Ecoenvolventes Varini, Claudio,2016-01-08 Eco-envolventes identifica el límite de una construcción con el entorno: fachadas y cubiertas son vistos como un sistema donde todas sus partes co-accionan. El sufijo “eco” está por subrayar la vocación de este sistema: el de reducir los consumos energéticos y los impactos ambientales, como las emisiones de gases efecto invernadero. El ámbito de referencia es el colombiano, con diferentes manifestaciones climáticas tropicales y su ubicación geográfica próxima al ecuador. Este libro se propone como un texto que abre un camino hacia la arquitectura sostenible con especial referencia al papel que juegan las envolventes en la gestión energética en clima tropical analizando las formas pasivas para ellos.
