Transforaminal Endoscopy for Lumbar Spine Sang-Ho Lee,Sang-Ha Shin,Junseok Bae,Sang-Joon Park,2023-05-30

Endoscopic spine surgery is the essence of the minimally invasive surgery technique. It's a gradually developing field of spine surgery. Nevertheless, many doctors still have difficulties in acquiring an endoscope by themselves. This is especially true for transforaminal approach endoscopy. The editors of the book are pioneers in endoscopy and have had many interesting experiences related to transforaminal endoscopy. Since each patient has a different anatomy and disc shape, there are numerous practical techniques suitable for it, but few are specifically able to describe it. The main purpose of this book is to provide the essence of endoscopy to date, based on actual video images and practical techniques of transforaminal endoscopy accumulated over decades.

Surgery of the spine and spinal cord Charles Harrison Frazier, 1918

Focus on Meningitis Research Phyllis V. Strong, 2004 Meningitis is an infection of the fluid of a person's spinal cord and the fluid that surrounds the brain. People sometimes refer to it as spinal meningitis. Meningitis is usually caused by a viral or bacterial infection. Knowing whether meningitis is caused by a virus or bacterium is important because the severity of illness and the treatment differ. Viral meningitis is generally less severe and resolves without specific treatment, while bacterial meningitis can be quite severe and may result in brain damage, hearing loss, or learning disability. For bacterial meningitis, it is also important to know which type of bacteria is causing the meningitis because antibiotics can prevent some types from spreading and infecting other people. Before the 1990s, Haemophilus influenzae type b (Hib) was the leading cause of bacterial meningitis, but new vaccines being given to all children as part of their routine immunizations have reduced the occurrence of invasive disease due to H. influenzae. Today, Streptococcus pneumoniae and Neisseria meningitidis are the leading causes of bacterial meningitis.
