Perspectivas de la economía mundial, abril de 2015 International Monetary Fund. Research Dept.,2015-06-09 El crecimiento mundial sigue siendo moderado y desigual, y varias fuerzas complejas están determinando las perspectivas: tendencias a mediano y largo plazo, shocks mundiales y muchos factores específicos de países y regiones. En el informe WEO de abril de 2015 se examinan las causas e implicaciones de tendencias recientes, como los precios más bajos del petróleo, que están estimulando el crecimiento a escala mundial y en muchos países importadores de petróleo pero que están lastrando la actividad en los países exportadores de petróleo, y fluctuaciones importantes de los tipos de cambio de las principales divisas, debidas a variaciones en las tasas de crecimiento y las políticas cambiarias de los países y a precios más bajos del petróleo. Además, en los capítulos analíticos se estudia la tasa de crecimiento del producto potencial en las distintas

economías avanzadas y de mercados emergentes, evaluando su evolución reciente y probable trayectoria futura; y el desempeño de la inversión privada fija en las economías avanzadas, un tema destacado del debate sobre políticas públicas en los últimos años, centrando la atención en la debilidad económica general como causa de los resultados observados.
