**Meningococcal Disease** Andrew J. Pollard, Martin C.J. Maiden, 2008-02-02 Meningococcal septicemia and meningitis continue to be important causes of devastating illness, death, and long-term disability in both developed and resource-poor countries of the world. Few diseases have attracted as much public attention, or are as feared by parents and family members, as well as the medical staff who have to care for affected patients. The unexpected and unpredictable occurrence of the disease in previously healthy children and young adults, its rapid progression, and the frequent occurrence of purpura fulminans with the resulting gangrene of limbs and digits and the requirement for mutilating surgery, have all heightened both public and medical interest in the disease. Over the past two decades there has been a rapid increase in knowledge of many aspects of meningococcal disease as a result of intensive efforts by workers in many different fields: clinicians have studied the early presenting features and acute pathophysiology of the disorder; clinical scientists have explored the immunopathological mechanisms responsible for disease and have highlighted the important roles played by the host inflammatory response and pro-inflammatory cytokines in mediating damage to blood vessels and organs; microbiologists have developed new diagnostic methods; public health physicians and epidemiologists have improved surveillance techniques with the help of molecular tools provided by bacterial population biologists; and basic scientists have used the powerful new tools in molecular and cell biology to elucidate virulence mechanisms.

**Microemulsions** Reza Najjar, 2012-03-16 The rapidly increasing number of applications for microemulsions has kept this relatively old topic still at the top point of research themes. This book provides an assessment of some issues influencing the characteristics and performance of the microemulsions, as well as their main types of applications. In chapter 1 a short introduction about the background, various aspects and applications of microemulsions is given. In Part 2 some experimental and modeling investigations on microstructure and phase behavior of these systems have been discussed. The last two parts of book is devoted to discussion on different types of microemulsion's applications, namely, use in drug delivery, vaccines, oil industry, preparation of nanostructured polymeric, metallic and metal oxides materials for different applications.

**Unconventional Green Synthesis of Inorganic Nanomaterials** Silvia Gross, 2024-05-17 Inorganic nanomaterials are an extremely broad and versatile class of materials and their enhanced chemical, thermal and mechanical stability with respect to their organic counterparts make them appealing candidates for a wide range of technological applications. Recent

research has explored novel synthesis routes relying on non-standard conditions and in many cases, these unconventional routes are inherently sustainable. This book will provide a much needed overview of the fast-developing areas of green synthesis of metal nanoparticles, metal oxides and metal sulphides. These have a broad range of applications, including in catalysis, electronics, optics and nanomedicine. It will also show how it is possible to combine environmental and economical sustainability and will provide readers with a state-of-the-art and updated overview of lesser-known and emerging synthesis routes for inorganic nanomaterials. Suitable for advanced undergraduates, postgraduates and other researchers, it provides a convenient introduction to the topic.

**Magnetic Oxides and Composites** Rajshree B. Jotania, Sami H. Mahmood, 2018-05-10 The book focuses on the relevant basic concepts of Magnetic oxides, as well as on synthesis routes and important applications of spinel ferrites, hexaferrites and magnetic oxide nanomaterials. Keywords: Magnetic Oxides, Spinel Ferrites, Hexaferrites, Magnetoelectric Ceramic Composites, Soft Ferrites, Nano-Size Spinel Ferrites, Magnetic Nanoparticles, Device Miniaturization.

**High-Performance Ceramics X** Wei Pan, Jiang Hong Gong, 2018-08-31 The 10th China International Conference on High-Performance Ceramics (CICC-10) Selected, peer reviewed papers from the 10th China International Conference on High-Performance Ceramics (CICC-10), November 4-7, 2017, Chang, China

**Handbook of Semiconductor Manufacturing Technology** Yoshio Nishi, Robert Doering, 2017-12-19 Retaining the comprehensive and in-depth approach that cemented the bestselling first edition's place as a standard reference in the field, the Handbook of Semiconductor Manufacturing Technology, Second Edition features new and updated material that keeps it at the vanguard of today's most dynamic and rapidly growing field. Iconic experts Robert Doering and Yoshio Nishi have again assembled a team of the world's leading specialists in every area of semiconductor manufacturing to provide the most reliable, authoritative, and industry-leading information available. Stay Current with the Latest Technologies In addition to updates to nearly every existing chapter, this edition features five entirely new contributions on... Silicon-on-insulator (SOI) materials and devices Supercritical CO<sub>2</sub> in semiconductor cleaning Low- $\kappa$  dielectrics Atomic-layer deposition Damascene copper electroplating Effects of terrestrial radiation on integrated circuits (ICs) Reflecting rapid progress in many areas, several chapters were heavily revised and updated, and in some cases, rewritten to reflect rapid advances in such areas as interconnect technologies, gate dielectrics, photomask fabrication, IC packaging, and 300 mm wafer fabrication. While no book can be up-to-the-minute with the advances in the semiconductor field, the Handbook of Semiconductor Manufacturing Technology keeps the most important data, methods, tools, and techniques close at hand.

*Carbon Allotropes: Metal-Complex Chemistry, Properties and Applications* Boris Ildusovich Kharisov, Oxana Vasilievna Kharissova, 2019-01-02 This book provides a detailed description of metal-complex functionalized carbon allotrope forms, including classic (such as graphite), rare (such as M- or T-carbon), and nanoforms (such as carbon nanotubes, nanodiamonds,

etc.). Filling a void in the nanotechnology literature, the book presents chapters generalizing the synthesis, structure, properties, and applications of all known carbon allotropes. Metal-complex composites of carbons are described, along with several examples of their preparation and characterization, soluble metal-complex carbon composites, cost-benefit data, metal complexes as precursors of carbon allotropes, and applications. A lab manual on the synthesis and characterization of carbon allotropes and their metal-complex composites is included. Provides a complete description of all carbon allotropes, both classic and rare, as well as carbon nanostructures and their metal-complex composites; Contains a laboratory manual of experiments on the synthesis and characterization of metal-complex carbon composites; Discusses applications in diverse fields, such as catalysis on supporting materials, water treatment, sensors, drug delivery, and devices.
