The Circular Flow of Income Through Various Sectors of an Economy Khaterine Capa,Florinda Garcia-Vigonte,Marmelo V. Abante,2023 This study focuses on how the circular flow of income works as an economic model. Specifically, it aims to illustrate the circular flow of income model and describe how income or money flows through various sectors of an economy - the household sector, business sector, government sector, and foreign sector. The circular flow of income model is a fundamental illustration of how a free-market economic system works. It demonstrates how economic sectors interact with the four key marketplaces that govern money flow across the national economy, making it a useful tool for understanding the economic framework in which businesses operate. It emphasizes the relationship between income and expenditure in an economy. Therefore, understanding the circular flow of income becomes essential for understanding the economic wealth of a country.
