Materiales de construcción AA. VV.,2007-11 Este volumen ofrece un completo retrato de los distintos materiales empleados en la construcción: piedras naturales y artificiales, hormigón, materiales cerámicos, materiales de aislamiento térmico y acústico, etc. Al principio del presente capítulo se tratarán los diferentes tipos de piedras naturales que se utilizan habitualmente en la construcción actual. Como se verá en la mayoría de los casos que se exponen, su uso se centra esencialmente en la fase de acabados de la obra. Aunque se trata de un material tradicional, es necesario conocer bien sus propiedades y en especial su comportamiento, por lo que a continuación se explicará cómo clasificar aquellas piedras naturales más utilizadas y distinguir las características físicas que las definen. Por otro lado, se hablará de aquellos materiales que se definen como piedras artificiales, que en la construcción actual constituyen una parte muy importante de los materiales utilizados, y en especial se expondrán cuáles son sus componentes básicos y sus propiedades.

Energía, Agua, Medioambiente, territorialidad y Sostenibilidad Xavier Elías Castells,2012-05-04 La actual crisis económica forzaré a plantear una reflexión sobre la matriz energética actual, su sostenibilidad y la necesidad de cambio de modelo para no tener que alterar en demasía el nivel de confort, variando muy poco los hábitos de vida. Esta obra aborda dicho problema en tres bloques claramente diferenciados, pero unidos por un mismo hilo conductor: la energía. En el primer bloque se analizan las causas del consumo energético. No se pone en cuestión si los actuales consumos de los españoles son necesarios o no, o si resultan elevados, pero sí que pueden y deben optimizarse. Este bloque se compone de: El modelo energético español. Aspectos ambientales y demográficos relacionados con la energía. Energía y transporte. La vivienda y el

confort. El segundo bloque intenta aportar soluciones a corto/medio plazo, de manera que en nuestra sociedad sea capaz de pasar de la incertidumbre a una sociedad que emplea la energía que precisa de manera limpia y sostenible. El bloque se compone de: Las energías renovables, y Biomasa y Bioenergía. En el último bloque se postulan y justifican las soluciones: Conclusiones. Energías renovables versus convencionales. Para establecer el nuevo modelo, se parte de un consumo eléctrico, para 2040, de 424,9 TWh/año, cifra que se justifica por el aumento demográfico, el incremento específico energético y un coeficiente reductor por eficiencia. El nuevo modelo energético postula que se puede llegar al 73,2% de generación a partir de fuentes renovables a un costo de generación muy inferior al actual. Al principio de cada capítulo aparecen unas conclusiones o puntos más destacados, de manera que se pueda llevar a cabo una lectura rápida del libro tan solo con los resúmenes iniciales.

Isla de calor urbana en ciudades del desierto continental Irene Marincic Lovriha,Laura Mercado Maldonado,2023 En el presente libro se habla de un fenómeno denominado isla de calor urbana. Las autoras describen minuciosamente las razones por las que se origina y detallan las múltiples consecuencias para los habitantes, las ciudades, el consumo eléctrico, el clima y la temperatura. Luego de un recorrido amplio para considerar los impactos de este fenómeno a escala local,

microescala y mesoescala, se aborda particularmente la isla de calor urbana en Hermosillo, Sonora, región para la cual se proponen estrategias de mitigación que exhortan a considerar el uso de vegetación, la distribución de espacios urbanos con base en la infraestructura y la geometría, y la elección materiales de construcción de poca absorción de calor.
