Life Between Buildings Jan Gehl, 2011 Life Between Buildings is Jan Gehl's classic text on the importance of designing urban public space with the fundamental desires of people as guiding principles. The book describes essential elements that contribute to people's enjoyment of spaces in the public realm. These elements remain remarkably constant even as architectural styles go in and out of fashion and the character of the 'life between buildings' changes.

The Sustainable Urban Development Reader Stephen M. Wheeler, Timothy Beatley, 2004 Bringing together classic readings from a wide variety of sources, this key book investigates how our cities and towns can become more sustainable. Thirty-eight selections span issues such as land use planning, urban design, transportation, ecological restoration, economic development, resource use and equity planning. Section introductions outline the major themes, whilst the editors' introductions to the individual writings explain their interest and significance to wider debates. Additional sections present twenty-four case studies of real-world sustainable urban planning examples, sustainability planning exercises, and further reading. Providing background in theory, practical application, and vision, in a clear, accessible format, The Sustainable Urban Development Reader is an essential resource for students, professionals, and indeed anyone interested in the future of urban environments.

How to Study Public Life Jan Gehl, Birgitte Svarre, 2013-12-04 How do we accommodate a growing urban population in a way that is sustainable, equitable, and inviting? This question is becoming increasingly urgent to answer as we face diminishing fossil-fuel resources and the effects of a changing climate while global cities continue to compete to be the most vibrant centers of culture, knowledge, and finance. Jan Gehl has been examining this question since the 1960s, when few urban designers or planners were thinking about designing cities for people. But given the unpredictable, complex and ephemeral nature of life in cities, how can we best design public infrastructure—vital to cities for getting from place to place, or staying in place—for human use? Studying city life and understanding the factors that encourage or discourage use is the

key to designing inviting public space. In *How to Study Public Life* Jan Gehl and Birgitte Svarre draw from their combined experience of over 50 years to provide a history of public-life study as well as methods and tools necessary to recapture city life as an important planning dimension. This type of systematic study began in earnest in the 1960s, when several researchers and journalists on different continents criticized urban planning for having forgotten life in the city. City life studies provide knowledge about human behavior in the built environment in an attempt to put it on an equal footing with knowledge about urban elements such as buildings and transport systems. Studies can be used as input in the decision-making process, as part of overall planning, or in designing individual projects such as streets, squares or parks. The original goal is still the goal today: to recapture city life as an important planning dimension. Anyone interested in improving city life will find inspiration, tools, and examples in this invaluable guide.

The Sustainable Urban Design Handbook Nico Larco, Kaarin Knudson, 2024-04-30 The Sustainable Urban Design Handbook gathers the best sustainability practices and latest research from the fields of architecture, landscape architecture, planning, development, ecology, and environmental engineering and presents them in a graphically rich and accessible format that can help guide urban design decisions in cities of all sizes. The book presents a comprehensive framework that organizes more than 50 elements of sustainable urban design under five main topics—Energy Use & Greenhouse Gas, Water, Ecology & Habitat, Energy Use & Production, and Equity & Health—and relative to four project scales: Region & City, District & Neighborhood, Block & Street, and Project & Parcel. Each element chapter includes a summary of importance and background, compares typical practices and recommended approaches, explains connections to other elements, and concludes with urban design guidelines that can be used to directly inform projects and decisions. Easy to use and reference, The Sustainable Urban Design Handbook provides both an in-depth introduction to topics across sustainable urban design and serves as an on-going reference for anyone involved in the creation of sustainable urban environments. This resource will be useful to design and planning professionals, community members, students, and elected officials in guiding decisions about our sustainable future.

The City at Eye Level Meredith Glaser, 2012 Although rarely explored in academic literature, most inhabitants and visitors interact with an urban landscape on a day-to-day basis is on the street level. Storefronts, first floor apartments, and sidewalks are the most immediate and common experience of a city. These plinths are the ground floors that negotiate between inside and outside, the public and private spheres. *The City at Eye Level* qualitatively evaluates plinths by exploring specific examples from all over the world. Over twenty-five experts investigate the design, land use, and road and foot traffic in rigorously researched essays, case studies, and interviews. These pieces are supplemented by over two hundred beautiful color images and engage not only with issues in design, but also the concerns of urban communities. The editors have put together a comprehensive guide for anyone concerned with improving or building plinths, including planners, building

owners, property and shop managers, designers, and architects.

Wheeler, Timothy Beatley, 2014-10-03 Building on the success of its second edition, the third edition of the Sustainable Urban Development Reader provides a generous selection of classic and contemporary readings giving a broad introduction to this topic. It begins by tracing the roots of the sustainable development concept in the nineteenth and twentieth centuries, before presenting readings on a number of dimensions of the sustainability concept. Topics covered include land use and urban design, transportation, ecological planning and restoration, energy and materials use, economic development, social and environmental justice, and green architecture and building. All sections have a concise editorial introduction that places the selection in context and suggests further reading. Additional sections cover tools for sustainable development, international sustainable development, visions of sustainable community and case studies from around the world. The book also includes educational exercises for individuals, university classes, or community groups, and an extensive list of recommended readings. The anthology remains unique in presenting a broad array of classic and contemporary readings in this field, each with a concise introduction placing it within the context of this evolving discourse. Whose Public Space? Ali Madanipour, 2010-01-21 Public spaces mirror the complexities of urban societies: as historic social bonds have weakened and cities have become collections of individuals public open spaces have also changed from being embedded in the social fabric of the city to being a part of more impersonal and fragmented urban environments. Can making public spaces help overcome this fragmentation, where accessible spaces are created through inclusive processes? This book offers some answers to this question through analysing the process of urban design and development in

international case studies, in which the changing character, level of accessibility, and the tensions of making public spaces are explored. The book uses a coherent theoretical outlook to investigate a series of case studies, crossing the cultural divides to examine the similarities and differences of public space in different urban contexts, and its critical analysis of the process of development, management and use of public space, with all its tensions and conflicts. While each case study investigates the specificities of a particular city, the book outlines some general themes in global urban processes. It shows how public spaces are a key theme in urban design and development everywhere, how they are appreciated and used by the people of these cities, but also being contested by and under pressure from different stakeholders.

The Pre-Fabrication of Building Facades Vitor Abrantes, Bárbara Rangel, José Manuel Amorim Faria, 2016-08-24 This book compares two buildings with different technologies and distinct environment from the combined viewpoints of civil engineering and architecture. The first is the most recent building of Columbia University in New York, the Northwest Science Building, a project designed by Rafael Moneo and Dan Brodtkin of Ove Arup. The second one is the Burgo Tower in Oporto, by Eduardo Souto Moura and Rui Furtado of AFA, a building that brings a new perspective to the use of prefabrication technologies with local traditional construction systems. With the detailed analyses of recognized researchers in civil engineering and architecture, this book is a reflection upon the problems and solutions in the design and construction process of a prefabricated building system. This volume, like those to follow, brings together, building research and building design practice to enhance the knowledge of complementarity areas involved in construction, engineering and architecture. This is the first book in a new series Building Research: Design, Construction and Technologies which aims to bridge scientific research and professional practice to understand the Building Design problems. In each edition, one or two case studies (recognized buildings in the international design panorama) are analyzed with their authors to assess the design process and the construction development. To understand the problems involved, researchers, engineers and architects, are asked to contribute to this analysis with essays on building research issues, as building technology, construction management, acoustics, maintenance or prefabrication.
