Formal Methods for Industrial Critical Systems Stefan Leue,Pedro Merino,2008-05-08 This book constitutes the thoroughly refereed post-workshop proceedings of the 12th International Workshop on Formal Methods for Industrial Critical Systems, FMICS 2007, held in Berlin, Germany, in July 2007 - colocated with CAV 2007, the 19th International Conference on Computer Aided Verification. The 15 revised full papers presented together with the abstracts of 2 invited lectures were carefully selected during two rounds of reviewing and improvement from 31 initial submissions. The papers strive to promote research and development for the improvement of formal methods and tools for industrial applications and they are organized in topical sections on control systems, scheduling and time, verification, software, and testing.

Financial Systems in Troubled Waters Alessandro Carretta,Gianluca Mattarocci,2013-05-07 This collection considers the financial crisis from a managerial perspective, focussing on the business implications for the financial industry. Topics examined include governance, information needs and strategy of financial intermediaries and investors. The contributions build on the existing literature and present some unique insights on governance, credit quality evaluation and performance measurement. In a fast growing or steady market, it is possible for even an inefficient financial system to satisfy investors' and firms' needs. However, the current financial crisis has brought into sharp relief the limits of the inefficient practices adopted by the market, and made clear the importance of developing more effective governance mechanisms, more detailed and complete information databases and new strategies. The crisis has also brought to the fore issues about the governance of financial intermediaries that had not been previously addressed. These include board diversity, internal monitoring procedures and the existence of interlocking directorates. More broadly, the financial crisis has radically altered the international framework, with an increasingly consolidated financial sector, and the rise of new markets (such as China) that now play a predominant role in the worldwide market. Studies on the competition and on the performance in this new scenario are essential in order to understand the implications of recent events.

Toxicologic Assessment of the Army's Zinc Cadmium Sulfide Dispersion Tests National Research Council,Division on Earth and Life Studies,Commission on Life Sciences,Subcommittee on Zinc Cadmium Sulfide,1997-05-30 During the 1950s

and 1960s, the U.S. Army conducted atmospheric dispersion tests in many American cities using fluorescent particles of zinc cadmium sulfide (ZnCdS) to develop and verify meteorological models to estimate the dispersal of aerosols. Upon learning of the tests, many citizens and some public health officials in the affected cities raised concerns about the health consequences of the tests. This book assesses the public health effects of the Army's tests, including the toxicity of ZnCdS, the toxicity of surrogate cadmium compounds, the environmental fate of ZnCdS, the extent of public exposures from the dispersion tests, and the risks of such exposures.
