

Euphrates And Tigris River

J. Rzóska

The Tigris & Euphrates River [i.e. Rivers] Shane Mountjoy, 2005 Discusses the two Fertile Crescent rivers, including their significant role in all periods of the history of the region, their geographical features, and the modern-day environmental and political issues surrounding their use.

Tigris and Euphrates Rivers: Their Environment from Headwaters to Mouth Laith A. Jawad, 2021-09-12 The system of the Tigris-Euphrates Rivers is one of the great river systems of southwestern Asia. It comprises the Tigris and Euphrates Rivers, which follow roughly parallel courses through the heart of the Middle East. The lower portion of the region that they run through is known as Mesopotamia, was one of the cradles of civilisation. There are several environmental factors that govern the nature of the two rivers and shape the landscape the two rivers running through. Geological events create rivers, climate monitor the water supply, the surrounding land influences the vegetation and the physical and chemical features of water. The Tigris-Euphrates system runs through the territory of four countries, Iraq, Iran, Turkey and Syria. Therefore, any scientific approach to the environment of these two rivers should include the natural history events in these countries. The book *Tigris and Euphrates Rivers: Their Environment from Headwaters to Mouth* will be divided into nine parts. These parts deal with the issues of the environment, the status of the flora and fauna, the abiotic aspects, ecology, hydrological regime of the two rivers, the biotic aspects. Water resources, stress of the environment, conservation issues. Since the book of Julian Rzóska *Euphrates and Tigris Mesopotamian Ecology and Destiny* in 1980, no book or major reference has been published that includes between its cover the facts and information that the present book will present. Therefore, the importance of the present book falls in stating the present status of the environment of the two rivers and the comparison of their environment between now and that of 37 years ago as given by J. Rzóska (1980). The recent studies showed that there are a large number of natural and political events that happened within the last three decades in the area of the Tigris-Euphrates river system that for sure have done a great change to the environment of the two rivers and consequently changing the biological and non-biological resources of the two rivers. This book will be a reference book to both Academic and students across the Middle East in different disciplines of knowledge to use in their researches on Tigris-Euphrates river system. The scholars interested in this area will use this book as a guide to compare this freshwater system with other areas in Asia and the world.

Building a Regime for the Waters of the Euphrates-Tigris River Basin Aysegul Kibaroglu, 2021-10-18 Due to a variety of reasons, water resources on the globe are becoming scarcer. The degree of water scarcity and its political, economic and social implications are felt more severely in regions like the Middle East. The Euphrates-Tigris river basin is one of the major sources of water, but also a source of tension in the region. Unless cooperation is achieved among the riparian countries, namely Turkey, Syria and Iraq, in the areas of management, allocation and utilisation of the waters of the Euphrates-Tigris basin, growing scarcity may result not only in conflict, but also in further devastation of an extremely vital source. Recently, water has become a subject matter of international law, and formal and informal deliberations in international conferences have produced general principles and norms for using and managing water resources effectively. Hence, this book is an attempt to put together a meaningful set of principles, norms, rules, and decision-making procedures of a region-specific regime framework for effective utilisation of the waters of the Euphrates-Tigris river basin with a view to promoting cooperation among the riparian countries.

The Tigris and Euphrates Gary G. Miller, Gary Miller, 2010 An exploration of the Tigris and Euphrates Rivers that discusses their geologic histories and natural resources, and explores how they are used by humans and efforts to protect them.

The Tigris and Euphrates Rivers Earle Rice, 2012-09-30 There are few rivers in the world which can boast a history as long and as colorful as the Tigris and Euphrates. Known in ancient times as Mesopotamia, the region between the two rivers and surrounding them is called the "Cradle of Civilization." Sumer, the world's first major civilization, originated and grew up on the banks of the two rivers because of the fertile soil the rivers helped to produce. Several other important civilizations, such as Babylonia and Assyria, followed Sumer in succeeding centuries. Many of the world's most important inventions, such as writing, originated here. But all is not well with the rivers today. Several countries compete for the precious, life-giving water of the Tigris and Euphrates. Climate change threatens to reduce the amount of this water.

Peaceful Uses of International Rivers: The Euphrates and Tigris Rivers Dispute Hilal Elver, 2021-10-25 This book by a renowned environmental lawyer and scholar proposes a regime scheme that is not only based soundly on existing treaties concerning access rights to fresh water, but also on the human rights of persons dependent on rivers and lakes for water and food. Focusing on the Tigris-Euphrates basin, which is shared by Iraq, Syria, and Turkey, Professor Elver explores the transnational arrangements among these three countries for the allocation of river resources. The author clearly exposes the potential for conflict, and sets forth the role that international law can play in resolving such conflict and protecting the human rights of local populations. Published under the Transnational Publishers imprint.

Two Rivers Entangled Dale J. Stahl Ph.D., 2026-01-06 During the twentieth century, the Tigris and Euphrates rivers underwent a profound physical transformation, one that mirrored the region's political shift from imperial rule to nation-

state. Here, Iraq, Syria, and Turkey took shape in the wake of the Ottoman Empire, and the two rivers became sites of economic development planning and large-scale environmental engineering. It is a modern conceit that industrial, technological societies transcend ecological change, that technology and ecology operate separately. With this book, Dale J. Stahl instead centers riverine ecologies within the context of social and political projects and shows how natural processes encounter human intentions to manage, control, or modernize. Weaving imperial and national histories with ecological ones, *Two Rivers Entangled* undermines familiar accounts of the invention of states, the advance of nations, and the triumphs of technical expertise. Stahl entangles a wide range of human and nonhuman actors—knitting together the movement of engineers and bureaucrats with that of salt particles, linking the disappointment of revolutionaries to the dissolution of unreliable rock, and following the flow of water over embankments and into poetry. Ultimately, this book offers an alternative account of twentieth-century Middle Eastern history, one subject as much to ecological change as to human visions and intentions.

The Expedition for the Survey of the Rivers Euphrates and Tigris Francis Rawdon Chesney, 1850

Civilization's Drying Cradle United States United States Army War College, 2014-10-30 The finite water supply of the Tigris and Euphrates rivers is increasingly imbalanced with the demands of Turkey, Syria, and Iraq. Turkey's GAP project, which will eventually include 22 dams and 19 hydroelectric plants in the upper Tigris-Euphrates basin, gives Turkey tremendous ability to control both rivers, and provides significant political and economic influence over Syria and Iraq. The countries have failed to reach a water-sharing agreement, and Turkish and Syrian stockpiling to fill reservoirs nearly led to military conflicts with Iraq in 1974 and 1990. Recent drought-induced low river flows have led to accusations that Turkey is holding back more than its fair share of water. This paper details the nature of water shortages in the Tigris and Euphrates basin, discusses relationships between upstream-downstream riparian states, analyzes whether international water laws are sufficiently developed to influence Turkey, Syria, and Iraq toward a long-term solution, and explains the importance of a U.S. role, with policy options for promoting equitable water-sharing between these states. Lastly, this paper describes steps Iraq must take to improve its water security, with or without a water-sharing agreement with Turkey and Syria.

The Régime of the Rivers, Euphrates and Tigris Michael George Ionides, 1937

Rivers of the Sultan Faisal H. Husain, 2021-03-05 In the early sixteenth century, a series of military campaigns between the Mediterranean Sea and Persian Gulf brought the entirety of the Tigris and Euphrates rivers under Ottoman control. This book offers a history of this rare political unification of the longest rivers in West Asia and its impact on the Ottoman state,

provincial society, and the environment.

Euphrates and Tigris, Mesopotamian Ecology and Destiny J. Rzóska, 2012-12-06 Scope and limitations of this book I am trying here to present the natural history of a land largely created and dominated by two great rivers, the Euphrates and Tigris. All rivers have two main functions, quite different from lakes; they transport water and eroded material sometimes over large distances. The astute Greeks, who penetrated here in the 4th century B.C., called the land Mesopotamia, an apt name; it is the only region in the Near East, except Egypt, having the benefit of large rivers. Another name coined in antiquity was 'Fertile Crescent', stretching from Egypt to present day Iraq; Herodotus marvelled at the fertility of the soils, the abundance of water and the magnificent cities of Mesopotamia. Thus a further role of some great rivers is recognized as foci of human development. The desire to collate this book arose from a similar motif as in the Nile book (1976), the intricate connection between man and rivers.

Global Security Watch—Turkey Mustafa Kibaroglu, Aysegul Kibaroglu, 2009-03-05 There are a number of factors that elevate Turkey's status in the international arena and make it an important regional actor. As a longstanding member of the western world, a candidate country to the European Union, a staunch ally of the United States, and a frontline state in the fight against terrorism, Turkey plays a key, yet often overlooked, role in world affairs. Proper understanding of how decisions regarding foreign and security issues are being taken within the state apparatus in Turkey is crucially important, especially when unexpected developments take place. Mustafa and Aysegul Kibaroglu examine the issues that drive Turkish foreign policy decisions in this crucial region. This reference work chronicles the factors which have shaped the mindsets of the makers of Turkey's foreign and security policies from the foundation of the Republic in 1923. The authors provide not only meaningful explanations of past events, but also useful insights into the current issues at the center of Turkish regional and foreign policies. They offer a concise overview of Turkish foreign policy and assess the position of the nation within the context of the war on terror, globalization, and more. Their narrative is supplemented by biographies of key decision makers, policies, and documents that illustrate the choices that comprise Turkey's past and present.

The Regulation of the Non-navigational Use of the Euphrates and Tigris River System Nicolas Bremer, 2017 This book analyzes the distribution and utilisation of the water of the Euphrates and Tigris river system from the perspective of international law. It shows which international treaties and provisions of international customary law regulating the non-navigational use of international freshwater systems are binding for the riparian states, Iraq, Syria and Turkey, and how the distribution and utilisation of the waters of the river system are governed by these. This study uses two Turkish dams-the Atatürk Dam on the Euphrates and the Ilisu Dam on the Tigris-to illustrate which provisions of international law are binding and what problems will arise concerning the application of these principles. Turkey's Water Policy as Part of the Political Strategy Hayk Gabrielyan, 2024-03-26 This book investigates water issues in the Euphrates-Tigris basin between Turkey, Syria and Iraq (Iran). It presents the importance of water in the world and especially for the countries of the Euphrates-Tigris basin, the water resources of the three riparian countries, their advantages and disadvantages, the amount of reservoir construction in the three riparian countries, their water disagreements and conflicts, international water law. The importance of water in the Ottoman period is presented, the evolution of Turkey's water policy in the 20th and 21st centuries, the connection and interdependence of Turkey's water policy with its foreign and domestic policies are shown in detail. Separate reference is made to non-state actors, such as the Kurds of Turkey, Syria and Iraq. The work emphasizes that Turkey is a unique country in the world with its water policy in the Euphrates-Tigris basin: no other country is able to use water in such a multi-purpose way to achieve various goals.
