Radiological Terrorism Bahram Ghiassaei, 2025-10-22 This book addresses radiological terrorism and the significant threats it poses to the public, the economy, and the environment across the globe. The work assesses the global radiological security issues associated with the illicit acquisition of radioactive substances by non-State actors, in particular terrorist groups, for malicious purposes. The book also examines the risks posed by 'sealed radioactive sources' used extensively in medical and industrial applications worldwide, which may be used in acts of terrorism and in illicit transnational trafficking. Moreover, the book provides an assessment of the international legal and institutional frameworks governing radiological security and radiological counter-terrorism. It highlights the inherent deficiencies and inadequacies that the international community needs to address, with a view to effectively counter the evolving and emerging radiological terrorism threats worldwide. Furthermore, the book discusses the transnational nature of radiological terrorism and the need for multilateral cooperation to counter the global radiological threats and effectively mitigate the risks posed to the public, the economy, and ecological systems. This book will be of interest to students of terrorism studies, security studies, nuclear non-proliferation, science and technology studies, and International Relations.

Product and Process Design Principles Warren D. Seider, Daniel R. Lewin, J. D. Seader, Soemantri Widagdo, Rafiqul Gani, Ka Ming Ng, 2016-05-23 The fourth edition enhanced eBook update of Product and Process Design Principles contains many new resources and supplements including new videos, quiz questions with answer-specific feedback, and real-world case studies to support student comprehension. Product and Process Design Principles covers material for process design courses in the chemical engineering curriculum—demonstrating how process design and product design are interlinked and their importance for modern applications. Presenting a systematic approach, this fully-updated new edition describes modern

strategies for the design of chemical products and processes. The text presents two parallel tracks—product design and process design—which enables instructors to easily show how product designs lead to new chemical processes and, alternatively, teach product design as separate course. Divided into five parts, the fourth edition begins with a broad introduction to product design followed by a comprehensive introduction to process synthesis and analysis. Succeeding chapters cover the products and processes of design synthesis, design analysis, and design reports. The final part of the book presents ten case studies which look at product and process designs such as for Vitamin C tablets, conductive ink for printed electronics, and home hemodialysis devices. Effective pedagogical tools are thoroughly and consistently implemented throughout the text.

An Introduction to Mathematical Statistics and Its Applications Richard J. Larsen, Morris L. Marx, 2001 Using high-quality, real-world case studies and examples, this introduction to mathematical statistics shows how to use statistical methods and when to use them. This book can be used as a brief introduction to design of experiments. This successful, calculus-based book of probability and statistics, was one of the first to make real-world applications an integral part of motivating discussion. The number of problem sets has increased in all sections. Some sections include almost 50% new problems, while the most popular case studies remain. For anyone needing to develop proficiency with Mathematical Statistics.
