**Home Workouts** A. G. Scott,2020-10-12 How to tone and sculpt your body, even if you hate cardio or have never stepped inside a gym (and don't plan on doing so!) At one point or another we've all told ourselves, I'm going to sign up for a gym membership, and really do it this time, or, I swear I'll do my workout later on tonight. We all know the benefits of exercise: It improves our physical and mental health, gives us more energy, and boosts our self-image. So why is it so hard to start an exercise regimen, and even harder to stick to it? Despite our best intentions, life gets in the way and there always seems to be an obstacle stopping us from actively trying to live healthier. Whatever the reason, continuing to live a sedentary lifestyle isn't doing you any favors. In fact, physical inactivity is the 4th leading risk factor for global mortality and is a strong predictor for weight gain, cardiovascular disease, and other chronic conditions. Does this mean that you have to make drastic lifestyle changes to start improving your health, mentally and physically? Or that you need to give up time doing what you love just so you can spend hours in the gym? Not at all. I'll let you in on a secret that the fitness industry doesn't want you to know. You don't need fancy equipment or expensive trainers to sculpt the body that, up until now, you've only imagined. A.G. Scott knows firsthand the amazing results that can be achieved with home workouts, and so he has put together the only exercise guide you'll ever need. In *Home Workouts: Anyone - Anytime - Anywhere*, you will discover: The six key elements every workout must have in order to make the most of your time and effort, and how they will have you seeing results sooner than you would believe Exercises for every muscle group and fitness level with clear, comprehensive instructions, diagrams and variations so you're working your target areas every time The #1 upper-body workout that will rapidly build your overall strength (hint: small adjustments make big changes) How this engaging training method can help you burn more calories than traditional cardio, and continue to burn calories even after your workout is finished The numerous benefits of dynamic stretching and how that one simple habit not only warms up your muscles, but also improves your balance and coordination over time Meal plans that can be adapted for any lifestyle, so you can create a plan that meets your personal needs and preferences The most common mistakes people make without realising, and how these can hold you back from achieving incredible results And much more. With the demands and responsibilities of everyday life, you shouldn't have to sacrifice precious hours every week going to the gym to build the body you've always wanted. The key to transforming your life is

having a workout routine that works for you, not against you. This is a plan that will adjust to match your needs and experience, no matter where you are. It's time to leave the costly gym membership behind, save money, and allow yourself more time to enjoy life. If you start today, think how much better you will look and feel in a month. If you want to start looking forward to exercise and commit to achieving the body of your dreams, no strings attached, then scroll up and click the Add to Cart button right now.

And So Much More... Finding Time For Fitness Is Never Easy, But Home Training Could Provide The Answer! From assembling a few pieces of basic training equipment, to setting up a complete gym in a room in your house, at-home workouts could be the key to your fitness. Home Fitness entails exactly what it implies: executing your personal fitness routine while at home using a variety of different techniques. Home fitness has been in our lives for decades - and it's taken on a new role since the Covid-19 pandemic closed gyms around the world. Whether it's a yoga class on Zoom or panic-buying a Peloton, many of us are trying to find ways to exercise effectively within four walls. Whether you are looking to improve your cardiovascular system, lose weight, gain lean muscle mass, or just stay active, in-home training has a place in your life. And the benefits of staying fit are no secret: Improvements in cardiovascular and respiratory health, better regulation of blood sugar, the potential to reduce or eliminate prescription medications (such as for diabetes or blood pressure), weight loss, reduction in cancer risk, and improved musculoskeletal strength are some of the better-known. But when you're working out at home, you're responsible for the whole plan: What exercises should you do? How many reps of each? How often should you rest? Are you feeling a cardio workout? An upper-body workout? Or do you want to fit in a total body workout instead? For many of us, answering all these questions is an added stress we'd rather avoid right now. And the good news is that's something you can avoid—without skipping your workout. We are about to show you an immaculate at-home workout program that take the guesswork out for you and will give you the whole exercise plan.

*The One-Minute Workout* Martin Gibala, Christopher Shulgan, 2017-02-07 Finally, the solution to the #1 reason we don't exercise: time. Everyone has one minute. A decade ago, Martin Gibala was a young researcher in the field of exercise physiology—with little time to exercise. That critical point in his career launched a passion for high-intensity interval training (HIIT), allowing him to stay in shape with just a few minutes of hard effort. It also prompted Gibala to conduct experiments that helped launch the exploding science of ultralow-volume exercise. Now that he's the worldwide guru of the science of time-efficient workouts, Gibala's first book answers the ultimate question: How low can you go? Gibala's fascinating quest for the answer makes exercise experts of us all. His work demonstrates that very short, intense bursts of exercise may be the most potent form of workout available. Gibala busts myths ("it's only for really fit people"), explains astonishing science ("intensity trumps duration"), lays out time-saving life hacks ("exercise snacking"), and describes the fascinating health-promoting value of HIIT (for preventing and reversing disease). Gibala's latest study found that sedentary people derived the fitness benefits of 150 minutes of traditional endurance training with an interval protocol that involved 80 percent less time and just three minutes of hard exercise per week. Including the eight best basic interval workouts as well as four microworkouts customized for individual needs and preferences (you may not quite want to go all out every time), *The One-Minute Workout* solves the number-one reason we don't exercise: lack of time. Because everyone has one minute.
