Summary of The Narcissist You Know by Joseph Burgo QuickRead, Alyssa Burnette, Unmasking the evil of the everyday narcissist. We often hear the term “narcissistic abuse” cited in psychological case studies and the testimony of mentally broken partners. We are told that social media is making everyone narcissistic. And yet, even as this term is thrown around as an overwhelmingly negative thing, popular makeup brands invoke the aesthetic of self-absorption, even going so far as to literally brand themselves “NARSISSIST.” But what is narcissism really? And what do you need to know to protect yourself against the narcissists among us? The Narcissist You Know (2015) explores the good, the bad, and the ugly sides of narcissism. Summary of Unsettled Alexander Cooper, 2021-09-11 Summary of Unsettled - What Climate Science Tells Us, What It Doesn't, and Why It Matters - A Comprehensive Summary The media, politicians, and other influential voices have declared that the science is settled on climate change. In truth, misunderstanding and disinformation have tainted the long game of telephone from study to reports to the public media. The fundamental concerns of how the climate is responding to our influence and what the consequences will be are mostly unsolved. Climate change is happening, but the why and how aren't as obvious as you may have been led to believe. Now, one of America's most illustrious scientists is attempting to dispel the haze by explaining what science actually says (and doesn't say) about our changing climate. Steven Koonin draws on his decades of experience—including as a top science advisor to the Obama administration—in Unsettled: What Climate Science Tells Us, What It Doesn't, and Why It Matters to deliver up-to-date insights and professional perspective free of political agendas. This fascinating, clear-headed, and full-of-surprises book equips readers with the knowledge and skills they need to better comprehend the climate crisis and to be more savvy consumers of science media in general. Prof. Koonin provides a thorough and easy-to-understand examination of the current state of scientific knowledge on global warming and how human-caused greenhouse gas emissions contribute to it. His research shows that separating human effects on climate from

the overwhelmingly large impact of natural causes is impossible at this time. Koonin takes readers behind the headlines to the more nuanced science behind the headlines, demonstrating where it comes from and guiding us through the evidence's consequences. He debunks common misconceptions and reveals little-known facts, such as the fact that, despite a massive increase in greenhouse gas emissions, world temperatures actually declined between 1940 and 1970. Furthermore, the models we employ to forecast the future are unable to adequately characterize historical climates, implying that they are fundamentally incorrect. Koonin also discusses society's response to climate change, using data-driven research to demonstrate why many proposed solutions would be futile, and how alternatives such as adaptation and, if required, geoengineering can secure humanity's continued prosperity. Unsettled is a hopeful reality check about climate science that you won't find anywhere else—what we know, what we don't, and what it all implies for our future. To be continued... Summary of Self-Compassion by Kristin Neff QuickRead, Alyssa Burnette, Learn to go beyond self-love with a new form of radical compassion. We hear a lot about self-love, self-care, and being kind to ourselves, but what does that really look like in practice? These concepts have been normalized in mainstream media and as a result, we've lost sight of what they mean and how they should function. That's why Kristin Neff argues that it's time for a wakeup call. Neff posits that we need to go deeper by practicing what she calls self-compassion. Do you want more free book summaries like this?
