*Cognitive Rehabilitation in Old Age* Robert D. Hill, Lars Backman, Anna Stigsdotter-Neely, 2000-04-13 Cognitive deficits are part of the normal aging process and are exacerbated by various diseases that affect adults in old age, such as dementia, depression, and stroke. A significant scientific and social effort has been expended to evaluate whether cognitive deficits can be remedied through systematic interventions. The editors, as well as the chapter authors, represent a variety of viewpoints that span theory as well as practice. Overall, they aim to address concepts in cognitive rehabilitation that are useful in intervention research -- research which examines problems and issues in normal and pathological aging -- and focusing on the application of cognitive training strategies in natural settings. Thus, the book is grounded in contemporary theory in cognitive aging and is applicable to both the practicing clinician as well as the researcher. It is organized into four sections. The first highlights prominent theoretical principles; the second looks at cognitive rehabilitation strategies in normal aging; the third examines the interplay between lifestyle patterns and cognitive function through applying a broad definition of lifestyle choices; and the fourth focuses on rehabilitation strategies that address issues in pathological (or diseased) aging.

Contemporary Intellectual Assessment Dawn P. Flanagan, Erin M. McDonough, 2022-12-05 In one volume, this authoritative reference presents a current, comprehensive overview of intellectual and cognitive assessment, with a focus on practical applications. Leaders in the field describe major theories of intelligence and provide the knowledge needed to use

the latest measures of cognitive abilities with individuals of all ages, from toddlers to adults. Evidence-based approaches to test interpretation, and their relevance for intervention, are described. The book addresses critical issues in assessing particular populations--including culturally and linguistically diverse students, gifted students, and those with learning difficulties and disabilities--in today's educational settings--

*Improving Human Learning in the Classroom* George R. Taylor, Loretta MacKenney, 2008-10-03 Improving Human Learning in the Classroom provides a functional and realistic approach to facilitate learning through a demonstration of commonalities between the various theories of learning. Designed to assist educators in eliciting students' prior knowledge, providing feedback, transfer of knowledge, and promoting self-assessment, Taylor and MacKenney provide proven strategies for infusing various learning theories into a curriculum, guiding educators to find their own strategies for promoting learning in the classroom. Both quantitative and qualitative research methods investigate learning theories and reforms in education. Quantitative data sources build the theoretical framework for educating the student, as well as developing strategies for closing the achievement gap. Taylor and MacKenney fuse personal experiences with solid strategies for human learning.

Higher Stages of Human Development Charles Nathaniel Alexander, Ellen J. Langer, 1990 Can significant advances in development occur after adolescence? What are the highest possible states or stages of human development and how can they be realized? These and related critical issues are addressed in this volume by leading researchers and theorists in adult development. How we conceive of the endpoint, or highest state of development is crucial because it shapes our understanding of the direction, possibilities, and mechanisms of human growth. Even a decade ago, most psychologists believed that qualitative advances in development did not occur after adolescence. Based on recent research on adults, however, psychologists now question whether growth of fundamental human capacities necessarily culminates prior to adulthood. This new volume explores a variety of endpoints beyond the ordinarily proposed limits of human development. In

addition to describing advanced forms of cognitive functioning , contributors also discuss other domains integral to adult growth--including affective, moral, self, and consciousness development.

Learning and Cognition Michael E. Martinez, 2010 What is the design of the mind? What does that design imply for education? This comprehensive and engaging introduction to human learning and its applications to education focuses on these vital questions by exploring the theories of knowledge, complex cognition, and human intelligence, presenting a clear and interesting overview of the human mind through multiple theoretical lenses. The author delineates how the mind has a clear design, or architecture, that explains simple acts of memory and complex cognition, to highly creative acts and leaps of scientific or artistic insight. Topics covered throughout the text include: memory, motivation, cognitive development, the brain, and intelligence. Unique to this text, the author has provided an interdisciplinary chapter dedicated to theories of knowledge, extended coverage of expert-novice differences and talent development, and a chapter devoted to intelligence. Readers will appreciate special features like Learning Strategies which cover specific application of the theories to classroom practice, and Interest Magnets which explore fascinating topics such as photographic memory, sleep learning, and Einstein's brain. Written like a narrative, *Learning and Cognition: The Design of the Mind* will delight its readers' interest and attention as they learn about the theories of human learning and cognition and the improvement of the mind through education.
