The Oxford Handbook of Comparative Evolutionary Psychology Jennifer Vonk, Todd K. Shackelford, 2012-02-13 This volume brings together leading experts in comparative and evolutionary psychology. Top scholars summarize the histories and possible futures of their disciplines, and the contribution of each to illuminating the evolutionary forces that give rise to unique abilities in distantly and closely related species.

Evolutionary Theory: Fringe or Central to Psychological Science Danielle Sulikowski, 2016-08-08 The computational theory of mind, which views the brain as an information processor that operates on cognitive representations, is central to modern cognitive psychology and is the dominant perspective from which brain function is conceptualized and studied. Evolutionary Psychology (EP) is the application of evolutionary theory to understanding human behaviour and cognition. Unlike other core Psychology topic areas (such as Personality, Learning or Developmental Psychology), however, EP is not defined by the subset of psychological phenomena it seeks to describe and understand. It is instead defined by a specific meta-theoretical perspective, from which it seeks to (potentially) explain all psychological phenomena. The central question posed by this volume is whether this over-arching nature provides an opportunity for evolutionary approaches to offer an alternative meta-theoretical perspective to the information processing / representational view of brain function and behavior.

[The Best Writing on Mathematics 2010](#) Mircea Pitici, 2021-09-14 The year's most memorable writing on mathematics This anthology brings together the year's finest writing on mathematics from around the world. Featuring promising new voices alongside some of the foremost names in mathematics, *The Best Writing on Mathematics* makes available to a wide audience many articles not easily found anywhere else—and you don't need to be a mathematician to enjoy them. These writings offer surprising insights into the nature, meaning, and practice of mathematics today. They delve into the history, philosophy, teaching, and everyday occurrences of math, and take readers behind the scenes of today's hottest mathematical debates. Here readers will discover why Freeman Dyson thinks some mathematicians are birds while others are frogs; why Keith Devlin believes there's more to mathematics than proof; what Nick Paumgarten has to say about the timing patterns of New York City's traffic lights (and why jaywalking is the most mathematically efficient way to cross Sixty-sixth Street); what Samuel Arbesman can tell us about the epidemiology of the undead in zombie flicks; and much, much more. In addition to presenting the year's most memorable writing on mathematics, this must-have anthology also includes a foreword by

esteemed mathematician William Thurston and an informative introduction by Mircea Pitici. This book belongs on the shelf of anyone interested in where math has taken us—and where it's headed.

Evolutionary Theory and Human Nature Ron Vannelli, 2001-08-31 *Evolutionary Theory and Human Nature* is an original, highly theoretical work dealing with the transition from genes to behavior using general principles of evolution, especially those of sexual selection. It seeks to develop a seamless transition from genes to human motivations as bio-electric brain processes (emotional-cognitive processes), to human nature propensities (various constellations of emotional-cognitive forces, desires and fears) to species typical patterns of behavior. This work covers two often antagonistic fields: biology and the social sciences. It should be of strong interest to anthropologists, sociologists, sociobiologists, psychobiologists and psychologists who are interested in the question of human nature influences on social behavior.

Cognition on Cognition Jacques Mehler, Susana Franck, 1995 This broad-ranging volume includes a series of articles that were originally published as a special issue of *Cognition* produced to celebrate the 50th volume of the journal. This broad-ranging volume includes a series of articles that were originally published as a special issue of *Cognition* produced to celebrate the 50th volume of the journal. Written by some of the foremost scientists studying different aspects of the mind, the articles review progress achieved over the past twenty-five years in the main areas of the discipline. They provide a unique record of what is happening today in the field of cognition, with an added historical perspective that is often absent from other volumes that seek to cover so much ground. The chapters have been arranged in sections on Neuropsychology, Thinking, and Language and Perception. These thematic areas deal with theoretical aspects ranging from the status of explanations in cognitive science, to evolutionary accounts of human cognitive faculties, to the way in which humans use these faculties to reason about, perceive, and interact with their environment and each other. There are also contributions dealing with the abilities of young infants and articles that relate behaviors to their underlying neural substrata.

Without Good Reason Edward Stein, 1996-01-11 Are humans rational? Various experiments performed over the last several decades have been interpreted as showing that humans are irrational—we make significant and consistent errors in logical reasoning, probabilistic reasoning, similarity judgements, and risk-assessment, to name a few areas. But can these experiments establish human irrationality, or is it a conceptual truth that humans must be rational, as various philosophers have argued? In this book, Edward Stein offers a clear critical account of this debate about rationality in philosophy and cognitive science. He discusses concepts of rationality—the pictures of rationality that the debate centres on—and assesses the empirical evidence used to argue that humans are irrational. He concludes that the question of human rationality must be answered not conceptually but empirically, using the full resources of an advanced cognitive science. Furthermore, he extends this conclusion to argue that empirical considerations are also relevant to the theory of knowledge—in other words, that epistemology should be naturalized.

Evolutionary Psychology Steven J. C. Gaulin, Donald McBurney, 2004 The second edition of *Evolutionary Psychology* is the only book on the market that shows the relevance of evolutionary thinking to the entire range of psychological phenomena, and it does so at a level appropriate for readers new to the field. Each chapter deals with a particular topic by illustrating how an evolutionary approach illuminates behavior as a response to problems faced by humans in our evolutionary past. The authors--representing the disciplines of both psychology and anthropology--present their material traditionally: they first provide the foundation for understanding the fundamentals of modern evolutionary theory; then systematically apply this theory to learning, cognition, perception, emotion, development, pathology, and more. For any reader interested in a richer understanding of human behavior and the psychological mechanisms that underlie it.

The Oxford Handbook of Evolutionary Perspectives on Violence, Homicide, and War Todd K. Shackelford, Viviana A. Weekes-Shackelford, 2012-08-23 This volume synthesizes the theoretical and empirical work of leading scholars in the evolutionary sciences to produce an extensive and authoritative review of this literature.

Evolutionary Psychology David M. Buss, 2004 This revised text provides a comprehensive overview of the field of evolutionary psychology. It includes information on landmarks in human evolution, intuitive biology, women's long-term mating strategies, men's long-term mating strategies and problems of kinship.

Evolutionary Psychology Matthew Rossano, 2003 Written in a lively and engaging manner, this new work places evolutionary psychology within the broad sweep of our primate heritage and the full scope of our evolutionary story. Beginning with the basics of evolution, the book first unpacks the far-ranging saga of human evolution, then moves on to examine motor behavior and emotions, sexual behavior and mate selection, and higher cognition.

Evolutionary Psychology and Violence Richard W. Bloom, Nancy Dess, 2003-03-30 Each chapter in this volume poses a public policy issue related to violence, describes aspects of evolutionary psychology that are relative, and then posits public policy recommendations based on this psychological model. Topics covered also include psychopathy, despotism, and suicide bombings. This volume is designed as an accessible way for policymakers outside of academia to learn about new theoretical developments. Evolutionary psychology—a relatively new theoretical model of psychology—provides valuable and exciting insights on human violence and public policy issues related to human violence, from war and terrorism to rape and criminality. To this end, each chapter in this volume poses a public policy issues related to violence, describes aspects of evolutionary psychology that are relative and then posits public policy recommendations based on this psychological model. Topics covered also include psychopathy, despotism, and suicide bombings. This volume, designed as an accessible way for policymakers outside of academia to learn about new theoretical developments, also explodes the myths about evolutionary psychology, such as the false claim that it justifies immoral behavior or focuses only on humans' ugly underbelly. While

appealing to policymakers across foundations and agencies, this collection will also interest scholars and teachers focused on evolutionary psychology, public policy, criminal justice, security, public affairs, sociology, and anthropology.

The MIT Encyclopedia of the Cognitive Sciences (MITECS) Robert A. Wilson, Frank C. Keil, 2001-09-04 Since the 1970s the cognitive sciences have offered multidisciplinary ways of understanding the mind and cognition. The MIT Encyclopedia of the Cognitive Sciences (MITECS) is a landmark, comprehensive reference work that represents the methodological and theoretical diversity of this changing field. At the core of the encyclopedia are 471 concise entries, from Acquisition and Adaptationism to Wundt and X-bar Theory. Each article, written by a leading researcher in the field, provides an accessible introduction to an important concept in the cognitive sciences, as well as references or further readings. Six extended essays, which collectively serve as a roadmap to the articles, provide overviews of each of six major areas of cognitive science: Philosophy; Psychology; Neurosciences; Computational Intelligence; Linguistics and Language; and Culture, Cognition, and Evolution. For both students and researchers, MITECS will be an indispensable guide to the current state of the cognitive sciences.

Handbook of Personology and Psychopathology Stephen Strack, 2005-01-19 Personology is the study of human character in all of its complexities, covering the range of normal and pathological individuals, from evolutionary development, classification, diagnosis and measurement, to intervention at the individual, family, and societal levels. This volume, sure to become a classic in the field, provides a state-of-the-art overview of the field of personology, including personality theory, taxonomy, and assessment; diagnosis and treatment of personality disorders; and the interface between normal and abnormal personlity. The breadth and depth of this monumental work and the caliber of its contributors is unsurpassed. * Many of the leading clinicians and researchers in psychology are contributors including Otto Kernberg, John Livesley, Robert Bornstein, Jeffrey Magnavita, Drew Westen, Irving Weiner, and Lorna Benjamin * Represents the culmination of a professional career and a capstone to our publishing program in the area of personality and psychopathology

Handbook of Human Symbolic Evolution Andrew Lock, Charles R. Peters, 1996 A reference work that should be a first port of call for students and researchers in any discipline studying fundamental questions concerning the origins and nature of human symbolic abilities. The book is about the evolution of humanity: our language, art, tools, and communication. As such it covers a wide range of disciplines: anthropology, psychology, primatology, paleontology, and archaeology. The various topics

are dealt with by experts from each field, in articles that provide summaries that are scholarly but will also be comprehensive to the many people (both lay and professional) who are interested in human evolution.
