

Internet Encyclopedia Of Philosophy

Helen Laurence, William Miller

The Internet Encyclopedia of Philosophy, 2006 The Internet Encyclopedia of Philosophy was founded in 1995 for the purpose of providing detailed, scholarly information on key topics and philosophers in all areas of philosophy. Articles are currently from three sources: (1) original contributions by specialized philosophers around the Internet; (2) adaptations of material written by the editors for classroom purposes; and (3) adaptations from public domain sources (typically from two or more sources for per article). The IEP offers access to a keyword site search engine and is free of charge to all Internet users.

How to Think in Medicine Milos Jenicek,2018-08-06 Mastery of quality health care and patient safety begins as soon as we open the hospital doors for the first time and start acquiring practical experience. The acquisition of such experience includes much more than the development of sensorimotor skills and basic knowledge of sciences. It relies on effective

reason, decision making, and communication shared by all health professionals, including physicians, nurses, dentists, pharmacists, and administrators. *How to Think in Medicine, Reasoning, Decision Making, and Communications in Health Sciences* is about these essential skills. It describes how physicians and health professionals reason, make decision, and practice medicine. Covering the basic considerations related to clinical and caregiver reasoning, it lays out a roadmap to help those new to health care as well as seasoned veterans overcome the complexities of working for the well-being of those who trust us with their physical and mental health. This book provides a step-by-step breakdown of the reasoning process for clinical work and clinical care. It examines both the general and medical ways of thinking, reasoning, argumentation, fact finding, and using evidence. It explores the principles of formal logic as applied to clinical problems and the use of evidence in logical reasoning. In addition to outline the fundamentals of decision making, it integrates coverage of clinical reasoning risk assessment, diagnosis, treatment, and prognosis in evidence-based medicine. Presented in four sections, this book discusses the history and position of the problem and the challenge of medical thinking; provides the philosophy interfacing topics of interest for health sciences professionals including the probabilities, uncertainties, risks, and other quantifications in health by steps of clinical work; decision making in clinical and community health care, research, and practice; Communication in clinical and community care including how to write medical articles, clinical case studies and case reporting, and oral and written communication in clinical and community practice and care.
