Assistive Technology: Principles and Applications for Communication Disorders and Special Education Oliver Wendt, 2012-11-02 This book provides readers with vast knowledge of practical applications, theoretical models, services and evidence-based solutions in the areas of assistive technology (AT) and augmentative and alternative communication (AAC). It aims to equip practicing clinicians, educators and students with the necessary background to use AT and AAC with their clients. This book also sheds light on the many different roles and functions of AT and AAC for a large variety of clinical populations, and suggests solutions the reader can implement immediately. Although a particular focus is set on

communication disorders, described applications and resources also apply to individuals with developmental disabilities and sensory impairments. In addition to outlining most recent low and high technology, this book makes a particularly strong effort to teach general principles and guidelines for successful AT and AAC interventions regardless of what particular technology is used. This resource is a crucial addition to the bookshelf of any professional dealing with AT and/or AAC, including speech-language pathologists, special educators, occupational therapists, physical therapists, early intervention specialists, students in professional programs, users of AT or AAC, their families, and applied researchers. This is a must read for novices and seasoned professional alike.

Principles and Practice of Semantic Web Reasoning Hans J. Ohlbach, Sebastian Schaffert, 2004-09-02 The best informal definition of the Semantic Web is maybe found in the May 2001 Scientific American article "The Semantic Web" (Berners-Lee et al.), which says "The Semantic Web is an extension of the current Web in which information is given well-defined meaning, better enabling computers and people to work in cooperation. " People who work on the Semantic Web quite often base their work on the famous "semantic web tower", a product of Tim Berners-Lee's inspiring drawing on whiteboards. The lowest level is the level of character representation (Unicode) and the identification of resources on the Web (URIs). The highest level concerns the problem of trusting information on the Web. Somewhere in the middle of the tower is the logic level. It addresses the problem of representing information on the Web in a way so that inference rules can derive implicit information from explicitly stated information. The workshop "Principles and Practices of Semantic Web Reasoning" (PPSWR 2004) addressed problems on this level. It took place in September 2004 as a satellite event of the 20th International Conference on Logic Programming (ICLP) in St. Malo, France. After PPSWR 2003 in Mumbai, India, it was the second workshop in this series. This book contains the articles presented at the workshop.
