Heavy Vehicle Accident Reconstruction Christopher D Armstrong, 2018-11-02 The last ten years have seen explosive growth in the technology available to the collision analyst, changing the way reconstruction is practiced in fundamental ways. The greatest technological advances for the crash reconstruction community have come in the realms of photogrammetry and digital media analysis. The widespread use of scanning technology has facilitated the implementation of powerful new tools to digitize forensic data, create 3D models and visualize and analyze crash vehicles and environments. The introduction of unmanned aerial systems and standardization of crash data recorders to the crash reconstruction community have enhanced the ability of a crash analyst to visualize and model the components of a crash reconstruction. Because of the technological changes occurring in the industry, many SAE papers have been written to address the validation and use of new tools for collision reconstruction. Collision Reconstruction Methodologies Volumes 1-12 bring together seminal SAE technical papers surrounding advancements in the crash reconstruction field. Topics featured in the series include: • Night Vision Study and Photogrammetry • Vehicle Event Data Recorders • Motorcycle, Heavy Vehicle, Bicycle and Pedestrian Accident Reconstruction The goal is to provide the latest technologies and methodologies being introduced into collision reconstruction - appealing to crash analysts, consultants and safety engineers alike.

America's Bridges??? Evan N. Kantwell, 2008 Has anyone actually seen a bridge being built in America? This editor has travelled for almost 40 years in America without seeing a single one being constructed -- and few even being repaired. Some critics point out that America has built excellent bridges in Vietnam and Iraq which indicates that the knowledge base remains intact. Others say that individual states cannot feed their armies of bureaucrats and fund their plush pensions and health care programs and still expect to build bridges. And the federal government cannot be counted on for much of anything useful. This book presents recent reports focusing on this part of America's crumbling infrastructure.

VC10: Icon of the Skies Lance Cole, 2017-03-30 "An excellent account of the political battles and the commercial skulduggery . . . and its outstanding service as a transport and tanker with the RAF." —Firetrench The VC10 was the nation's biggest jet airliner of its age and regarded as the world's best-looking airliner. It was safe, fast, and designed to take off from short runways in Africa and Asia, at the request of its main operator BOAC—the airline that would later go on to become today's British Airways. The VC10 and the larger Super VC10 were beloved by pilots and passengers alike and became icons of the 1960s. They were hugely popular all over the world. Yet the VC10 was eclipsed by Boeing's 707 which sold by the hundreds, despite the fact that the 707 was less capable and could not initially operate from the runways of the Commonwealth and old British Empire routes, as the VC10 undoubtedly could. This book blends the story of VC10

development with a well-researched tale of corporate and political power play. It asks; just what lay behind the sales failure of the VC10? Politics played an important part of course, as did BOACs tactics, and a whodunnit cast of politico-corporate events and machinations at the highest level of society during the dying days of Empire in 1960s Britain. Key players in the story, from Tony Benn to famous test pilot Brian Trubshaw (Concorde), are cited and quoted. By exploring this historical period in depth and highlighting all the various impediments that stood in the way of success for the VC10, Lance Cole adds an important layer to our understanding of twentieth century history.
