

The Definition Of Philosophy

H Kauffman

Towards the Definition of Philosophy Martin Heidegger, 2002-07-04 Towards the Definition of Philosophy brings together - in their first English translation - two of Heidegger's seminal lecture courses, The Idea of Philosophy and the Problem of Worldview and Phenomenology and Transcendental Philosophy Value, as well as the lecture, On the Nature of the University and Academic Study. The volume also includes a short glossary.

A Dictionary of Philosophy Alan Robert Lacey, 1986 Explains the terminology of philosophy with an emphasis on bringing out the general flavour and importance of terms rather than giving over-concise definitions which may mislead.

Concrete Critical Theory: Althusser's Marxism William S. Lewis, 2021-12-06 Taking an analytic and historical approach, this work develops and defends Althusserian critical theory. This theory, it is argued, produces knowledge of how a particular class of people, in a particular time, in a particular place, is dominated, oppressed, or exploited. Moreover, without relying on a general notion of human emancipation, concrete critical theory can suggest political means for the alleviation of these conditions. Because it puts Althusser's ideas in dialogue with contemporary social science and philosophy, the book as a whole makes contributions to Althusser studies, to Anglo-American political philosophy, and to current debates in the philosophy of the social sciences.

The Philosophical Review , 1896

African Philosophical Currents John Murungi, 2018-04-17 The history of the human world has reached a stage where no philosophical community can any longer philosophize in isolation from other philosophical communities. The African philosophical community is not an exception and neither is any other philosophical community. There is a widespread notion in the West that philosophy originated in Greece and found its way throughout Europe, from where it migrated to Africa. This book argues that Philosophy did not migrate to African from anywhere but that it is radically native to all communities. The chapters cover the erasure of African philosophy, African philosophical departures, the threat that Christianity has posed to African philosophy, African legal philosophy, African musical aesthetics and connections with classical philosophy. Arguing that the landscape of philosophy has a place not only for Africans but also for all human beings and that African philosophers are among the architects of this landscape, this book is an important read for scholars and students of African philosophy.

A History of Philosophy Wilhelm Windelband, 1898 Three tasks direct the author's work: to establish from available sources the circumstances in life, the mental development, and the doctrines of individual philosophers; to reconstruct from these facts the genetic process, so that the effect of these factors upon each philosopher's doctrine can be determined; to determine the overall value in the history of philosophy of the doctrines considering their origin.

The Best Writing on Mathematics 2010 Mircea Pitici, 2021-09-14 The year's most memorable writing on mathematics This anthology brings together the year's finest writing on mathematics from around the world. Featuring promising new voices alongside some of the foremost names in mathematics, *The Best Writing on Mathematics* makes available to a wide audience many articles not easily found anywhere else—and you don't need to be a mathematician to enjoy them. These writings offer surprising insights into the nature, meaning, and practice of mathematics today. They delve into the history, philosophy, teaching, and everyday occurrences of math, and take readers behind the scenes of today's hottest mathematical debates. Here readers will discover why Freeman Dyson thinks some mathematicians are birds while others are frogs; why Keith Devlin believes there's more to mathematics than proof; what Nick Paumgarten has to say about the timing patterns of New York City's traffic lights (and why jaywalking is the most mathematically efficient way to cross Sixty-sixth Street); what Samuel Arbesman can tell us about the epidemiology of the undead in zombie flicks; and much, much more. In addition to presenting the year's most memorable writing on mathematics, this must-have anthology also includes a foreword by esteemed mathematician William Thurston and an informative introduction by Mircea Pitici. This book belongs on the shelf of anyone interested in where math has taken us—and where it's headed.

The Ethical Foundations of Criminal Justice Richard A. Spurgeon Hall, Carolyn Brown Dennis, Tere L Chipman, 1999-09-24 Ideal for anyone involved in the study of criminal justice, this book acquaints students with the

philosophical concepts upon which ethical theory is based. It applies these ideas to specific issues and dilemmas within the criminal justice system. Its ultimate goal is to acquaint students with basic concepts of ethics in criminal justice and to train the mind to solve moral issues independently. The Ethical Foundations of Criminal Justice offers a comprehensive definition of ethics, and elucidates its unique language and logic. The book explores the major ethical theories, with extensive discussion of authorities like Kant, Aristotle, Mill, and Hobbes. Chapters investigate normative ethics, teleological theories, deontological theories, and the alternative theories of ethics. The author exhibits the practice of these theories in actual matters of rights, the law, and the behavior of the courts. This book addresses ethics in the context of civil liability, police corruption, and abuse of police power, and includes numerous case studies and references to other relevant works. Criminal justice majors, criminology and law school students, and even police academy cadets will find this text an invaluable source of information both for academic studies and real-world applications.

Jurisprudence or Legal Science Sean Coyle, George Pavlakos, 2005-05-31 Modern jurisprudence embodies two distinct traditions of thought about the nature of law. The first adopts a scientific approach which assumes that all legal phenomena possess universal characteristics that may be used in the analysis of any type of legal system. The main task of the legal philosopher is to disclose and understand such characteristics, which are thought to be capable of establishment independently of any moral or political values which the law might promote, and of any other context-dependent features of legal systems. Another form of jurisprudential reflection views the law as a complex form of moral arrangement which can only be analysed from within a system of reflective moral and political practices. Rather than conducting a search for neutral standpoints or criteria, this second form of theorising suggests that we uncover the nature and purpose of the law by reflecting on the dynamic properties of legal practice. Can legal philosophy aspire to scientific values of reasoning and truth? Is the idea of neutral standpoints an illusion? Should legal theorising be limited to the analysis of particular practices? Are the scientific and juristic approaches in the end as rigidly distinct from one another as some have claimed? In a series of important new essays the authors of *Jurisprudence or Legal Science* attempt to answer these and other questions about the nature of jurisprudential thinking, whilst emphasising the connection of such 'methodological' concerns to the substantive legal issues which have traditionally defined the core of jurisprudential speculation. The list of contributors includes R. Alexy, S. Coyle, J. Gorman, C. Heidemann, P. Leith, J. Morison, G. Pavlakos and V. Rodriguez-Blanco.
