Topografía subterránea para minería y obras Miquel Estruch Serra, Ana Tapia Gómez, 2003 El presente libro ofrece una descripción exhaustiva de los instrumentos y métodos propios de los levantamientos planimétricos y altimétricos en galerías, explotaciones mineras, túneles y todo tipo de obras a realizar en el subsuelo, con lo que viene a cubrir una laguna existente en publicaciones relacionadas con la topografía propiamente subterránea. Su objetivo principal es proporcionar a los estudiantes y técnicos profesionales en las tareas mineras y obras subterráneas los conocimientos necesarios para la orientación y el levantamiento de planos del interior de las minas, el estudio y control de los hundimientos mineros, la determinación de las intrusiones mineras, los proyectos y cálculos de rompimientos mineros, los de la comunicación de túneles, así como el replanteo y la dirección de dichas labores subterráneas. Se abordan los sistemas clásicos tradicionales, los modernos automatizados y computarizados, así como la aplicación del rayo láser en los diferentes trabajos topográficos de orientación y dirección de las labores subterráneas. Todos los conocimientos que se exponen son importantes para los técnicos que han de ejecutar trabajos subterráneos, ya que si no poseen una formación adecuada se desorientan, debido a las condiciones tan particulares de dichas operaciones, pierden mucho tiempo tratando de aplicar los procedimientos clásicos de la superficie y con frecuencia deben afrontar problemas que les parecen imposibles de resolver. Todo ello les ocurre por la falta de una instrucción indispensable que se ofrece en este libro, y que es de aplicación en la minería y en las obras a realizar en el subsuelo.
