The Making of Life of Pi Jean-Christophe Castelli, 2012-11-13 Diversely illustrated with 275 photographs and illustrations, The Making of Life of Pi tells the inside story of how renowned Academy Award-winning director Ang Lee brought Yann Martel's international bestseller to life as a 3-D film. With a rich, entertaining text and a wide variety of facts, anecdotes, visual portfolios, and sidebars sure to delight readers of all ages, The Making of Life of Pi follows the making of the film from pre-production through final cut. Of course, you'll meet Suraj Sharma, the sixteen-year-old unknown Indian high-school student who won the part of Pi although he had no acting experience and didn't even know how to swim—yet in the end performed all of his own stunts. You'll learn about the massive wave tank, custom-built for the film that replicated a vast, stormy ocean in all its moods, thanks to a complex and specially devised menu of wave and wind combinations, some really powerful machinery, and tons of water. You'll get to look inside the fifty-page fully illustrated survival guide that shipwreck survivor Steven Callahan created for Pi to consult on his raft. And you'll read about King, Themis, Minh, and Jonas, the four Bengal tigers used in the film—and discover how visual effects were able to create a seamless 3-D image of the tiger Richard Parker. A foreword by Yann Martel, an introduction by Ang Lee, and an incredible range of visual materials—fine art, vintage archival imagery, and commissioned portfolios by photographer Mary Ellen Mark and artist Alexis Rockman—supplement the film's storyboards, sketches, and stills, rounding out this highly experiential book for lovers of the novel and film viewers alike.

Ace the Thinking Skills Assessment Neel Burton, 2014-10-20 This book, written by an Oxford tutor and writer, covers all aspects of the Thinking Skills Assessment (TSA), including problem-solving, critical thinking, and the writing task. It should also prove useful for other aptitude tests such as the BioMedical Admissions Test (BMAT). The TSA is an admission test for an increasing number of courses at an increasing number of universities, including and originally Oxford and Cambridge. The emphasis of the TSA is very much on thinking skills, and the amount of knowledge required is minimal. This means that the best way to prepare is to develop your thinking skills by working through a large number of TSA-style questions, and the bulk of this book consists of three full-length mock papers, each followed by detailed explanations of the answers. You should look upon the TSA not only as a means to stand out from your competition, but also, and indeed mostly, as an opportunity to hone your thinking skills, which are going to be far more important to your future impact and wellbeing than any facts that you could ever learn. As BF Skinner once put it, e;Education is what survives when what has been learnt has been forgotten.e;

The Microeconomic Mode Jane K. Elliott, 2018-06-26 From *The Road to Game of Thrones*, across works as seemingly different as *Gone Girl* and *Saw*, literature, film, and television have become obsessed with the intersection of survival and choice. When the trapped rock-climber hero of *127 Hours* is confronted with self-amputation or death, it is only a particularly blunt example of an omnipresent set-up. In real-life settings or fantastical games, protagonists find themselves confronting extreme scenarios with life-or-death consequences, forced to make torturous either-or choices in stripped-down, brutally stark environments. Jane Elliott identifies and analyzes this new and distinctive aesthetic phenomenon, which she calls “the microeconomic mode.” Through close readings of its narratives, tropes, and concepts, she traces the implicit theoretical and political claims conveyed by this combination of abstraction and extremity. In the microeconomic mode, humans isolated from any forms of social organization operate within a mini-economy of costs and benefits, gains and losses, measured in the currency of life. Elliott reads the key concepts that emerge from this aesthetic—life-interest, sovereign capture, and binary life—in relation to biopolitics and natural law theory, becoming and the control society, and primitive accumulation in racial capitalism. The microeconomic mode interrogates the destruction of the liberal political subject, but what it leaves in its place is as disturbing as it is radically new. Going beyond the question of neoliberalism in literature, *The Microeconomic Mode* combines revelatory close readings of key literary and popular texts with significant theoretical interventions to identify how an aesthetics of choice has reshaped our contemporary understanding of what it means to be human.

Absolute Recoil Slavoj Žižek, 2015-10-06 A contemporary philosophical masterwork from “one of the world’s best-known public intellectuals ” (New York Review of Books) Philosophical materialism in all its forms – from scientific naturalism to Deleuzian New Materialism – has failed to meet the key theoretical and political challenges of the modern world. This is the burden of philosopher Slavoj Žižek’s argument in this pathbreaking and eclectic new work. Recent history has seen developments such as quantum physics and Freudian psychoanalysis, not to speak of the failure of twentieth-century communism, shake our understanding of existence. In the process, the dominant tradition in Western philosophy lost its moorings. To bring materialism up to date, Žižek – himself a committed materialist and communist – proposes a radical revision of our intellectual heritage. He argues that dialectical materialism is the only true philosophical inheritor of what Hegel designated the “speculative” approach in thought. *Absolute Recoil* is a startling reformulation of the basis and possibilities of contemporary philosophy. While focusing on how to overcome the transcendental approach without regressing to naïve, pre-Kantian realism, Žižek offers a series of excursions into today’s political, artistic, and ideological landscape, from Arnold Schoenberg’s music to the films of Ernst Lubitsch.

Computation, Cooperation, and Life Jozef Kelemen,Alica Kelemenová,2011-03-22 Gheorghe Păun has played an important role within a wide range of disciplines, from the foundations of traditional computation theory and formal language theory to research gaining its inspiration from living nature. He has significantly contributed to the development of these diverse fields, initiating and pioneering some of them with remarkable imaginativeness and enthusiasm. Gheorghe Păun's research focusses on systems inspired by structures and processes found in living systems, with the field of membrane computing or P systems being the most important of his initiatives. This Festschrift volume, published to honor Gheorghe Păun on the occasion of his 60th birthday, includes 16 contributions by his students and collaborators. The research presented aims to gain a better understanding of what computation is, to find better models of computation, and to look for new computing devices inspired by the structure and/or functioning of natural or societal systems. The papers are preceded by an introduction by Solomon Marcus, Gheorghe Păun's lifelong teacher and mentor, and are organized in topical sections on general computing, grammar systems, membrane systems, and inspirations from natural computing.
