Handbook of Assessment and Treatment of Eating Disorders B. Timothy Walsh, Evelyn Attia, Deborah R. Glasofer, Robyn Sysko, 2015-10-09 The recent publication of the revised Diagnostic and Statistical Manual of Mental Disorders (DSM-5®) has had a profound impact on the classification of eating disorders, introducing changes that were formalized after years of study by the Eating Disorders Work Group. The Handbook of Assessment and Treatment of Eating Disorders is the only book that provides clinicians with everything they need to know to implement these changes in assessment, diagnosis, and treatment. After an overview of feeding and eating disorders that systematically reviews the changes from DSM-IV to DSM-5®, some of the foremost scholars in each area address eating disorders in adults, children and adolescents, and special populations. Chapters on assessment and treatment, along with accompanying videos, offer comprehensive, state-of-the-art coverage that will benefit clinicians in practice, such as psychiatrists and psychotherapists, as well as mental health trainees. Clinicians will find the following features and content especially useful: Five full chapters on assessment tools cover the evolution of measures and instruments, from the primitive beginnings to the cutting edge of new technological applications. The challenges of diagnosing feeding and eating disorders in children and adolescents are also addressed. Treatment chapters cover restrictive eating, including anorexia nervosa and avoidant/restrictive food intake disorder, binge eating, including bulimia nervosa and binge-eating disorder, and other eating problems, including pica, rumination disorder, and night eating syndrome. One chapter focuses on eating problems among men and boys, who have diverse presentations, and the motivations and body image disturbances that may differ from those typically found among females. Because attunement to culturally and socially patterned characteristics of clinical presentation is essential to an informed and accurate mental health assessment, an entire chapter is devoted to clinical effectiveness in multicultural and cross-cultural settings. Each chapter ends with key clinical points to help readers focus on the most salient content, test comprehension, and review for examinations. Clinicians in both training and practice will find the book's up-to-date, DSM-5®--compatible content to be utterly essential. The Handbook of Assessment and Treatment of Eating Disorders belongs in the library of every mental health professional practicing today.

Assessment of Eating Behavior Adrian Meule,2023-05-08 Eating behavior encompasses a broad range of aspects: from under- to overeating and from normal to pathological eating. The expert contributors to this volume provide a comprehensive overview of assessment methods for eating behavior research and clinical practice, which include both self-report questionnaires and structured interviews as well as assessment of food intake in the laboratory, ecological momentary assessment, cognitive-behavioral tasks, and psychophysiological measures. They explore the assessment of eating disorders such as anorexia nervosa, bulimia nervosa, binge-eating disorder, and others. They also address topics that may be associated with disordered eating and obesity but are also relevant in persons without these conditions, such as restrained eating and dieting, emotional eating, food craving and food addiction, orthorexia nervosa, intuitive and mindful eating, and grazing. Further topics that are strongly connected to eating behavior such as body image, physical activity, body composition and expenditure, food neophobia and disgust sensitivity, and weight-related stigmatization are also examined. This book is essential reading for researchers working in clinical and health psychology, consumer psychology, psychiatry, and nutrition science as well as practitioners, including psychotherapists, physicians, nutrition counsellors, who assess eating behavior and related aspects in their daily work.

Binge Eating Guido K.W. Frank,Laura A. Berner,2020-06-01 This book provides a comprehensive overview of our current understanding of binge eating, which is characterized by the uncontrollable consumption of large amounts of food in a discrete time period. Written by experts on eating disorders, it first introduces the phenotype of binge eating, including its epidemiology and assessment. It then describes the underlying neurobiological alterations, drawing on cutting-edge animal models and human studies to do so. In addition, it extensively discusses current treatment models, including medication, psychotherapy, self-interventions and disease prevention. Lastly, an outlook on the future research agenda rounds out the coverage. Given binge eating's current status as an under-researched symptom, but one shared across many eating disorders, this book provides an up-to-date, integrative and comprehensive synthesis of recent research and offers a valuable reference for scientists and clinicians alike.

Progress in Obesity Research: 8 Bernard Guy-Grand, 1999

Food cravings Adrian Meule, Boris C. Rodríguez-Martín, 2015-05-26 Food craving refers to an intense desire or urge to consume a specific food. In Western or Westernized societies, these craved foods usually have high palatability and are energy dense, that is, they have high sugar and/or fat content. Accordingly, the most often craved food is chocolate. Food craving is a multidimensional experience as it includes cognitive (e.g. thinking about food), emotional (e.g. desire to eat or changes in mood), behavioral (e.g. seeking and consuming food), and physiological (e.g. salivation) aspects. Experiences of food craving are common, that is, they do not reflect abnormal eating behavior per se. However, very intense and frequent food craving experiences are associated with obesity and eating disorders such as bulimia nervosa and binge eating disorder. The aim of this research topic was to gather new contributions to a variety of aspects of food craving, which include its assessment, cognitive and emotional triggers, moderators, and correlates of food craving, and the relevance of food cravings in clinical issues, among others.
