**A Research Agenda For DSM V** David J. Kupfer, Michael B. First, Darrel A. Regier, 2008-08-13 In the ongoing quest to improve our psychiatric diagnostic system, we are now searching for new approaches to understanding the etiological and pathophysiological mechanisms that can improve the validity of our diagnoses and the consequent power of our preventive and treatment interventions -- venturing beyond the current DSM paradigm and DSM-IV framework. This thought-provoking volume -- produced as a partnership between the American Psychiatric Association, the National Institute of Mental Health, the National Institute on Alcohol Abuse and Alcoholism, and the National Institute on Drug Abuse -- represents a far-reaching attempt to stimulate research and discussion in the field in preparation for the eventual start of the DSM-V process, still several years hence. The book Explores a variety of basic nomenclature issues, including the desirability of rating the quality and quantity of information available to support the different disorders in the DSM in order to indicate the disparity of empirical support across the diagnostic system. Offers a neuroscience research agenda to guide development of a pathophysiologically based classification for DSM-V, which reviews genetic, brain imaging, postmortem, and animal model research and includes strategic insights for a new research agenda. Presents highlights of recent progress in developmental neuroscience, genetics, psychology, psychopathology, and epidemiology, using a bioecological perspective to focus on the first two decades of life, when rapid changes in behavior, emotion and cognition occur. Discusses how to address two important gaps in the current DSM-IV: (1) the categorical method of diagnosing personality disorders and their relationship with Axis I disorders, and (2) the limited provision for the diagnosis of relational disorders -- suggesting a research agenda for personality disorders that considers replacing the current categorical approach with a dimensional classification of personality. Reevaluates the relationship between mental disorders and disability, asserting that research into disability and impairment would benefit from the diagnosis of mental disorders be uncoupled from a requirement for impairment or disability to foster a more vigorous research agenda on the etiologies, courses, and treatment of mental disorders as well as disabilities and to avert unintended consequences of delayed diagnosis and treatment. Examines the importance of culture in psychopathology and the main cultural variables at play in the diagnostic process, stating that training present and future professionals in the need to include cultural factors in the diagnostic process is a logical step in any attempt to develop comprehensive research programs in psychology, psychiatry, and related disciplines. This fascinating work, with

contributions from an international group of research investigators, reaches into the core of psychiatry, providing invaluable background and insights for all psychology and psychiatry professionals -- food for thought and further research that will be relevant for years to come.

The American Psychiatric Publishing Textbook of Psychiatry Robert E. Hales, 2008 Its previous edition hailed as the best reference for the majority of practicing psychiatrists (Doody's Book Reviews) and a book that more than any other, provides an approach to how to think about psychiatry that integrates both the biological and psychological (JAMA), The American Psychiatric Publishing Textbook of Psychiatry has been meticulously revised to maintain this preeminence as an accessible and authoritative educational reference and clinical compendium. It combines the strengths of its three editors -- Robert Hales in clinical and community psychiatry, Stuart Yudofsky in neuropsychiatry, and new co-editor Glen Gabbard in psychotherapy -- in recruiting outstanding authors to summarize the latest developments in psychiatry and features 101 contributors, 65 of whom are new to this edition. The book boasts a new interior design, with more figures and color throughout to aid comprehension. Each chapter ends with 5-10 key points, 5-10 recommended readings, and helpful Web sites not only for the clinician but also for patients and family members. The book also includes complimentary access to the full text online. Among the improvements to this edition's content: • Of the text's 44 chapters, 23 either feature new topics or have new authors, making this the most completely revised edition yet. • New basic-science chapters on cellular and molecular biology of the neuron and on neuroanatomy for the psychiatrist conveniently distill essential information on the biological foundations of psychiatric disorders for clinicians. • A new chapter on human sexuality and sexual dysfunctions, and another new chapter on treatment of gay, lesbian, bisexual, and transgender patients, equips clinicians to address the entire spectrum of sexual issues and their attendant mental health concerns. • New chapters on nonpharmacological somatic treatments, supportive psychotherapy, and combination psychotherapy and pharmacotherapy augment the section on psychiatric treatments. • A new chapter on the assessment of dangerousness -- an individual's propensity to commit violent acts -- presents helpful guidelines for appropriately evaluating and minimizing the risk of violence in both outpatient and inpatient settings. Why The American Psychiatric Publishing Textbook of Psychiatry will be your first choice among comprehensive psychiatry textbooks: • Complimentary Access to the Full Text Online -- Online benefits include powerful searching, electronic bookmarking, and download to PDA. • PowerPoint Presentation -- Online version is accompanied by a downloadable PowerPoint presentation, which contains a wealth of material to help you enhance classroom presentation, study, and in clinical use. • Self-Assessment -- An interactive online Self-Assessment allows you to

**Handbook of Borderline Personality Disorder in Children and Adolescents** Carla Sharp, Jennifer L.

Tackett, 2014-04-21 Diagnosing Borderline Personality Disorder (BPD) in young people has long been a tough call for clinicians, either for fear of stigmatizing the child or confusing the normal mood shifts of adolescence with pathology. Now, a recent upsurge in relevant research into early-onset BPD is inspiring the field to move beyond this hesitance toward a developmentally nuanced understanding of the disorder. **Personality Assessment in the DSM-5** Steven K. Huprich, Christopher J. Hopwood, 2014-10-29 The DSM-5 promises to be a major reformulation of psychopathology, and no section is likely to change diagnostic practice more than that of personality pathology. Unlike the DSM-IV, the DSM-5 personality disorders will be conceptualized as involving core deficits in interpersonal and self-functioning, and will utilize a hybrid assessment model involving both pathological trait dimensions and a limited set of personality disorder types. These changes are based on empirical and theoretical work conducted during the era of DSM-III/IV, but nevertheless there is significant disagreement among personality assessors regarding the DSM-5 proposal. In this volume, several members of the DSM-5 work group offer rationales for the proposal and offer empirical evidence regarding suggested changes, and several personality assessment researchers critique the proposal and offer alternative conceptualizations. This book was originally published as a special issue of the Journal of Personality Assessment.
