Understanding Complex Ecosystem Dynamics William S. Yackinous, 2015-06-03 *Understanding Complex Ecosystem Dynamics: A Systems and Engineering Perspective* takes a fresh, interdisciplinary perspective on complex system dynamics, beginning with a discussion of relevant systems and engineering skills and practices, including an explanation of the systems approach and its major elements. From this perspective, the author formulates an ecosystem dynamics functionality-based framework to guide ecological investigations. Next, because complex system theory (across many subject matter areas) is crucial to the work of this book, relevant network theory, nonlinear dynamics theory, cellular automata theory, and roughness (fractal) theory is covered in some detail. This material serves as an important resource as the book proceeds. In the context of all of the foregoing discussion and investigation, a view of the characteristics of ecological network dynamics is constructed. This view, in turn, is the basis for the central hypothesis of the book, i.e., ecological networks are ever-changing networks with propagation dynamics that are punctuated, local-to-global, and perhaps most importantly fractal. To analyze and fully test this hypothesis, an innovative ecological network dynamics model is defined, designed, and developed. The modeling approach, which seeks to emulate features of real-world ecological networks, does not make a priori assumptions about ecological network dynamics, but rather lets the dynamics develop as the model simulation runs. Model analysis results corroborate the central hypothesis. Additional important insights and principles are suggested by the model analysis results and by the other supporting investigations of this book - and can serve as a basis for going-forward complex system dynamics research, not only for ecological systems but for complex systems in general. - Provides a fresh interdisciplinary perspective, offers a broad integrated development, and contains many new ideas - Clearly explains the elements of the systems approach and applies them throughout the book - Takes on the challenging and open issues of complex system network dynamics - Develops and utilizes a new, innovative ecosystem dynamics modeling approach - Contains over 135 graphic illustrations to help the reader visualize and understand important concepts

Chaos in the Humanities Patrick Brady, 1994 The deconstructionist, postmodernist era is over & the 1990s are alive with an exciting new, uniquely interdisciplinary avant-garde based on chaos & complexity theory which, in its relationism, holism, & constructionism, is very different from what preceded it. This volume provides the educated reader with a clear, general introduction to this new avant-garde. The criteria for chaos theory are extrapolated from mathematics & physics: firstly, concealed order, self-similarity, nonlinearity, constrained randomness & entropy; secondly, feedback mechanisms & holism; those for complexity theory are emergence & negentropy. The practical application of these criteria to the humanities & social sciences, notably literary theory & criticism & the analysis of culture, is then illustrated by a series of essays on literary works by Robert Frost, Tennessee Williams, & Jean Giono & on the philosophical & anthropological theories of Rene Girard, Michel Serres & others, & a review article on works by N. Katherine Hayles (CHAOS & ORDER), M. Mitchell Waldrop (COMPLEXITY), & Roger Lewin (COMPLEXITY). If you ever wanted to grasp quickly & painlessly the essence of this theory, this is the volume for you. It tells you everything you ever wanted to know about chaos & complexity theory & were afraid to ask.

The Pathos of Distance Jean-Michel Rabaté, 2016-04-21 Jean-Michel Rabaté uses Nietzsche's image of a "pathos of distance," the notion that values are created by a few gifted and lofty individuals, as the basis for a wide-ranging investigation into the ethics of the moderns. Revealing overlooked connections between Nietzsche's and Benjamin's ideas of history and ethics, Rabaté provides an original genealogy for modernist thought, moving through figures and moments as varied as Yeats and the birth of Irish Modernism, the ethics of courage in Virginia Woolf, Rilke, Apollinaire, and others in 1910, T. S. Eliot's post-war despair, Jean Cocteau's formidable selfmythology in his first film *The Blood of a Poet*, Siri Hustvedt's novel of American trauma, and J. M. Coetzee's dystopia portraying an affectless future haunted by a messianic promise.
