Radicalizado Cory Doctorow, 2022-09-05 'Radicalizado' son cuatro novelas de ciencia ficción urgentes sobre el presente y el futuro de Estados Unidos en un solo libro. Contadas a través de una de las voces del género más en boga de nuestra generación, 'Radicalizado' es una oportuna colección compuesta por cuatro novelas de ciencia ficción conectadas por visiones sociales, tecnológicas y económicas de la actualidad y de lo que podría ser Estados Unidos en un futuro cercano. 'Pan no autorizado' es una historia sobre la inmigración, la toxicidad de la estratificación económica y tecnológica, y los jóvenes y los oprimidos que luchan contra todo pronóstico para sobrevivir y prosperar. En 'Minoría Modelo', una figura similar a la de Superman intenta rectificar la corrupción de las fuerzas policiales que durante mucho tiempo creyó erróneamente que protegían a los indefensos... sólo para descubrir que sus esfuerzos afectan negativamente a sus víctimas. 'Radicalizado' es la historia de un levantamiento violento en la dark web contra las compañías de seguros, contada desde la perspectiva de un hombre desesperado por conseguir financiación para un medicamento experimental que podría curar el cáncer terminal de su esposa. La cuarta historia, 'La máscara de la muerte roja', se remonta al libro 'Walkaway' de Doctorow, abordando cuestiones de supervivencia frente a la comunidad.

DIY Lithium Batteries Grayson Sissney,2018-04-07 Batteries have become such a part of our everyday lives that we do not notice them anymore, yet they serve essential functions. Think about the battery that is keeping your phone function or the battery in your laptop that allows you to work at remote locations. Electric bikes, hoverboards, digital cameras and even some types of vehicles rely on lithium batteries to power their electronics in the modern-day world. The problem is, lithium battery packs can be quite expensive, usually going for at least over \$200 and they are obviously not tailor-made to fit your particular demands. Deciding to build your own DIY lithium battery pack is a great decision, and picking up this book tells me that you are interested in doing this. In this guide, I cover everything you need to know about building custom, tailor-made lithium battery packs. You decide what you want; then you build it. By choosing the particular specifications of a battery pack yourself, you can ensure that the pack can be customized toward the requirements of the project you are working on. I start my guide by telling you more about the process of building a lithium battery pack, including what you can do with such a pack and where they can be used. I also cover the basics of the different lithium battery types that you will find on the market today and point out which ones are preferred over the others, as well as why they are the preferred options. In addition to explaining all the terminology and other aspects there are to know about the process of building a DIY lithium battery pack, I also provide a complete step-by-step guide that tells you how you can plan the layout of your first lithium battery pack, how to find the right material and tools that will help you build a working, high-quality battery pack, and I also cover the process of installing a battery management system, an essential part of a battery pack that lets you effectively charge and discharge the device without causing an imbalance in the capacity or charge rate of any batteries included in the pack. Another relevant section covered in my guide is the safety guidelines that surround the building of your

own DIY lithium battery pack. These safety guidelines should not be taken lightly, as potential hazards have occurred in the past with people who worked with lithium errors. Even though most hazards are not considered potentially harmful and usually only includes poor performance of the battery cell that has been affected, imbalances in the charge and discharge of these battery cells could potentially lead to more serious complications, such as the batteries exploding or catching on fire.

Lithium-Ion Cells Yury Koshtyal ,Alexander Rumyantsev, 2024-12-24 A large quantity of articles and books have been published on the designated topics. However, most of the literary sources describe the results of scientific articles on the synthesis and study of perspective materials; reveal circuit and design solutions for constructing control systems and manufacturing batteries; and are educational materials. At the same time, a small part of the published sources includes the following: descriptions of materials produced industrially and used in the LIC manufacturing process; demonstrations of the industrially produced LIC energy and power parameters; analysis of the characteristics of manufactured miniature lithium-ion cells, solid-state LICs, lithium metal cells, and all-solid-state cells; as well as others. Considering the popularity of the discussed topics, one can hope to find detailed information on the Internet. Indeed, modern search engines make it possible to locate a sufficiently large number of relevant documents. However, while conducting such research, we encountered the

following challenges: the data are somewhat fragmented, and their systematization and structuring are required; search results do not always meet search queries. For instance, data that were relevant to the topic were found, but they did not match the query; as accumulated data grow, the search time for new information extends; the choice of search engine and location (different countries) affects search results; the data are not indexed in search engines, although the correct keywords and website were requested; the information disappears due to website updates; and the found data require additional processing. For example, many presentations show changes in the shape of the discharge curves depending on the discharge current strength. In addition, however, Ragone plots are necessary for a correct comparison, and therefore, the mathematical processing of presented results is required. Thus, this book was written to systematize and structure information on industrially produced materials for LIC manufacturing and industrially produced and promising LICs (and lithium metal rechargeable cells) for various applications.
