Hunters, Fishers and Foragers in Wales Malcolm Lillie, 2015-07-31 Malcolm Lillie presents a major new holistic appraisal of the evidence for the Mesolithic occupation of Wales. The story begins with a discourse on the Palaeolithic background. In order to set the entire Mesolithic period into its context, subsequent chapters follow a sequence from the palaeoenvironmental background, through a consideration of the use of stone tools, settlement patterning and evidence for subsistence strategies and the range of available resources. Less obvious aspects of hunter-forager and subsequent hunter-fisher-forager groups include the arenas of symbolism, ritual and spirituality that would have been embedded in everyday life. The author here endeavors to integrate an evaluation of these aspects of Mesolithic society in developing a social narrative of Mesolithic lifeways throughout the text in an effort to bring the past to life in a meaningful and considered way. The term 'hunter-fisher-foragers' implies a particular combination of subsistence activities, but whilst some groups may well have integrated this range of economic activities into their subsistence strategies, others may not have. The situation in coastal areas of Wales, in relation to subsistence, settlement and even spiritual matters would not necessarily be the same as in upland areas, even when the same groups moved between these zones in the landscape. The volume concludes with a

discussion of the theoretical basis for the shift away from the exploitation of wild resources towards the integration of domesticates into subsistence strategies, i.e. the shift from food procurement to food production, and assesses the context of the changes that occurred as human groups re-orientated their socioeconomic, political and ritual beliefs in light of newly available resources, influences from the continent, and ultimately their social condition at the time of 'transition'.

Essays on the Prehistory of Maritime California Terry L. Jones, 1992 Changes through time in the archaeological record of coastal California illuminate complex relationships between human beings and a rich, diverse coastal biome. With a long and impressive history of coastal archaeology, California scholars have a substantial empirical research base from which to address broader issues within the increasingly specialized subfield of maritime anthropology. The 16 papers in this volume attempt to explain changes in coastal hunter-gatherer behavior through time. CORMORANTS DARTERS PELICANS Paul A. Johnsgard, 1993-05-17 Whether it is an elusive darter stalking its prey in a tropical swamp, a flock of cormorants cooperatively driving a frenzied school of fish into the shallows of a lake or river, or brown pelicans plummeting into the ocean, these ancient groups of web-footed birds in the order Pelecaniformes offer remarkable behavioral and structural diversity. As fish eaters, they are highly susceptible to poisons and serve as biological indicators for toxic materials. In this first worldwide survey of cormorants, darters, and pelicans, Paul A. Johnsgard provides a color illustration of nearly every species and a variety of anatomical drawings, and he summarizes the species' status and biology, including ecology, behavior, distribution, plumage, and morphology. The first section of the book focuses on comparative biology, including all 32 species of Cormorants and shags (Phalacrocoracidae), two species of darters (Anhingidae), and seven species of pelicans (Pelecanidae). The accounts cover species' phylogeny, taxonomy, zoogeography, comparative anatomy, behavior, reproductive biology, population and breeding dynamics, and conservation biology. Detailed line drawings of the heads of all species noting age or seasonal variations help the reader identify and distinguish between each species. The book also includes keys to each species and the origins of their scientific and vernacular names.
