The Food Lab J. Kenji López-Alt, 2015-09-21 Over 1 Million Copies Sold A New York Times Bestseller Winner of the James Beard Award for General Cooking and the IACP Cookbook of the Year Award The one book you must have, no matter what you're planning to cook or where your skill level falls.—New York Times Book Review Ever wondered how to pan-fry a steak with a charred crust and an interior that's perfectly medium-rare from edge to edge when you cut into it? How to make homemade mac 'n' cheese that is as satisfyingly gooey and velvety-smooth as the blue box stuff, but far tastier? How to roast a succulent, moist turkey (forget about brining!)—and use a foolproof method that works every time? As Serious Eats's culinary nerd-in-residence, J. Kenji López-Alt has pondered all these questions and more. In *The Food Lab*, Kenji focuses on the science behind beloved American dishes, delving into the interactions between heat, energy, and molecules that create great food. Kenji shows that often, conventional methods don't work that well, and home cooks can achieve far better results using new—but simple—techniques. In hundreds of easy-to-make recipes with over 1,000 full-color images, you will find out how to make foolproof Hollandaise sauce in just two minutes, how to transform one simple tomato sauce into a half dozen dishes, how to make the crispiest, creamiest potato casserole ever conceived, and much more.

Biosystems Engineering Applications for Quality Food Production Romeo Rojas, Guillermo Cristian Guadalupe Martínez-Ávila, Nancy del Pilar Medina Herrera, 2024-12-13 Biosystems engineering as an integrated science combines the fields of engineering design and analysis with biological sciences to provide solutions for food production and processing problems. Since food production is an ever-growing, constantly changing food engineering frontier, it is faced with a range of dynamic problems. This new book, *Biosystems Engineering Applications for Quality Food Production: Waste Valorization and New Product Development*, shows how the two areas of biosystems engineering and food industry come together in an

interdisciplinary way to offer solutions to these problems. The book presents the most recent advances in these two areas, ranging from the use of biodigesters, bioremediation of effluents from the food industry, use of microorganisms to produce polymers and their applications, waste recovery, new products development, new applications for new varieties of crops, replacement of fats in food, improvement in bovine production, and production and harvesting microalgae and cyanobacteria. It includes current topics that include the application of biosystems for food processing, the revaluation of agro-industrial waste, bioremediation systems, as well as new trends in the development of food from start to finish. The book also discusses the generation of value-added products and new functional foods. This informative book is a compendium of the use and application of biosystems in the food industry—from primary production to processing, waste evaluation, and bioremediation, that is, an integral food production system. As such, the book will serve as a guide for those involved in the fields of biotechnology and agricultural sciences. It will also prove useful for undergraduate and postgraduate students and those in the agro-industrial sector.

The City of Sharon Byron R. Bowen, 2013-09-05 A Free World Novel THE CITY OF SHARON Real or Imagined[]: The story is based on actual happenings. The totalitarian situation is common knowledge. Some of the dialog is based on rumor and hearsay and sketchy news reports. The characters are aware of limited mythical influence caused by extreme duress. A prime character, Frederick von Popenov spent the first ten years of his life living with his family on a small farm in the country. Life suddenly changed when the nations political party in control nationalizes industry and sets up the police state and the network city. Nobody was allowed to own property or valuables. Many lower class people were sent to work in the common factories and on the common farms. The class workers and peasants sent to live and work at the City of Sharon found life difficult. Caught in the chaos and desperation of the common movement they miraculously escape the gulag or prison. A series of events involve a people from another side whose presence and assistance culminates in the prisoners escape into the hills around the devastated city. Unknown to the public, due to the type of people sent to live there, the City of Sharon had been set up as a designated bombing target by the World Board of Directors. While the prisoners make their escape, the city is obliterated by a nuclear bomb. Those who remained there were killed. Those who lived in other network cities became suspicious of their invisible government due to the total devastation of the city. All the people begin to look for

a way out of party domination. Timorous, desperate and frightened, the fugitives begin a free world civilization in the wilderness about the the city of Sharon. The survivors elude the authorities in control of the totalitarian state and build a military defense system and prepare to defend their new found freedom or nation.
