Laser Weapon Fouad Sabry,2022-08-12 What Is Laser Weapon A directed-energy weapon that makes use of lasers is referred to as a laser weapon. After many decades of research and development, directed-energy weapons such as lasers are still in the experimental stage as of January 2020. It is unknown whether or not these weapons will ever be deployed as operational, high-performance military weapons, and if so, when this will occur. If there is fog, smoke, dust, precipitation, snow, smog, foam, or purposefully scattered obscurant compounds in the atmosphere, atmospheric thermal blooming will be much more severe than it already is. This issue is still mostly unresolved. A laser, at its core, is a light-emitting diode that, in order to function properly and avoid producing unwanted thermal blooming, must emit a beam of light into the atmosphere or into a vacuum. weapons systems seem to be on the path to becoming accepted technologies of warfare. The weaponization of artificial intelligence raises questions about whether human beings will maintain control of the use of force. The notion of meaningful human control has become a focus of international debate on lethal autonomous weapons systems among members of the United Nations: many states have diverging ideas about various complex forms of human-machine interaction and the point at which human control stops being meaningful. In *Autonomous Weapons Systems and International Norms* Ingvild Bode and Hendrik Huelss present an innovative study of how testing, developing, and using weapons systems with autonomous features shapes ethical and legal norms, and how standards manifest and change in practice. Autonomous weapons systems are not a matter for the distant future - some autonomous features, such as in air defence systems, have been in use for decades. They have already incrementally changed use-of-force norms by setting emerging standards for what counts as meaningful human control. As UN discussions drag on with minimal progress, the trend towards autonomizing weapons systems continues. A thought-provoking and urgent book, *Autonomous Weapons Systems and International Norms* provides an in-depth analysis of the normative repercussions of weaponizing artificial intelligence.

Navy Shipboard Lasers for Surface, Air, and Missile Defense Congressional Research Congressional Research  
Service,2014-12-23 Department of Defense (DOD) development work on high-energy military lasers, which has been  
underway for decades, has reached the point where lasers capable of countering certain surface and air targets at ranges of  
about a mile could be made ready for installation on Navy surface ships over the next few years. More powerful shipboard  
lasers, which could become ready for installation in subsequent years, could provide Navy surface ships with an ability to

counter a wider range of surface and air targets at ranges of up to about 10 miles. The Navy and DOD have conducted development work on three principal types of lasers for potential use on Navy surface ships-fiber solid state lasers (SSLs), slab SSLs, and free electron lasers (FELs). One fiber SSL prototype demonstrator developed by the Navy is the Laser Weapon System (LaWS). The Navy plans to install a LaWS system on the USS Ponce, a ship operating in the Persian Gulf as an interim Afloat Forward Staging Base (AFSB[I]), in the summer of 2014 to conduct continued evaluation of shipboard lasers in an operational setting. The Navy reportedly anticipates moving to a shipboard laser program of record in the FY2018 time frame and achieving an initial operational capability (IOC) with a shipboard laser in FY2020 or FY2021. Although the Navy is developing laser technologies and prototypes of potential shipboard lasers, and has a generalized vision for shipboard lasers, the Navy currently does not yet have a program of record for procuring a production version of a shipboard laser. The possibility of equipping Navy surface ships with lasers in coming years raises a number of potential issues for Congress, including the following:

Cette terminologie inclut à la fois ce qui est utile pour opérer dans un cadre national et dans un cadre international (coalitions, OTAN), dans un univers de plus en plus mondialisé. Cet ouvrage contient plus de 10 000 mots et expressions en français et en anglais. Il contient aussi environ 4 900 acronymes anglais et 1 000 acronymes français.

*Shining a Regulatory Spotlight on New Lasers* Kobi Leins, 2016 The purpose of this article is to consider potential legal implications of deployment of nano-enhanced technology in armed conflict. Nano-lasers will undoubtedly enhance the performance of many weapons systems, including autonomous systems, with better energy storage, more rapid computations, and lower power consumption, to name just a few features, but in this article I consider just two types of technology purportedly utilising nano-lasers. Firstly, I will discuss the Laser Weapons System (“LaWS”), a directed weapon already in use. The LaWS system is often wrongly described as nano-enhanced; I will explain why the descriptor is fallacious while also discussing the legal implications, if any, which arise from the deployment of the system (and whether this error has any legal implications). Secondly, I will examine optogenetics, which utilises nano-laser light delivery technology to effectively switch neurons “on” and “off” to alter brain function. This technology is currently at the research stage with mice, and has not yet been used by the military. I plan to identify the key legal implications if such technology were to be used in humans in armed conflict. Two key legal issues arise in relation to both technological developments. One involves the responsibility of States Parties to Additional Protocol I to review and supervise the use of emerging weapons technology to ensure compliance with the law of armed conflict (LOAC) and the second involves identifying what specific and general rules may apply to such technology. General legal principles have relevance to all means and methods of warfare and so apply as much to nano-enhanced or based laser weapons systems as to any other category of lethal or non-lethal weapon. Furthermore, the lack of anticipation of the technology by the original drafters does not remove the obligation to review any such technology before its use in armed conflict.
