**Semantic Modeling and Interoperability in Product and Process Engineering** Yongsheng Ma, 2013-06-06 In the past decade, feature-based design and manufacturing has gained some momentum in various engineering domains to represent and reuse semantic patterns with effective applicability. However, the actual scope of feature application is still very limited. Semantic Modeling and Interoperability in Product and Process Engineering provides a systematic solution for the challenging engineering informatics field aiming at the enhancement of sustainable knowledge representation, implementation and reuse in an open and yet practically manageable scale. This semantic modeling technology supports uniform, multi-facet and multi-level collaborative system engineering with heterogeneous computer-aided tools, such as CAD/CAM, CAE, and ERP. This presented unified feature model can be applied to product and process representation, development, implementation and management. Practical case studies and test samples are provided to illustrate applications which can be implemented by the readers in real-world scenarios. By expanding on well-known feature-based design and manufacturing approach, Semantic Modeling and Interoperability in Product and Process Engineering provides a valuable reference for researchers, practitioners and students from both academia and engineering field.

**Collaborative Process Automation Systems** Martin Hollender, 2010 Providing a comprehensive overview of the state-of-the-art in Collaborative Process Automation Systems (CPAS), this book discusses topics such as engineering, security, enterprise connectivity, advanced process control, plant asset management, and operator efficiency. Collaborating with other industry experts, the author covers the system architecture and infrastructure required for a CPAS, as well as important standards like OPC and the ISA-95 series of standards. This in-depth reference focuses on the differences between a CPAS and traditional automation systems. Implications on modern automation systems are outlined in theory and practice. This book is ideal for industrial engineers, as well as graduate students in control and automation.

**Plant Intelligent Automation and Digital Transformation** Swapan Basu, 2022-10-28 Plant Intelligent Automation and Digital Transformation: Process and Factory Automation is an expansive four volume collection reviewing every major aspect of the intelligent automation and digital transformation of power, process and manufacturing plants, from the specific control and automation systems pertinent to various power process plants through manufacturing and factory automation systems. This volume introduces the foundations of automation control theory, networking practices and communication for power,

process and manufacturing plants considered as integrated digital systems. In addition, it discusses Distributed control System (DCS) for Closed loop controls system (CLCS) and PLC based systems for Open loop control systems (OLCS) and factory automation. This book provides in-depth guidance on functional and design details pertinent to each of the control types referenced above, along with the installation and commissioning of control systems. - Introduces the foundations of control systems, networking and industrial data communications for power, process and manufacturing plant automation - Reviews core functions, design details and optimized configurations of plant digital control systems - Addresses advanced process control for digital control systems (inclusive of software implementations) - Provides guidance for installation commissioning of control systems in working plants

*Process Plant Layout* Sean Moran, 2016-11-16 *Process Plant Layout, Second Edition*, explains the methodologies used by professional designers to layout process equipment and pipework, plots, plants, sites, and their corresponding environmental features in a safe, economical way. It is supported with tables of separation distances, rules of thumb, and codes of practice and standards. The book includes more than seventy-five case studies on what can go wrong when layout is not properly considered. Sean Moran has thoroughly rewritten and re-illustrated this book to reflect advances in technology and best practices, for example, changes in how designers balance layout density with cost, operability, and safety considerations. The content covers the 'why' underlying process design company guidelines, providing a firm foundation for career growth for process design engineers. It is ideal for process plant designers in contracting, consultancy, and for operating companies at all stages of their careers, and is also of importance for operations and maintenance staff involved with a new build, guiding them through plot plan reviews. - Based on interviews with over 200 professional process plant designers - Explains multiple plant layout methodologies used by professional process engineers, piping engineers, and process architects - Includes advice on how to choose and use the latest CAD tools for plant layout - Ensures that all methodologies integrate to comply with worldwide risk management legislation

**Grid Economics and Business Models** Dirk Neumann, Thomas Fahringer, 2008-08-21 The Grid computing concept, which allows users to integrate administratively and graphically dispersed computing resources, has been gaining traction in a number of application areas during the past few years. By interconnecting many - heterogeneous, though usually virtualized - computing resources, virtual computer centers or supercomputers can be created, providing a seamless supply of computing resources. Grid computing provides benefits not only for scientific computing (e.g., SETI@home, which interconnects one million computers across 226 countries with a total processing power of 711 TFLOPS) but also in a commercial environment. It is projected that computing Grids can lower the total IT costs of businesses by 30%. The report "Grid Computing: A Vertical Market Perspective 2005-2010" (by The Insight Research Corporation) estimates an increase of worldwide Grid spending from \$714.9 million in 2005 to approximately \$19.2 billion in 2010. One of the most prominent

activities in academia is the EGEE project being funded with 30 MEuro by the European Commission. EGEE brings together researchers from over 27 countries with the common aim of developing a service Grid infrastructure, which is suited for scientific computing with very high demand for processing power.

*Ingeniería de instrumentación de plantas de proceso* Bollaín Sánchez, Manuel,2019-01-01 Las plantas de proceso y energía requieren, para su funcionamiento seguro y eficiente, complejos sistemas de control. Estos, a su vez, se apoyan en multitud de instrumentos, así como en redes de comunicaciones digitales industriales. Por todo ello, en los proyectos de ingeniería de tales plantas, la parte correspondiente a los sistemas de control e instrumentación ocupa un lugar esencial. Este libro, escrito por profesionales especializados en diversos aspectos de estas tecnologías, sirve de guía para el desarrollo de tales proyectos. Su enfoque eminentemente práctico no descuida los fundamentos básicos teóricos de las disciplinas involucradas. El contenido del libro puede ser útil tanto a los profesionales con experiencia en estas materias como para aquellos lectores que se están iniciando en este apasionante campo de la ingeniería. La edición digital del libro ha facilitado el complementarlo con utilidades y programas de cálculo de diversas tareas en los proyectos, lo que enriquece su valor como herramienta para las labores de ingeniería y le otorga una nueva dimensión práctica.
