Proposed Revisions to the Common Rule for the Protection of Human Subjects in the Behavioral and Social Sciences National Research Council, Division of Behavioral and Social Sciences and Education, Committee on Population, Committee on National Statistics, Board on Behavioral, Cognitive, and Sensory Sciences, Committee on Revisions to the Common Rule for the Protection of Human Subjects in Research in the Behavioral and Social Sciences, 2014-03-31
Proposed Revisions to the Common Rule for the Protection of Human Subjects in the Behavioral and Social Sciences examines how to update human subjects protections regulations so that they effectively respond to current research contexts and methods. With a specific focus on social and behavioral sciences, this consensus report aims to address the dramatic alterations in the research landscapes that institutional review boards (IRBs) have come to inhabit during the past 40 years. The report aims to balance respect for the individual persons whose consent to participate makes research possible and respect for the social benefits that productive research communities make possible. The ethics of human subjects research has captured scientific and regulatory attention for half a century. To keep abreast of the universe of changes that factor into the ethical conduct of research today, the Department of Health and Human Services published an Advance Notice of Proposed Rulemaking (ANPRM) in July 2011. Recognizing that widespread technological and societal transformations have occurred in the contexts for and conduct of human research since the passage of the National Research Act of 1974, the ANPRM revisits the regulations mandated by the Act in a correspondingly comprehensive manner. Its proposals aim to modernize the Common Rule and to improve the efficiency of the work conducted under its auspices. Proposed Revisions to the Common Rule for the Protection of Human Subjects in the Behavioral and Social Sciences identifies issues raised in the ANPRM that are critical and feasible for the federal government to address for the protection of participants and for the advancement of the social and behavioral sciences. For each identified issue, this report provides guidance for IRBs on techniques to address it, with specific examples and best practice models to illustrate how the techniques would be applied to different behavioral and social sciences research procedures.

Comparative handbook: robotic technologies law Alain Bensoussan, J  r  my Bensoussan, 2016-06-28 Studies of the overall impact of robotics on the economy have shown that investments in its various sectors - industrial, professional and service robotics - are increasing globally and the markets associated with them are valued in billions. Robotization improves the competitiveness of enterprises, while collaborative robotics reinvents methods of production. Beyond the economic outlook, service robotics, backed by the development of artificial intelligence, raises challenging ethical and social issues. The legal analysis of robotics is no mean feat because it covers a very diverse technical reality. Companies whose businesses are focused on robotic technologies and applications can be confronted with a complex legal situation resulting from the plurality of the applicable rules which have not necessarily been conceived or adopted bearing in mind their specific constraints. This situation should not hamper their development. It only implies taking cues from the economic legal norms which promote such developments and conducting an analysis of the legal risks which they face, given the applicable rules of liability. This comparative study - carried out by members of the Lexing   Network - proposes an overview, having regard to the legislation of 17 different countries, of the legal issues raised by robotics and the way the law in force responds, in a more or less satisfactory manner. Research on Translator and Interpreter Training Jackie Xiu Yan, Jun Pan, Honghua Wang, 2017-11-29 This book comprehensively examines the development of translator and interpreter training using bibliometric reviews of the state of the field and empirical studies on classroom practice. It starts by introducing databases in bibliometric reviews and presents a detailed account of the reasons behind the project and its objectives as well as a description of the methods of constructing databases. The introduction is followed by full-scale review studies on various aspects of translator and interpreter training, providing not only an overall picture of the research themes and methods, but also valuable information on active authors, institutions and countries in the subfields of translator training, interpreter training, and translator and interpreter training in general. The book also compares publications from different subfields of research, regions and journals to show the special features within this discipline. Further, it provides a series of empirical studies conducted by the authors, covering a wide array of topics in translator and interpreter training, with an emphasis on learner factors. This collective volume, with its unique perspective on bibliometric data and empirical studies, highlights the latest development in the field of translator and interpreter training research. The findings presented will help researchers, trainers and practitioners to reflect on the important issues in the discipline and find possible new directions for future research.

El programa R, herramienta clave en investigaci  n Carlos G. Redondo Figuero, 2017-02-08 La investigaci  n, como uno de los principales motores del desarrollo de un pa  s, solo tiene   xito cuando se hace adecuadamente, es decir, cuando prosigue los pasos del M  todo Cient  fico, ya que si sigue un camino confundido no llegar   a alcanzar el fin deseado. Por tanto, se necesita formaci  n en metodolog  a de investigaci  n. Adem  s, precisa de unas herramientas adecuadas, siendo una de ellas

un programa que permita el análisis estadístico de los datos: el programa R. El investigador debe tener soltura en el manejo de la informática, para lo cual es fundamental conocer el programa R, que destaca por sus excelentes capacidades estadísticas y gráficas. Sin lugar a dudas R es el mejor y más completo programa estadístico. Además de ser totalmente gratuito, sobrepasa en capacidades a cualquier otro programa, comercial o no, por lo que es deseable que todo investigador se vaya introduciendo en el manejo de este programa. Su conocimiento permitirá al investigador realizar cualquier técnica estadística que necesite para analizar los datos de su estudio. Es un programa con una curva de aprendizaje lenta al principio debido a que es muy exigente en la escritura correcta de su lenguaje. Una vez superada esta fase inicial, el aprendizaje es más fácil y seguro. Se ha dividido el libro en cuatro partes fundamentales: Una primera parte, dedicada al programa R y su entorno. Es primordial que el investigador tenga correctamente instalado el programa R y las librerías (paquetes) de apoyo. El manejo adecuado de todo ello, así como de las ayudas y gestión de los ficheros y gráficos se facilita enormemente con el entorno de programación RStudio. Una segunda parte, se dedica a conocer la sintaxis y la gramática de R. Si alguien quiere manejar un lenguaje, previamente debe aprenderlo correctamente. Este esfuerzo se ve facilitado con multitud de ejemplos y problemas que le proporcionarán la soltura necesaria para manejar los diferentes objetos de R. La tercera parte se dedica a estudiar sus excelentes capacidades gráficas. El investigador que quiera transmitir sus ideas y hallazgos debe antes aprender a crear los gráficos adecuados. Se presentan los tres sistemas disponibles actualmente: grid, lattice y ggplot2. En ellos el investigador descubrirá un sinnúmero de posibilidades. La cuarta parte del libro se dedica a la programación en R. Se presenta paulatinamente para que el lector no se agobie, ni se asuste. Aprenderá a programar numerosas funciones según sus necesidades.
