Authentic University Lawrence Muganga Ph.D.,2022-08-22 Today's universities fail students, leaving them stranded in an alien world that differs markedly from the ivory tower institution that ostensibly molded them for the future. The Authentic University proposes to overcome the manifold shortcomings of the contemporary postsecondary school by offering an innovative education that corresponds to the realities of the modern era. This university blends three distinct concepts of student-centered education to provide students with a personalized learning experience that develops distinct skills and competencies required by today's employers. Students can save time, money, and effort while learning the information and applications that they want and need. Contained within the covers of this groundbreaking book lies a thorough description of everything that educational stakeholders must know about the Authentic University, including supporting literature and practical models alongside strategies for planning and implementation. The world has passed the university by and will not wait for education to keep pace with its ever-evolving information and communication technology situated in an increasingly entrepreneurial economy. We, as educational stakeholders, must meet the challenge of change in an urgent way. The first step toward bringing the university into the modern era begins with this book; the manual for a radically new type of education termed the Authentic University.

Library Data Darby Orcutt,2009-11-19 Numerical evidence is everywhere and how best to handle and leverage it is a growing concern in the academic world in general and the academic library world in particular. Libraries are not only storehouses and key contacts for library patrons in accessing numbers, but are also collectors and users of their own data, which is integral to the functioning of the library itself. The essays in *Library Data: Empowering Practice and Persuasion* focus on interpreting and using library-generated and outside data in support of data-driven practice and data-strengthened persuasion. The collection includes such topics as how to make data presentations appealing and effective; applying capital-budgeting models to libraries; and using data for evaluation and improvement of collections and services. Articles also cover specialized scenarios, including reference, collection development, serial acquisitions, institutional repositories, web site design, interlibrary loan, and bibliographic instruction.

Using the Internet for Active Teaching and Learning Steven C. Mills,2006 For courses in Computers in Education. Are you ready to make use of the power of the Internet to support your teaching? *Using the Internet for Active Teaching and*

Learning combines both theory and practice to introduce you to the Internet's potential as a teaching tool in your classroom. With student learning as its goal, the book is organized by its functions in the classroom—from communication to locating and evaluating information, publishing information, information problem-solving, cooperative problem-solving, inquiry and discovery, and online collaborations.
