Halophytes as a resource for livestock and for rehabilitation of degraded lands V. Squires, A.T. Ayoub, 2012-12-06

Desertification (land degradation in arid, semi-arid and dry sub-humid areas resulting mainly from adverse human impacts) is the main environmental problem of dry lands, which occupy more than 40 per cent of the total global land area. The phenomenon threatens about 3.6 billion hectares and currently affects the livelihood of about 900 million people. The world is now losing annually about 1.5 million hectares of total irrigated lands (240 million hectares) due mostly to salinization, mainly in drylands. Salt affected soils are widely distributed throughout the arid and semi-arid regions, and particularly severe in China (7 million ha), India (20 million ha), Pakistan (3.2 million ha), USA (5.2 million ha), as well as Near East, southern Europe and elsewhere. Demands on production have increased the pressure on existing productive land and moved the limits of production onto increasingly marginal lands. Wise land-use practices have yet to be developed for such conditions. The Executive Director of UNEP reported to the Governing Council in February 1992 concerning the Status of Desertification and Implementation of the United Nations Plan of Action to Combat Desertification (PACD). The Report concludes that major efforts to implement the PACD had gone into supporting measures rather than concrete corrective field operations. Little evidence of progress was found in irrigated croplands, rainfed croplands or rangelands. It was recommended that every piece of land should be used in keeping with its ecological characteristics, natural capabilities and constraints.

Current Research in Archaeology of South American Pampas Gustavo Federico Bonnat, María Clara Álvarez, Diana Leonis Mazzanti, María Paula Barros, Mariano Bonomo, Verónica Puente, 2024-05-16 This volume includes a selection of papers derived from the IX Conference of the Pampas region of Argentina, held virtually in 2021 in Mar del Plata (Buenos Aires, Argentina) and organized by the National University of Mar del Plata. Located in the southern cone of South America, the Pampas are vast plain grasslands that range across central Argentina and are one of the largest prairies of the world. The early traces of humans date back to ca. 12,200 14C years BP. From the Late Pleistocene up to the Spanish Conquest in the sixteenth century, hunter-gatherer groups occupied the Pampas. Archaeological research in the region has been focused on fascinating topics such as the early peopling, the mobility circuits in the past, the interaction between indigenous and colonial societies, and the perception of this complex past by the modern Pampean society, mainly integrated by European immigrants and indigenous descendants. This book gathers these themes and includes a selection of a conference of one of the keynote speakers and 18 papers that represent diverse topics on the current Pampean research. The book is structured in two main axes: 1) prehispanic studies using different lines of evidence; 2) historical archaeology and cultural heritage.

Pampean Lakes Eduardo Luis Piovano, Silvina Stutz, Juan Antonio Morales, Daniel Ariztegui, 2025-07-20 This book is for advanced students, researchers and professionals from Earth and Environmental Sciences. The Argentinean Pampa plain is an extensive region of ca 673,000 km² between 30°S and 38°S in South America. The region encompasses a large number of lakes (>50,000) of highly variable sizes. Pampean lakes have been very sensitive to past and recent climatic change. Thus, paleolimnological research across the Pampa plain provides unique insights into regional environmental variability since the Late Pleistocene up to the most recent hydroclimatic changes. These lakes are sensors of both the documented increase in precipitation that occurred after the 1970's seventies as well as substantial changes in land use. It compiles the most outstanding information of the region for the last 30 years regarding ecological aspects, changes in land-use processes and their impact on water bodies, paleolimnological reconstructions, archeology, hydroclimatic variability and associated human dimension. This knowledge provides environmental information that is fundamental to develop integrated water management projects.
