Académie des sciences (France)

La thermodynamique concrète Jean-Paul Duroudier, 2017-02-01 Cet ouvrage est le premier volume de la série Equipements industriels pour le génie des procédés. Il propose une étude approfondie et diversifiée de cette discipline. La thermodynamique concrète détaille les concepts nécessaires à l'étude de l'énergie : les systèmes, les états, les lois et les théorèmes qui s'y réfèrent. Les équilibres entre phases sont étudiés à travers les notions d'activité et de fugacité. Les transferts de matière s'en déduisent facilement en particulier s'ils sont accompagnés de transfert de chaleur. Le choix et la description des équipements, en particulier l'indication de leur rendement, faciliteront la conception de logiciels utiles. Des annexes fournissent des compléments pour certains calculs complexes. Enfin, de nombreuses références permettent au lecteur d'approfondir les questions de son choix.

Cristallisation et cristallisoirs Jean-Paul Duroudier, 2018-04-01 Cristallisation et cristallisoirs présente la naissance des cristaux (nucléation) dans ses détails théoriques et pratiques (zone métastable, temps de latence, agitation). La croissance des cristaux implique pour les molécules le franchissement de la couche de diffusion entourant le cristal et l'intégration de chaque molécule dans la surface cristalline. Les différents cristallisoirs sont décrits et ils sont définis par leur échange thermique avec l'extérieur. Si les cristaux sont fragiles ils doivent être respectés par l'agitation. Riche de nombreux exemples pratiques, ce livre développe des expressions utiles pour créer des logiciels. Les annexes et les références bibliographiques facilitent le calcul des matériels et sont une aide au lecteur pour approfondir les questions de son choix.
