Forensic Pathology David Dolinak, Evan Matshes, Emma O. Lew, 2005-04-08 Forensic Pathology is a comprehensive reference that uses a case-oriented format to address, explain and guide the reader through the varied topics encountered by forensic pathologists. Developed in response to a severe void in the literature, the book addresses topics ranging from medicolegal investigation of death to death scene investigation, forensic autopsy, and artifacts of resuscitation as well as complications of medical therapy, forensic osteology, forensic odontology, forensic photography, and death certification. The book includes various types of cases, including sudden natural death, asphyxia, motor vehicle collisions, death in custody, child abuse and elder abuse, acute psychiatric and emotional deaths, and pregnancy. It contains sample descriptions of pathological lesions which serve to aid pathologists in reporting their findings to law enforcement agencies, attorneys, and others involved in investigations of sudden death. The concepts outlined in the text are beautifully illustrated by large, colorful photographs. There are also Do and Don't sections at the end of each chapter that provide guidance for handling the types of cases examined. Paleodemography Robert D. Hoppa,James W. Vaupel,2008-10-30 Paleodemography is the field of enquiry that attempts to identify demographic parameters from past populations (usually skeletal samples) derived from archaeological contexts, and then to make interpretations regarding the health and well-being of those populations. However, paleodemographic theory relies on several assumptions that cannot easily be validated by the researcher, and if incorrect, can lead to large errors or biases. In this book, physical anthropologists, mathematical demographers and statisticians tackle these methodological issues for reconstructing demographic structure for skeletal samples. Topics discussed include how skeletal morphology is linked to chronological age, assessment of age from the skeleton, demographic models of mortality and their interpretation, and biostatistical approaches to age structure estimation from archaeological samples. This work will be of immense importance to anyone interested in paleodemography, including biological and physical anthropologists, demographers, geographers, evolutionary biologists and statisticians.
