The Chemistry Knowledge for Firefighters Torsten Schmiernund, 2022-11-09 Chemical facts taught in firefighting training courses are often isolated facts. In the book, these facts are integrated into an overall chemical-physical concept. Backgrounds are illuminated, and connections can be recognized. The overall understanding is facilitated, tactical measures for the operation become logical. This book is a translation of the original German 1st edition *Das Chemiewissen für die Feuerwehr* by Torsten Schmiernund, published by Springer-Verlag GmbH Germany, part of Springer Nature in 2019. The translation was done with the help of artificial intelligence (machine translation by the service DeepL.com). A subsequent human revision was done primarily in terms of content, so that the book will read stylistically differently from a conventional translation. Springer Nature works continuously to further the development of tools for the production of books and on the related technologies to support the authors.

**Foundations of College Chemistry** Morris Hein, Susan Arena, Cary Willard, 2023 *Foundations of College Chemistry*, 16th edition presents chemistry as a modern, vital subject and is designed to make introductory chemistry accessible to all beginning students. It is intended for students who have never taken a chemistry course or those who had a significant interruption in their studies but plan to continue with the general chemistry sequence. The central focus is to make chemistry

interesting and understandable and teach students the problem-solving skills they will need. This International Adaptation offers new and updated content with improved presentation of all course material. It builds on the strengths of previous editions, including clear explanations and step-by-step problem solving. The material emphasizes real-world applications of chemistry as the authors develop the principles that form the foundation for the further study of chemistry. There is new and expanded coverage of polarizing power and polarizability - Fajans' rules, collision number and mean free path, abnormal molecular masses and van't Hoff factor, and applications of radioactivity.

**Introduction to General, Organic, and Biochemistry** Morris Hein, 1997 The authors recognize that both science and mathematics may be daunting subjects for many students taking this course. With this in mind, they have anticipated where students might stumble, and have paced and organized this text to help them through. Their goal is to make the material interesting and relevant, so students understand the basic chemical principles related to their career. The authors emphasize problem solving and provide a range of practice exercises. As in previous editions, the text first presents the basic concepts of general chemistry and then moves into organic and biochemistry. In this edition, the first two sections have been revised primarily to improve explanations, and include new pedagogical features. The biochemistry portion has been thoroughly updated to include coverage of many recent developments and emerging technologies in the field.
