Design Computing and Cognition '12 John S. Gero, 2014-09-03 Design thinking, the label given to the acts of designing, has become a paradigmatic view that has transcended the discipline of design and is now widely used in business and elsewhere. As a consequence there is an increasing interest in design research. This is because of the realization that design is part of the wealth creation of a nation and needs to be better understood and taught. The continuing globalization of industry and trade has required nations to re-examine where their core contributions lie if not in production efficiency. Design is a precursor to manufacturing for physical objects and is the precursor to implementation for virtual objects. At the same time, the need for sustainable development requires the design of new products and processes, which feeds a movement towards design innovations and inventions. The papers in this volume are from the Fifth International Conference on Design Computing and Cognition (DCC'12) held at Texas A & M University, USA. They represent the state-of-the-art of research and development in design computing and design cognition. They are of particular interest to researchers, developers and users of advanced computation in design and those who need to gain a better understanding of designing.

Experiencia del proceso de diseño, del aula a la praxis y de la praxis al aula Cecilia Ramírez León, 2021-06-02 El presente trabajo registra la sistematización de una experiencia de diseño de producto, con el propósito de extraer aprendizajes que faciliten, en el aula, la comprensión y la explicación de las lógicas y las particularidades del proceso de diseño de producto. Este propósito, supone atender las pautas de la transposición didáctica, entendida como la necesaria transformación que sufre el saber especializado para poder ser enseñado; e igualmente, supone atender pautas de la vigilancia epistemológica, entendida como la mirada atenta, ante la eventual distancia entre el saber especializado y el saber enseñado. Con esta orientación, la recuperación y la reconstrucción de la experiencia mencionada, pretendió responder los interrogantes ¿Cómo reducir las distancias entre el saber a enseñar y el saber enseñado, referido al proceso de diseño de producto? ¿Cómo reducir las distancias entre la teoría y la práctica, en la enseñanza del proceso de diseño? Los resultados de este estudio, pueden ser útiles para estudiantes de diseño industrial, para semilleros de investigación e investigadores, para docentes de otras áreas del saber y para la academia misma. A los estudiantes, les ilustra una opción para llevar a cabo un proyecto de su disciplina fuera de la academia; a los semilleros de investigación e investigadores, les sugiere una ruta para la aplicación de la metodología de sistematización de experiencias; a los docentes de otras áreas del saber, les sugiere una posibilidad en la

búsqueda de la aproximación de la teoría con la práctica. Al programa académico, le proporciona elementos de vigilancia epistemológica, cuyos resultados contribuyen en la aproximación del saber a enseñar con el saber enseñado y, con ello igualmente, le suministra elementos para prevenir irregularidades en la transposición didáctica, concretamente en la enseñanza del proceso de diseño. En síntesis, este estudio puede contribuir en la calidad académica de un programa de estudios.

Competencias del diseñador industrial Cecilia Ramírez León, 2020-05-04 El Consejo Privado de Competitividad, como ente articulador entre el sector público, el sector privado, la academia y otras organizaciones interesadas en la promoción de la competitividad y las políticas públicas relacionadas, realiza y publica anualmente el Informe Nacional de Competitividad, (INC). Esta publicación proporciona información sobre el estado de algunas áreas consideradas críticas a efectos de la competitividad en el país, tales como eficiencia del Estado, justicia, corrupción, logística e infraestructura, transporte y facilitación del comercio, energía, educación, salud, mercado laboral, pensiones, comercio exterior, sistema tributario, financiación empresarial, ciencia, tecnología e innovación, economía digital y crecimiento verde. En cada área relaciona un diagnóstico sobre el estado del país e igualmente una serie de recomendaciones específicas, con el propósito de contribuir al avance acelerado en cada tema. Particularmente, con respecto al área de la educación, y más concretamente a la Educación Superior, el INC 2018 revela que únicamente el 13.9% de los programas de pregrado y posgrado de Educación Superior del país cuentan con acreditación de alta calidad (CNA, 2018). Agrega que en Colombia el 42 % de los empresarios, 15 % menos que en el lapso 2014-2018, reporta inconvenientes para llenar sus puestos vacantes debido, entre otras razones, a la falta de competencias y de experiencia de los aspirantes (Manpower Group, 2018). No obstante, es una proporción más alta que en otros países de la región, cuyos empresarios manifiestan tener menores dificultades para el reclutamiento del talento humano requerido.

Transdisciplinary Lifecycle Analysis of Systems R. Curran, N. Wognum, M. Borsato, 2015-07-15 Concurrent Engineering (CE) is based on the premise that different phases of a product's lifecycle should be conducted concurrently and initiated as early as possible within the Product Creation Process (PCP). It has become the substantive basic methodology in many industries, including automotive, aerospace, machinery, shipbuilding, consumer goods, process industry and environmental engineering. CE aims to increase the efficiency of the PCP and reduce errors in later phases while

incorporating considerations for full lifecycle and through-life operations. This book presents the proceedings of the 22nd ISPE Inc. (International Society for Productivity Enhancement) International Conference on Concurrent Engineering (CE2015) entitled 'Transdisciplinary Lifecycle Analysis of Systems', and held in Delft, the Netherlands, in July 2015. It is the second in the series 'Advances in Transdisciplinary Engineering'. The book includes 63 peer reviewed papers and 2 keynote speeches arranged in 10 sections: keynote speeches; systems engineering; customization and variability management; production oriented design, maintenance and repair; design methods and knowledge-based engineering; multidisciplinary product management; sustainable product development; service oriented design; product lifecycle management; and trends in CE. Containing papers ranging from the theoretical and conceptual to the highly pragmatic, this book will be of interest to all engineering professionals and practitioners; researchers, designers and educators.
