Thinking with Kierkegaard Arne Grøn,2022-12-31 Arne Grøn's reading of Søren Kierkegaard's authorship revolves around existential challenges of human identity. The 35 essays that constitute this book are written over three decades and are characterized by combining careful attention to the augmentative detail of Kierkegaard's text with a constant focus on issues in contemporary philosophy. Contrary to many approaches to Kierkegaard's authorship, Grøn does not read Kierkegaard in opposition to Hegel. The work of the Danish thinker is read as a critical development of Hegelian phenomenology with particular attention to existential aspects of human experience. Anxiety and despair are the primary existential phenomena that Kierkegaard examines throughout his authorship, and Grøn uses these negative phenomena to argue for the basically ethical aim of Kierkegaard's work. In Grøn's reading, Kierkegaard conceives human selfhood not merely as relational, but also a process of becoming the self that one is through the otherness of self-experience, that is, the body, the world, other people, and God. This book should be of interest to philosophers, theologians, literary studies scholars, and anyone with an interest not only in Kierkegaard, but also in human identity.

The Power of Morality in Movements Anders Sevelsted,Jonas Toubøl,2022-11-07 This Open Access book explores the role of morality in social movements. Morality has always been central to social movements whether it be in the form of the moral foundations of movement claims, politics and ideologies, the values motivating participation, the new moral principles envisioned and practiced among movement participants, or the overall struggle over society's moral values that movements engage in. This is evident in movements emerging from recent interlinked crises: the crisis of human rights, the climate crisis, and the developing crisis of democracy. In analyzing these current events through a variety of theoretical, methodological, and empirical lenses, this book brings morality to the forefront of the discussion, allowing for a rethinking of its role. The book is divided into five parts. The first part introduces and explores the central concept of the book, outlining the dominant existing approaches to morality and ethics in the extant movement and civil society literature. The following three parts investigate morality in relation to topics and movements that are either prominent to contemporary politics or salient to the question of morality. In these empirically informed parts, the authors apply a diverse selection of methods spanning fieldwork, historiography, traditional and novel statistical analytical methods, and big data analysis to a diverse

selection of data. Topics discussed include refugee solidarity movements, male privilege and anti-feminism movement, environmental and climate justice movements, and religious activism. The fifth and closing part of the book focuses on the more abstract theoretical question of the relationship between morality and ethics and activist practices and points to future research agendas. This book will be of general interest to students, scholars and academics within the disciplines of political sociology, -science and -anthropology and of particular interest to academics in the subfields of social movement and civil society studies.

Handbook on ICT in Developing Countries Knud Erik Skouby,Idongesit Williams,Albert Gyamfi,2022-09-01 Handbook on ICT in Developing Countries: Next Generation ICT Technologies is the second volume of the Handbook of ICT in Developing Countries. The first volume was on the potential implementation and service delivery of the forth-coming 5G networks. Here the focus is on the new technologies and services enabled by 5G networks or broadband Internet networks including artificial Intelligence (AI), machine learning, augmented reality, Internet of Things (IoT), autonomous driving, blockchain solutions, cloud solutions etc. Some of these are already globally experiencing growth in the existing networks and all of them are expected to grow substantially in the future. Examples: currently, 5% of global organizations have fully adopted AI, but the penetration is expected to increase rapidly before 2025. IoT with 20.35 billion devices connected in 2017 is estimated to show 75.44 billion devices connected in 2025. The expected growth is based on delivering of new value to businesses and citizens. It is, however, not obvious that this growth will also occur in developing countries. Currently, the digital divide

between developing countries and developed countries is widening. This is mostly due to the lack of infrastructure and low level of awareness by the businesses and citizens of the value made possible by the new technologies for developing countries. The book discusses the potentials of the new technologies for developing countries and the need for market interventions that will facilitate the demand and supply side of the market. It is designed for a broad audience including practitioners, researchers, academics, policy makers and industry players and influencers. The language and approach to the handbook is a combination of the academic writing style and professional reviews.
