*Social Goals in the Classroom* Martin H. Jones, 2019-09-18 *Social Goals in the Classroom* is the first volume to comprehensively examine the variety of students' non-academic goals and motivations within the classroom. Each expertly written chapter defines and investigates a particular aspect of students' social objectives before addressing related findings on academic performance, interpersonal outcomes, and directions for future research. Presented in three succinct and comprehensive parts, this book reviews, expands upon, and theoretically synthesizes current research on the many different social goals to offer readers a thorough understanding of non-academic desires and their consequences on learners' educational experiences. Situated in evidence-based theory as well as real-world contexts such as ethnicity, sexual orientation, and social media, this insightful collection—ideal for graduate students, teachers, and researchers—explores how students' social motives influence their academic performance and peer relationships.

Examples throughout show how to use psychology in the workplace and in personal relationships, while demonstrating the role psychology plays in other practical everyday issues. This book helps examine personal studying and learning styles with several new pedagogical aids -- encouraging readers to apply what they are learning to their everyday lives--

Measuring and Attaining the Goals of Education ASCD Committee on Research and Theory,Wilbur B. Brookover,1980 Ten broad goals of education that encompass cognitive, affective, and psychomotor behaviors are: (1) competency in basic skills;

(2) ability to objectively see oneself; (3) understanding others; (4) using accumulated knowledge to interpret the world; (5) continuous learning; (6) mental and physical well being; (7) participation in the economic world of production and consumption; (8) responsible societal membership; (9) creativity; and (10) coping with change. A set of research questions and hypotheses on goal and subgoal interrelationships were developed and are concerned with the extent to which the achievement of one goal facilitates or interferes with the achievement of other goals, and the relationship of the content and processes within the learning environment to the achievement of multiple goals of education. A review of available measurement instruments, both published and unpublished, is presented along with information about their appropriateness for use in determining student achievement of the specified educational goals. A research model for use in determining student achievement of the goals of education identifies several types of educational variables which may affect outcomes and offers some sample sets of research hypotheses.
