Beckett, Deleuze and Performance Daniel Koczy, 2018-08-28 This book draws on the theatrical thinking of Samuel Beckett and the philosophy of Gilles Deleuze to propose a method for research undertaken at the borders of performance and philosophy. Exploring how Beckett fabricates encounters with the impossible and the unthinkable in performance, it asks how philosophy can approach what cannot be thought while honouring and preserving its alterity. Employing its method, it creates a series of encounters between aspects of Beckett's theatrical practice and a range of concepts drawn from Deleuze's philosophy. Through the force of these encounters, a new range of concepts is invented. These provide novel ways of thinking affect and the body in performance; the possibility of theatrical automation; and the importance of failure and invention in our attempts to respond to performance encounters. Further, this book includes new approaches to Beckett's later theatrical work and provides an overview of Deleuze's conception of philosophical practice as an ongoing struggle to think with immanence.

Aircraft Performance Mohammad H. Sadraey, 2017-01-27 Aircraft Performance: An Engineering Approach introduces flight performance analysis techniques that enable readers to determine performance and flight capabilities of aircraft. Flight performance analysis for prop-driven and jet aircraft is explored, supported by examples and illustrations, many in full color. MATLAB programming for performance analysis is included, and coverage of modern aircraft types is emphasized. The text builds a strong foundation for advanced coursework in aircraft design and performance analysis.

Method of Matching Components and Predicting Performance of a Turbine-propeller Engine Alois T. Sutor, Morris A. Zipkin, 1951 Analytical expressions are derived to show the geometric, thermodynamic, and aerodynamic relations among compressor, turbine, and exhaust nozzle for a gas-turbine engine. For a known compressor performance map, a matching method is described to show some of the design compromises that must be made when the components are to be combined into a turbine-propeller engine. A method of predicting engine performance for a range of operating conditions from known component maps is presented. An illustrative example of the matching method and the performance

analysis is presented, showing some of the practical limitations of engine operation.
