

Environmental Impacts Of A Tsunami

Robert R. Redfield

Environmental Impact II G. Passerini, C.A. Brebbia, 2014-05-14 This book contains papers presented at the 2nd International Conference on Environmental and Economic Impacts on Sustainable Development incorporating Environmental Economics, Toxicology and Brownfields. Following the success of the first meeting held in the New Forest, home of the Wessex Institute of Technology, in 2012, it considers the pressing issues related to environmental impacts in order to provide complete solutions. The included papers discuss how to assess the impact of economic constraints on the environment, considering the social aspects as well as any resulting environmental damage. The overuse of natural resources and the resulting pollution of the environment need to be better understood in financial terms. Uncontrolled development can result in damage to the environment in terms of the release of toxic substances and hazardous waste. The increasing number of new chemical compounds poses a major challenge to the environment as it is difficult in many cases to predict their effects and take appropriate decisions. Their economic impact can be particularly challenging. The book examines issues related to whether some forms of development are compatible with environmental protection, particularly in cases of possible serious contamination and toxicity. The demand for development land has led to the reuse of properties that have been abandoned for a variety of reasons. Many of them are brownfields, sites which have deteriorated in different ways, including by contamination. These sites are usually a burden in terms of economic losses and contribute to the detriment of the quality of life of entire neighbourhoods. Rehabilitation of local fields, particularly those that are contaminated can be an expensive undertaking and require not only technical solutions but the involvement of financial, regulatory and community stakeholders. Fundamental to this premise is the analysis of the risks involved and the development of appropriate strategies. The papers address problems of great importance discussing more constructive and progressive approaches to ensure sustainability. A major motivation for the meeting is to learn from past failures, to avoid repeating similar mistakes, while attempting to prevent emerging threats to the environmental and ecological systems. Topics covered include: Environmental policies and planning; Environmental assessments; Development issues; Sustainable cities; Economic analysis; Natural resources management; Energy and the environment; Food and the environment; Ecosystems health; Soil contamination; Brownfields rehabilitation; Water resources management; Air and water pollution; Toxicity studies; Environmental health risk; Risk analysis; Community participation; Legislation and regulations.

After the Tsunami ,2005 The earthquake and tsunami of 26 December 2004 devastated coastal communities in 12 countries in the Indian Ocean region, with Aceh Province, Sumatra, Indonesia the hardest hit. This report sets out the findings of the UNEP Asian Tsunami Disaster Task Force, set up to help national environmental authorities in the affected countries with their assessment and response to the environmental impact of the disaster. It summarises the interim findings from ongoing assessments in Indonesia, the Maldives, the Seychelles, Somalia, Sri Lanka, Thailand and Yemen, including evidence of environmental concerns that require immediate action. The short term clean-up programme must be coupled with policy development and strengthened institutions, and the recovery agenda will require the clean-up of contamination hotspots, and rehabilitation of critical livelihoods and ecosystems.

Environmental Hazards in the Arabian Gulf Region Abd el-aziz Khairy Abd el-aal,Abdullah Al-Enezi,Qusaie E. Karam,2024-12-03 This book discusses the environmental hazards in the Gulf countries (GCC). The publication of this book is of great importance to all those interested and knowledgeable in the field. Climate change leads to the occurrence of major environmental hazards that must be reduced by estimating the extent of climate change and developing appropriate solutions to mitigate those effects. Climate changes are produced indirectly as a result of human activities with uncalculated consequences. The process of climate change is always accompanied by catastrophic environmental problems such as global warming, high temperatures, storms, hurricanes, floods, desertification processes, air pollution, and the extinction of many types and forms of animals and plants. The Gulf countries are located in the eastern part of the Arabian Peninsula where the crude oil is extracted in several fields. The states suffer from many environmental problems as a result of its geographical location, global climate change, and also from oil extraction operations. The problems include high temperatures, induced earthquakes, and pollution in the soil and marine coast, as well as desertification processes, sand dunes movement, and other environmental problems. Earthquakes are also recorded from and near the oil fields, indicating the link between the oil extraction process and the occurrence of earthquakes. Indeed, the environmental studies published in the Gulf state are very few and do not meet the need of the scientific community in region which need more important environmental publications that help in the great and rapid urban developments in the area.

Post-Disaster Reconstruction of the Built Environment Dilanthi Amaratunga,Richard Haigh,2011-06-13 Disasters threaten all parts of the world and they appear to be increasing in frequency, scale and intensity. Despite huge improvements in the emergency response, permanent reconstruction is often uncoordinated, inefficiently managed and slow to begin. International agencies are geared to an efficient response in terms of humanitarian relief, but they are not well versed in the requirements of long-term reconstruction, which is often constrained by lack of planning and poorly coordinated management. The construction industry is typically engaged in a range of critical activities after a disaster, including provision of temporary shelter in the immediate aftermath and restoration of permanent shelter and public infrastructure

once the immediate humanitarian needs have been attended to. Post-Disaster Reconstruction of the Built Environment identifies the challenges that face the industry and highlights best practice to enable the construction industry to address those problems which make an effective response to these unexpected events difficult. Written by an international team of experts, this book will help researchers and advanced students of construction understand the problems faced by communities and the construction industry when faced with a natural or man-made disaster, and identify the planning and management processes required by the industry to mount an effective response.

Ecological Impacts of Tsunamis on Coastal Ecosystems Jotaro Urabe, Tohru Nakashizuka, 2016-10-28 This book focuses on the ecological impacts of the Great East Japan Earthquake and resulting tsunamis, a rare and extremely large disturbance event, on various coastal ecosystems in Japan's Tohoku area, including sub-tidal and tidal animal communities, sand dune plant communities and coastal forests. The studies presented here describe not only how species and populations in these ecosystems were disturbed by the earthquake and tsunamis, but also how the communities have responded to the event and what types of anthropogenic activities will hamper their recovery processes. In the ecological sciences, it is often argued that large disturbances are critical to shaping community structures and biodiversity in local and regional habitats. However, our understanding of these roles remains limited, simply because there have been few opportunities to examine and address the ecological impacts of large disturbance events. The scale of the 2011 Great East Japan Earthquake makes it one of the largest hazards in the past 1000 years. Thus, this book provides a unique opportunity to advance our understanding of the ecological impacts of large and rare disturbances and the implications of these events in the conservation and management of coastal ecosystems. Following an outline of the Great East Japan Earthquake, the book's content is divided into two major parts. Part I reports on studies examining the ecological impacts of the tsunamis on sub-tidal and tidal animal communities, while Part II focuses on terrestrial plant communities in Japan's coastal Tohoku area. This book will benefit all scientists interested in the ecological impacts of large disturbances on aquatic and terrestrial ecosystems in general, and especially

those who are interested in the ecological management of coastal ecosystems and Ecosystem based Disaster Risk Reduction (EcoDRR).

Environmental Impact Assessments George T. Halley, Yeram T. Fridian, 2009 An (EIA) is an assessment of the possible impact-positive or negative-that a proposed project may have on the natural environment. The purpose of the assessment is to ensure that decision makers consider environmental impacts used to decided whether to proceed with the project. The International Association for Impact Assessment (IAIA) defines an environmental impact assessment as the process of identifying, predicting, evaluating and mitigating the biophysical, social, and other relevant effects of development proposals prior to major decisions being taken and commitments made. After an EIA, the precautionary and polluter pays principles may be applied to prevent, limit, or require strict liability or insurance coverage to a project, based on its likely harms. Environmental impact assessments are sometimes controversial. The book presents new research in the field.

UNEP Stanley Johnson, 2012 To mark its 40th anniversary, the United Nations Environment Programme (UNEP) has sponsored a new book detailing the history of the Nairobi-based organisation over the last four decades. Written by award-winning conservationist Stanley P Johnson, the book charts the evolution of UNEP from its inception at the landmark Stockholm conference of 1972 to its position today at the heart of the global environmental movement. Entitled: The First 40 Years; A Narrative, the book - which is not an official UN history but the view of its world-acclaimed author - explains in depth UNEP's role at the forefront of efforts to protect the environment and is stuffed with interesting facts and figures.

Tsunami Events and Lessons Learned Y.A. Kontar,V. Santiago-Fandiño,T. Takahashi,2013-11-04 This book is a collective effort by world experts, bringing together assorted contributions presented during the Ocean Science Session OS-017, of the AOGS-AGU Joint Assembly held in Singapore in 2012 (the Asia Tsunami and Great East Japan Earthquake and Tsunami events). The chapters cover assessment, evaluation, forecast and lessons learned as well as environmental and societal impacts of the latest tsunamis that occurred in the Indian Ocean in 2004 and the Pacific Ocean in Japan 2011. The book is aimed at experts, scientists and decision makers seeking recent updated information, knowledge and experiences to better understand, quantify, forecast and protect coastal water resources, ecosystems, communities and human settlements which are often affected by tsunamis.

Impact Cratering G. R. Osinski,E. Pierazzo,2012-12-26 Impact cratering is arguably the most ubiquitous geological process in the Solar System. It has played an important role in Earth's history, shaping the geological landscape, affecting the evolution of life, and generating economic resources. However, it was only in the latter half of the 20th century that the importance of impact cratering as a geological process was recognized and only during the past couple of decades that the study of meteorite impact structures has moved into the mainstream. This book seeks to fill a critical gap in the literature by providing an overview text covering broad aspects of the impact cratering process and aimed at graduate students, professionals and researchers alike. It introduces readers to the threat and nature of impactors, the impact cratering process, the products, and the effects - both destructive and beneficial. A series of chapters on the various techniques used to study impact craters provide a foundation for anyone studying impact craters for the first time.
