**Dr. Brian Fagan, Chris Scarre**

**The Life Cycle of Civilizations** Stephen Blaha, 2002 This book is an expanded version of *The Rhythms of History*, the book that made macro-History into a semi-quantitative Science. New features include: 1. an appendix showing how the history of Mayan civilization conforms to the book's Theory of Civilizations including the latest information from the newly discovered hieroglyphic texts at Dos Pilas, Guatemala; 2. an appendix on the sub-Saharan African civilization, Great Zimbabwe, showing it fits the theory; 3. a comparison of the theory with Toynbee's observations showing the many new features resulting from a quantitative theory; 4. numerous historic pictures and illustrations of the civilizations of Mankind including a number of newly found pictures from the nineteenth century; 5. a chapter describing the potentially disturbing implications of patterns in civilizations - Are we free? ? and the implications for the Philosophy of History; and 6. expanded comments in many sections such as the sections on the future of Humanity, the role of China, and the Islamic - West conflict. The book begins with a hard hitting, tell it like it is chapter on the current international situation with statements such as: The United States and Western civilization is now engaged in a small Vietnam-style war on a global scale at the time of this writing. This war is still in the early stages of development. ... The attack on the World Trade Center by Muslim terrorists may have the same significance for Western civilization that the Gothic invasion of Rome itself in the prime of the Empire (the First Century AD) had for the future of Rome. They may be a premonition of things to come - not necessarily soon but perhaps in a few centuries. The Goths returned three centuries later and remained as permanent conquerors. ... Over the long term the West must free itself from a dependence on Muslim oil. Muslim oil revenues are the fuel for the development of weapons of mass destruction by Iran and Iraq. In the future they will supply the revenues of an expansionist Islam. ... As the silk trade looted the Roman Empire of its gold and reduced its economy, the trade in oil is looting the West of its prosperity and freedom of action. The rise and fall of oil prices has a significantly greater effect on the American and world economy than the raising and lowering of interest rates by central banks. The book then describes a theory of civilizations that led to these observations. Currently unfolding events seem to be fulfilling the predictions which were made last year (including the new North Korean threat that seems to be consistent with a predicted breakdown in Japan ? North Korea will create major problems with Japan. As this is being written Japan is moving Aegis destroyers nearer to North Korea and preparing for defense.) THE EVENTS DESCRIBED IN THIS BOOK, AND ITS PREDECESSOR, APPEAR TO BE HAPPENING AS PREDICTED

LAST YEAR. According to Theory of Civilizations the basis of civilizations was laid with a genetic mutation (found by Ding et al) 40,000 years ago that created bold enterprising individuals who became the leadership group of civilizations: a group that Toynbee called the creative minority. When the world's climate became warmer and more stable 10,000 years ago the seeds of civilizations began to germinate. Thus the origin of civilizations is tied to human genetics. The book then shows that a long-term social behavior pattern of mankind (based on four generation trends) causes civilizations to develop and oscillate in patterns of routs and rallies. Civilizations rise and fall due to their internal human dynamics. The theory of civilization is developed using equations and 68 diagrams that show a close detailed match between the theory and the actual history of all known Asian, European and African civilizations over the last 5,500 years. The theory projects the future of today's civilizations (including the future of Western and Islamic civilizations). It also successfully describes the interaction of barbarians and civilizations, the interaction of two civilizations, the impact of modern technology on civilizations (it accounts for the Luddite reaction to the Industrial Revolution), the impact of major environmental events on civilizations (e.g. the collapse of Minoan civilization due to a volcanic eruption), and the disintegration of civilizations. It also accounts for the tremendous growth phases seen in many civilizations such as the building of the great pyramids in Egyptian civilizations. Based on the theory fifteen new civilizations are identified including new prehistoric Chinese and Egyptian civilizations. Having shown the success of the theory for earth civilizations it considers the form of extraterrestrial civilizations and calculates their impact on Western civilization should contact be established. The book also shows the need for the colonization of space and nearby planets if mankind is to progress in the future. The book analyzes the impact of the lengthening life spans of mankind on the future of civilizations. Predictions are made for the state of the world for 2050 and 2100. A detailed understanding the past enables the theory of civilizations to make predictions for the future. Defining Progress to be the sum of the world's civilizations the book shows that Progress seems to be approximately linearly increasing over the last 5,500 years. A plot of Progress appears on the book's cover (shown on this web page) together with the contributions of each civilization to Progress. (The vertical order of the civilizations in the plot is arbitrary. Older civilizations tend to be lower in the plot.) The book is a tour de force that makes History a Science rather than a collection of random events. It is the first detailed mathematical treatment of history. Although the book contains mathematics it is intended for the general reader as well as the mathematically inclined. There are copious verbal descriptions of the theory as well as many figures plotting the theory versus historical events. A qualitative, descriptive theory of civilizations is also presented that is like a Dow Theory of Civilizations.

*Globalization and Civilizations* Mehdi Mozaffari, 2002 Globalization and Civilizations challenges established assumptions about the nature of civilizations and the supposed inevitability of the conflict between the Islamic and Western worlds. Uniquely, this edited book critically interrogates the concept of 'civilization' by asking whether it is still valid in the globalized world economy of the twenty-first century. The first half of the book provides an historical and theoretical context to understand the idea of 'civilization' in political science and demonstrates how the various social, economic, political and cultural processes of globalization have radically altered perceptions of civilization. The second half of the book looks particularly at non-Western examples of the interaction between globalization and civilization and includes case studies on the Arab world, Islam, China, India and Europe

*Teaching for Wisdom* Michel Ferrari, Georges Potworowski, 2008-10-14 The chapters in this volume are all devoted to a single question: Can wisdom be taught, or at least fostered? They span many different traditions and times, which generates both problems and opportunities. The most obvious problem is that of translation. As Curnow points out in the opening chapter, the word 'wisdom' is used to translate a variety of terms from antiquity that have only a partial overlap with modern work. It is interesting to consider that the Egyptian word 'seboyet' translates as either wisdom or instruction. The same is true of terms from Buddhism or Confucianism, or even the Ancient Greek tradition acknowledged as a source of most current views of wisdom in the West; all the terms drawn from other languages and traditions have only partially overlapping meaning. With this in mind, each chapter can be read independently of the others. However, we have also arranged them in an order that reflects common themes that emerge despite this diversity. We have not arranged them by geographical region, or historical time, but rather by the sort of educational strategy they advocate to foster wisdom. The first chapter by Curnow provides a basic overview of approaches to teaching for wisdom in the West. This is already a very ambitious undertaking, spanning ancient Egypt and Mesopotamia to the renaissance and the dawn of the modern world, where the term wisdom has fallen largely out of fashion until very recently.

*Systemic Structure Behind Human Organizations* Yi Lin, Bailey Forrest, 2011-12-14 Systemic Structure behind Human Organizations: From Civilizations to Individuals shows how the systemic yoyo model can be successfully employed to study human organizations at three different levels: civilizations, business enterprises, and individuals. This monograph tackles managerial problems from an holistic perspective such as how a business entity grows and dies and how a CEO can manipulate the choices of long- and short-term projects in order to gain more control over the board of directors. By creating a uniform language and logic of reasoning, the book provides examples and convincing results. Additionally the book shows

how the same model, thinking logic, and methodology of the systems research can be equally applied to analyze problems and situations considered in natural sciences, social sciences, and humanity areas. Therefore it offers knowledge of a brand new tool to attack organizational problems. By concentrating on difficult, unsettled issues in these varying areas, this monograph thoroughly explains how some laws of nature can be established for the common study of natural and social sciences.

**Civilization's Quotations**, 2002 These 8000 clever and insightful sayings, organized by theme, will enrich the prose of writers, public speakers, and anyone seeking to lead or persuade. It also provides a wealth of inspirational affirmations to guide us in our lives. Chinese proverbs, Roman maxims and the wisdom of writers from William Penn to Kahlil Gibran cover themes from humility and patience to courage, will and action. The topics are arranged in a sequence that begins with birth and progresses through the seasons of the Ideal Life. When possible, each quotation flows into the next one so that the whole section reads almost like a speech given by one person. In other sections, one quotation plays off another, creating a lively discussion amongst the authors.
