

The Blue Brain Project

Tomasz Blachowicz, Andrea Ehrmann

The Engineered Mind Professor Ibrahim Elnoshokaty , This book presents the ENOSH-Ω model as an applied framework for Cognitive Intelligence (Cognitive Synapse Architecture), aiming to systematically integrate engineering, neuroscience, and philosophy. The model is distinguished by its practical foundation, enabling the construction of AI systems based on the principles of resonance, predictive coding, and ethical design. Through these elements, ENOSH-Ω demonstrates how artificial intelligence can transcend traditional computational limits to become closer to a cognitive model that mirrors the human brain's capacity for prediction, adaptation, and meaning-making. In this book, ENOSH-Ω is introduced not only as a theoretical framework but also as an applied model that can be tested across multiple domains: from simulating neural processes, to developing cognitive interfaces between humans and machines, and even advancing artificial cognition systems that contribute to expanding our understanding of human consciousness. From this perspective, ENOSH-Ω represents a step toward a new generation of artificial intelligence one that does not seek to compete with or threaten humanity, but rather to deepen our self-understanding and provide a scientific tool to explore the interplay between acoustics, neural processes, and cognitive philosophy

Encyclopedia of Artificial Intelligence Philip L. Frana, Michael J. Klein, 2021-04-07 This authoritative reference work will provide readers with a complete overview of artificial intelligence (AI), including its historic development and current status, existing and projected AI applications, and present and potential future impact on the United States and the world. Some people believe that artificial intelligence (AI) will revolutionize modern life in ways that improve human existence. Others say that the promise of AI is overblown. Still others contend that AI applications could pose a grave threat to the economic security of millions of people by taking their jobs and otherwise rendering them obsolete-or, even worse, that AI could actually spell the end of the human race. This volume will help users understand the reasons AI development has both spirited defenders and alarmed critics; explain theories and innovations like Moore's Law, mindcloning, and Technological Singularity that drive AI research and debate; and give readers the information they need to make their own informed judgment about the promise and peril of this technology. All of this coverage is presented using language and terminology accessible to a lay audience.

CHIPS 2020 VOL. 2 Bernd Höfflinger, 2015-09-19 The release of this second volume of CHIPS 2020 coincides with the

50th anniversary of Moore's Law, a critical year marked by the end of the nanometer roadmap and by a significantly reduced annual rise in chip performance. At the same time, we are witnessing a data explosion in the Internet, which is consuming 40% more electrical power every year, leading to fears of a major blackout of the Internet by 2020. The messages of the first CHIPS 2020, published in 2012, concerned the realization of quantum steps for improving the energy efficiency of all chip functions. With this second volume, we review these messages and amplify upon the most promising directions: ultra-low-voltage electronics, nanoscale monolithic 3D integration, relevant-data, brain- and human-vision-inspired processing, and energy harvesting for chip autonomy. The team of authors, enlarged by more world leaders in low-power, monolithic 3D, video, and Silicon brains, presents new vistas in nanoelectronics, promising Moore-like exponential growth sustainable through to the 2030s.

Neuroscience, Neuroculture, and Neuroethics James Giordano, Roland Benedikter, John R. Shook, 2024-12-10

Contemporary brain research is challenging Western societal norms by questioning basic cornerstones such as individuality, freedom, rationality, solidarity, and the concept of the human being in general. It is giving way to profound changes in Western concepts of culture and civilization. This volume provides a broad overview of the cultural changes incurred by neuroscience and neurotechnology, and explores the evolving fields of neuroeconomics, neuroreligion, neuropolitics, and neuroethics. It takes a multi-disciplinary approach in explaining how neuroscience and neurotechnology will affect society, and illustrates how these tools and methods are being used in research and ever-expanding practices in varying fields. Praise for *Neuroscience, Neuroculture, and Neuroethics: A Broad Overview* "Giordano, Benedikter and Shook provide an accessible, timely, and engaging introduction to the main challenges of neuroscience and neurotechnology for individuals and society. It is impressively wide-ranging, insightfully examining philosophical, cultural, political, and economic dimensions of brain science. An especially fascinating aspect of the book is discussion of the implications of bioenhancement for transhumanism and how it could influence how we define who we are." --Walter Glannon, Professor Emeritus of Philosophy, University of Calgary, Canada "This book provides an excellent survey about the challenging 'Neuro-World'. It reflects the different perspectives which are relevant for modern societies. It is full of information to gather additional knowledge on an international and interdisciplinary level." --Prof. Dr. Ernst Pöppel, Professor of Medical Psychology, Ludwig Maximilian University (LMU) of Munich, Germany "This engaging and highly accessible book offers an excellent short introduction to the powerful impact of neuroscience and neurotechnology upon modern societies. Covering a broad range of issues and perspectives from neuroscience, social science, philosophy, and ethics, it is eminently suitable for teaching and provides a thought-provoking basis for further discussions." --Kathinka Evers, Professor of Philosophy, Senior Researcher in Philosophy at the Centre for Research Ethics & Bioethics (CRB) at Uppsala University, Sweden; and Professor Ad Honorem at the Universidad Central de Chile

Enhancing the Human Experience through Assistive Technologies and E-Accessibility Kouroupetroglou,

Christos, 2014-06-30 Information Communication Technologies (ICT) have become an increasingly prevalent part of everyday life. Today, there are many cases in which ICT assist the elderly and people with disabilities to complete tasks once thought impossible. Enhancing the Human Experience through Assistive Technologies and E-Accessibility discusses trends in ICT in relation to assistive technologies and their impact on everyday tasks for those with disabilities. This reference work provides different perspectives on upcoming technologies and their impact on e-accessibility and e-inclusion, essential topics for researchers, businesses, and ICT product developers in the field of assistive technologies.

The Routledge Handbook of the Computational Mind Mark Sprevak, Matteo Colombo, 2018-09-13 Computational approaches dominate contemporary cognitive science, promising a unified, scientific explanation of how the mind works. However, computational approaches raise major philosophical and scientific questions. In what sense is the mind computational? How do computational approaches explain perception, learning, and decision making? What kinds of challenges should computational approaches overcome to advance our understanding of mind, brain, and behaviour? The Routledge Handbook of the Computational Mind is an outstanding overview and exploration of these issues and the first philosophical collection of its kind. Comprising thirty-five chapters by an international team of contributors from different disciplines, the Handbook is organised into four parts: History and future prospects of computational approaches Types of computational approach Foundations and challenges of computational approaches Applications to specific parts of psychology. Essential reading for students and researchers in philosophy of mind, philosophy of psychology, and philosophy of science, The Routledge Handbook of the Computational Mind will also be of interest to those studying computational models in related subjects such as psychology, neuroscience, and computer science.

Genetic Programming in the Context of Natural Computing Hubert Schölnast, 2010-08 Bachelor Thesis from the year 2009 in the subject Computer Science - Programming, grade: 1, University of Applied Sciences Technikum Vienna (Informations- und Kommunikationssysteme), language: English, abstract: From the sector Natural Computing (simulation of natural Phenomena, hardware from nature, nature borrowed methods, etc.), the area Biological inspired Computing is selected and described. A systematic literature analysis of this field of research over the past 30 years shows that after a boom in neural networks in the 1990s, in the last five years genetic algorithms, including particularly the methods of genetic programming, came to the foreground. In this heuristic procedure computer programs are optimized in an iterative loop. In the startup phase, programs will be randomly generated. In a frequently recurring cycle, the steps program execution, evaluation of results (determination of fitness); selection and diversification (especially crossover and mutation) are used to grow better programs from generation to generation. This work shows criteria to decide in favor of whether or not to use

genetic programming. Proven and experimental methods are presented for all phases of the optimization process, and one will find a short survey on how far these methods correlate to their natural role model. This thesis also refers to common problems such as Bloat. A library of methods collected by the author forms a mixture of a cookbook and a toolbox to be used in Genetic Programming. Finally, this thesis provides some examples where with the help of genetic programming award-winning practical applications have been created, which in many cases have outperformed conventionally obtained results.
