Project Management and BIM for Sustainable Modern Cities Mohamed Shehata, Fernanda Rodrigues, 2018-10-30

This volume presents innovative work on innovative methods, tools and practices aimed at supporting the transition of Asian and Middle Eastern cities and regions towards a more smart and sustainable dimension. The role of the built and urban environment are becoming more pronounced in Asia and Middle East as the regions continues to experience rapid increase in population and urbanisation, which have only led to an increase in environmental degradation but also rise in energy consumption and emissions. Individual chapters covers timely topics such as sustainable infrastructure, transportation, renewable energy, water and methods supporting an innovative and sustainable development of urban areas. Real-world examples are presented to highlight recent developments and advancements in design, construction and transportation infrastructures. The volume is based on the best contributions to the 2nd GeoMEast International Congress and Exhibition on Sustainable Civil Infrastructures, Egypt 2018 - The official international congress of the Soil-Structure Interaction Group in Egypt (SSIGE).

Causes, Impacts and Solutions to Global Warming Ibrahim Dincer, Can Ozgur Colpan, Fethi Kadioglu, 2013-10-29 Global Warming: Causes, Impacts and Solutions covers all aspects of global warming including its causes, impacts, and engineering solutions. Energy and environment policies and strategies are scientifically discussed to expose the best ways to reduce global warming effects and protect the environment and energy sources affected by human activities. The importance of green energy consumption on the reduction of global warming, energy saving and energy security are also discussed. This book also focuses on energy management and conservation strategies for better utilization of energy sources and technologies in buildings and industry as well as ways of improving energy efficiency at the end use, and introduces basic methods for designing and sizing cost-effective systems and determining whether it is economically efficient to invest in specific energy efficiency or renewable energy projects, and describes energy audit producers commonly used to improve the energy efficiency of residential and commercial buildings as well as industrial facilities. These features and more provide the tools necessary to reduce global warming and to improve energy management leading to higher energy efficiencies. In order

to reduce the negative effects of global warming due to excessive use of fossil fuel technologies, the following alternative technologies are introduced from the engineering perspective: fuel cells, solar power generation technologies, energy recovery technologies, hydrogen energy technologies, wind energy technologies, geothermal energy technologies, and biomass energy technologies. These technologies are presented in detail and modeling studies including case studies can also be found in this book.

Management of Wastewater and Sludge Izharul Haq Farooqi, Saif Ullah Khan, 2023-05-12 Management of micropollutants and disinfection of byproducts in municipal wastewater and extraction of energy from the sludge produced in wastewater treatment plants is under constant focus. This book presents a detailed know-how regarding sustainable management of waste produced in municipal and industrial activities through novel state-of-the-art techniques used for the treatment of toxic industrial wastes and municipal wastewater. It deals with the management of municipal sludge and solid waste including leachates produced from landfill sites. It also provides detailed information for achieving the stringent standards set by regulatory bodies for municipal and industrial effluents. Features: Covers development of new novel reactor configurations for wastewater treatment. Describes handling and removal of emerging contaminants like pharmaceutical compounds, endocrine disruptors, and disinfection byproducts. Deliberates combination of wastewater and micropollution. Contains an in-depth discussion on treatment and disposal of fecal sludge. Highlights new economically feasible techniques to enhance biogas recovery from treatment plant sludges. This book is aimed at researchers and graduate students in environmental engineering, wastewater treatment, mechanical engineering, chemical engineering, and energy engineering.

Green Energy and Infrastructure Jacqueline A. Stagner, David S-K. Ting, 2020-10-12 C. S. Lewis rightly instructed, The task of the modern educator is not to cut down jungles, but to irrigate deserts. This book aims to achieve this task by pushing the frontiers of scholarship for securing a sustainable future through green energy and infrastructure. This encompasses the notion that what we create is in harmony and integration with both the spatial and temporal domains. Through numerous practical examples and illustrations, this book examines a comprehensive review of the latest science on indoor environmental health, energy requirements for buildings, and the greening of infrastructure. Also, it provides a discussion on the underlying properties of biomass and its influence on furthering energy conversion technologies. Energy storage is essential for driving the integration of renewable energy, and different storage approaches are discussed in terms of power balancing, grid stability, and reliability. Features: Focuses on the importance of coupling green energy with green infrastructure Provides an unbiased update of the state-of-the-art of sustainability science Discusses utilizing sustainable building materials for simultaneous improvement in energy, economic, and environmental bottom lines for industry Illuminates practical steps that need to be undertaken to achieve a greener infrastructure Green Energy and Infrastructure: Securing a Sustainable Future is appropriate for researchers, students, and decision-makers seeking the latest, practical

information on environmental sustainability.

Promoting Sustainable Building Materials and the Implications on the Use of Wood in Buildings Helen Goodland, 2016 This study provides an overview of the current policy and regulatory environment regarding sustainable construction materials in the building sector in Europe and North America, and, where applicable, offers a commentary on the effectiveness of such regimes in driving the adoption of wood products. The study's objective has been to conduct a broad survey across a range of policies, initiatives and programmes in order to document the current circumstances as a starting point for further discussions, technical meetings and policy debates with a view to enhance the use of wood in buildings through policy advice to member states.

Plumbing Principles and Practice Syed Azizul Haq, 2021-09-06 This book provides a complete introduction to plumbing services. It explains the principles and provides practical examples of the planning, design, installation and maintenance of the plumbing technologies applicable to single-storey buildings, skyscrapers and everything in between. The book begins with an introduction to plumbing technology, the trade and its evolution. Chapters then cover: Pipes, fittings and accessories and their installation and testing Pumps and pumping systems Hydraulic principles Hot and cold water supply systems Fixtures and appliances Sanitary and storm drainage systems Special concerns such as seismic issues, safety, security and the state of the art. Written and the figures drawn by a registered professional engineer and experienced teacher, this book is suitable for use on a wide range of courses from building services engineering, civil engineering, construction technology, plumbing services, environmental engineering, water engineering and architectural technology.

Social Movements against Wind Power in Canada and Germany Andrea Bues, 2020-05-28 Taking a comparative case study approach between Canada and Germany, this book investigates the contrasting response of governments to anti-wind movements. Environmental social movements have been critical players for encouraging the shift towards increased use of renewable energy. However, social movements mobilizing against the installation of wind turbines have now become a major obstacle to their increased deployment. Andrea Bues draws on a cross-Atlantic comparative analysis to investigate the different contexts of contentious energy policy. Focusing on two sub-national forerunner regions in installed wind power

capacity – Brandenburg and Ontario – Bues draws on social movement theory to explore the concept of discursive energy space and propose explanations as to why governments respond differently to social movements. Overall, *Social Movements against Wind Power in Canada and Germany* offers a novel conceptualization of discursive-institutional contexts of contentious energy politics and helps better understand protest against renewable energy policy. This book will be of great interest to students and scholars of renewable energy policy, sustainability and climate change politics, social movement studies and environmental sociology.
