**Capturing Value Increase in Urban Redevelopment** Demetrio Muñoz Gielen,2010 Everyone would agree that urban development, especially when involving the building of residential areas, should be accompanied by sufficient and good public infrastructure and facilities. We all want neighbourhoods with the necessary roads, green areas, social facilities, affordable housing and public spaces of high quality. At the same time, nowadays, governments are facing severe cuts in public expenditure. So who is going to pay for all that quality? In the Netherlands and in many other countries, achieving these public goals has become a problem, especially in the regeneration of deteriorated inner-city sites. This book offers insight in how the economic value increase that arises from urban development can serve to finance the quality we want, without the need for public subsidies. The findings and recommendations made in this book focus on Western Europe, mainly on successful and alternatively less successful recent experiences in Spain, England and the Netherlands. Public bodies can use the recommendations to create the necessary conditions to improve the involvement of property developers and landowners in the financing of infrastructure and facilities. Property developers and landowners can find formulas for private-public partnership that can lead to lower development costs and risks, allowing them to pay for good infrastructure and facilities while maintaining profitability. Scholars will find here the theoretical backgrounds for this relevant topic. The author has both an academic and a professional background in the practice of urban development.

*Urban Redevelopment* Barry Hersh,2017-08-29 Urban redevelopment plays a major part in the growth strategy of the

modern city, and the goal of this book is to examine the various aspects of redevelopment, its principles and practices in the North American context. *Urban Redevelopment: A North American Reader* seeks to shed light on the practice by looking at both its failures and successes, ideas that seemed to work in specific circumstances but not in others. The book aims to provide guidance to academics, practitioners and professionals on how, when, where and why, specific approaches worked and when they didn't. While one has to deal with each case specifically, it is the interactions that are key. The contributors offer insight into how urban design affects behavior, how finance drives architectural choices, how social equity interacts with economic development, how demographical diversity drives cities' growth, how politics determine land use decisions, how management deals with market choices, and how there are multiple influences and impacts of every decision. The book moves from the history of urban redevelopment, The City Beautiful movement, grand concourses and plazas, through urban renewal, superblocks and downtown pedestrian malls to today's place-making: transit-oriented design, street quieting, new urbanism, publicly accessible, softer, waterfront design, funky small urban spaces and public-private megaprojects. This history also moves from grand masters such as Baron Haussmann and Robert Moses through community participation, to stakeholder involvement to creative local leadership. The increased importance of sustainability, high-energy performance, resilience and both pre- and post-catastrophe planning are also discussed in detail. Cities are acts of man, not nature; every street and building represents decisions made by people. Many of today's best recognized urban theorists look for great forces; economic trends, technological shifts, political movements and try to analyze how they impact cities. One does not have to be a subscriber to the great man theory of history to see that in urban redevelopment, successful project champions use or sometimes overcome overall trends, using the tools and resources available to rebuild their community. This book is about how these projects are brought together, each somewhat differently, by the people who make them happen.
