Frogs of the United States and Canada C. Kenneth Dodd, 2023-06-20 The premiere reference book on the 108 species of frogs inhabiting North America north of Mexico. An unparalleled synthesis of the biology and behavior of all native and nonindigenous species, this two-volume, extensively referenced resource has been called the most important book ever published on North American anura. Color photographs and range maps accompany species accounts detailing information on etymology, nomenclature, identification, distribution, fossil record, systematics and geographic variation, life history and ecology, behavior, population and community biology, and conservation. This new edition of the text contains the following updates: Literature citations have been added from 2012 to 2021, now spanning from 1709 to 2021. Distribution maps have been updated, recording the decreased ranges due to declining amphibian populations. Photographs have been revised to ensure the highest digital quality. *Anaxyrus williamsi* and *Lithobates kauffeldi*, newly described species, have been included. An account is also included for *Gastrophryne mazatlanensis*, now recognized as occurring within the United States. Generic keys have been added. A brief section on N.A. frogs in history and art have been added. Nomenclature has been updated (*Incilius* for *Ollotis*). Now the only up-to-date and comprehensive resource for those trying to protect amphibians in the US and Canada, as well as for researchers and wildlife managers who study biodiversity--

Frog and Toad All Year Arnold Lobel, 1976-08-25 Friends all year. In winter, spring, summer, and fall, Frog and Toad are always together. Here is a wise and wonderful story for each season of the year-and one for Christmas, too.

Chemical Ecology for the National Academy of Sciences, 1995-09-01 Chemical signals among organisms form a vast communicative interplay, fundamental to the fabric of life, in the words of one expert. Chemical ecology is the discipline that seeks to understand these interactions-to use biology in the search for new substances of potential benefit to humankind. This book highlights selected research areas of medicinal and agricultural importance. Leading experts review

the chemistry of: Insect defense and its applications to pest control. Phyletic dominance—the survival success of insects. Social regulation, with ant societies as a model of multicomponent signaling systems. Eavesdropping, alarm, and deceit—the array of strategies used by insects to find and lure prey. Reproduction—from the gamete attraction to courtship and sexual selection. The chemistry of intracellular immunosuppression. Topics also include the appropriation of dietary factors for defense and communication; the use of chemical signals in the marine environment; the role of the olfactory system in chemical analysis; and the interaction of polydnaviruses, endoparasites, and the immune system of the host.

Reproductive Technologies and Biobanking for the Conservation of Amphibians Aimee J. Silla, Andy J. Kouba, Harold Heatwole, 2022-10-03 How to decelerate loss of global biodiversity is one of the greatest challenges of our generation. Reproductive technologies have enormous potential to assist the recovery of species by enhancing reproductive output, facilitating genetic management, and supporting reintroduction of threatened species. Of particular value are cryopreservation technologies coupled with the establishment of global gene banks to conserve, in perpetuity, the remaining extant genetic diversity of threatened amphibians. Reproductive Technologies and Biobanking for the Conservation of Amphibians brings together leading experts in the field to provide a comprehensive overview of current best practices, summarise technological advancements, and present a framework for facilitating the integration of reproductive technologies and biobanking into conservation breeding programs for threatened amphibians. It is an invaluable reference for the next generation of conservation practitioners: captive breeding facilities, researchers, and policy-makers involved with biodiversity conservation.

The Frogs and Toads All Sang Arnold Lobel, Adrienne Lobel, 2009-05-26 From Caldecott Medalist Arnold Lobel (1933-1987) comes a brand-new collection of rhyming stories about frogs and toads. Discovered by his daughter, Adrienne Lobel, *The Frogs and Toads All Sang* has the same warmth, compassion, and humor that is found in his best-loved work. Brimming with sweet silliness, this new book reminds us why Arnold Lobel's characters continue to be so popular years after

debut.

Threatened Amphibians of the World S. N. Stuart, Conservation International, 2008 Amphibians are facing an extinction crisis, but getting to the facts has been difficult. *Threatened Amphibians of the World* is a visual journey through the first-ever comprehensive assessment of the conservation status of the world's 6,000 known species of frogs, toads, salamanders, and caecilians. All 1,900 species known to be threatened with extinction are covered, including a description of threats to each species and an evaluation of conservation measures in place or needed. Each entry includes a photograph or illustration of the species where available, a distribution map, and detailed information on range, population and habitat and ecology. Introductory chapters present a detailed analysis of the results, complemented by a series of short essays written by many of the world's leading herpetologists. Appendices include annotated lists of lower risk species and a country-by-country listing of threatened amphibians.--pub. desc.

web physics formula 1 apply coulomb's law q_1 first charge q_2 second charge r distance between both charge ϵ_0 permittivity of free space $\frac{1}{4\pi\epsilon_0} = 9 \times 10^9 \text{ Nm}^2 \text{ C}^{-2}$ physics formula 2 coulomb's force law between two point charges q_1 and q_2 located at r_1 and r_2 is then expressed as physics formula 3
