.' - David Bollier 'With remarkable erudition, passion and lyricism, Guy Standing commands the reader to wake up to the threat posed by rentier capitalism's violent policies for extraction, exploitation and depletion of that which is both common to us all, but also vital to our survival: the sea and all within it.' - Ann Pettifor 'Shines a bright light on the economy of the oceans, directing us

brilliantly towards where a sustainable future lies.' - Danny Dorling 'This is a powerful, visionary book - essential reading for all who yearn for a better world.' - Jason Hickel The sea provides more than half the oxygen we breathe, food for billions of people and livelihoods for hundreds of millions. But giant corporations are plundering the world's oceans, aided by global finance and complicit states, following the neoliberal maxim of Blue Growth. The situation is dire: rampant exploitation and corruption now drive all aspects of the ocean economy, destroying communities, intensifying inequalities, and driving fish populations and other ocean life towards extinction. The Blue Commons is an urgent call for change, from a campaigning economist responsible for some of the most innovative solutions to inequality of recent times. From large nations bullying smaller nations into giving up eco-friendly fishing policies to the profiteering by the Crown Estate in commandeering much of the British seabed, the scale of the global problem is synthesised here for the first time, as well as a toolkit for all of us to rise up and tackle it. The oceans have been left out of calls for a Green New Deal but must be at the centre of the fight against climate change. How do we do it? By building a Blue Commons alternative: a transformative worldview and new set of proposals that prioritise the historic rights of local communities, the wellbeing of all people and, with it, the health of our oceans.

Micro and Nanoplastics in Aquatic Environment Ashok Vaseashta, Maris Klavins, Olena Stabnikova, 2025-09-02 Over the past century and a half, advancements in polymer science—encompassing both natural and synthetic materials—have led to the development of strong, lightweight, and highly flexible polymers. Their remarkable diversity and versatility make them indispensable in modern life. However, the escalating accumulation of fragmented plastic waste in the environment has become a pressing global concern. Micro- and nanoplastics (MNPs), which tend to accumulate at the air-water interface, pose potential safety and security risks by serving as carriers for viruses. Currently, there is limited research on the effects of MNP consumption in both human and non-human models. This book provides a comprehensive examination of the challenges associated with MNPs, their environmental monitoring, and management strategies aimed at risk assessment and mitigation. It explores emerging techniques for identifying, collecting, and mitigating MNP contamination in aquatic ecosystems. Additionally, it delves into the toxicokinetics, fate, and transport of MNPs, including recent findings on their movement within the human body. A notable development in this field is the application of metamaterials for detecting and degrading organic pollutants and microplastics through photocatalysis. From a policy perspective, refining international standards—encompassing product labeling, responsible usage, and strategies for recycling, upcycling, and sustainable disposal—remains imperative for mitigating the long-term impact of MNP pollution.
