*The ESC Textbook of Preventive Cardiology* Stephan Gielen, Guy De Backer, Massimo Piepoli, David Wood, 2015 Covering principles and practice, The ESC Textbook of Preventive Cardiology is a state-of-the-art resource in primary and secondary prevention of cardiovascular disease. Comprehensive and extensively linked to practice guidelines, it connects the latest evidence to strategies and proposals for the implementation of prevention in clinical practice.

Fundamentals of Human Physiology Giovanni Cavagna, 2019-06-12 This textbook explores the fundamental qualitative and quantitative aspects of human physiology. It approaches biological and physiological processes and phenomena from a quantitative perspective, revealing how physiological problems can be mathematically formulated starting from simple laws of physics. The book addresses a broad range of topics, including: the statics and dynamics of circulation; muscle and sarcomere force-length and force-velocity relations, together with their mechanisms and functional consequences; subdivisions and meaning of the heat produced by muscle; locomotion, statics and dynamics of respiration; diffusion of gases and acid base equilibrium; phonation; general functions of the kidney and of the different sections of the nephron; changes in clearance with a substance's plasmatic concentration; pH regulation and the kidney; Donnan's equilibrium and its consequences; and the Nernst equation. The book offers the ideal learning resource for students of human physiology courses in medicine and biomedicine, as well as biomedical engineering and biophysics graduate students. An elementary grasp of mathematics and physics is sufficient to understand the content.

**Essential Geriatrics** Henry Woodford, 2010 In an ageing population, those who specialise in the treatment of older people are more essential than ever. The specialty is also becoming more evidence-based as research into care of the elderly grows. This second edition of Essential Geriatrics has been comprehensively updated and expanded, with entirely new

sections on the ageing process and a selection of important topics. In addition there are 100 questions throughout the text in the modern knowledge-based 'best of five' format, with answers. This text specifically focuses on the key aspects of elderly care, spanning both general medicine and the particular problems encountered in geriatrics as a route into the specialty: the subjects chosen typically receive scant coverage in general medical texts. Practical guidance for managing the conditions covered is included at the end of each section, with reasoned approaches to areas where evidence is more scarce. Eloquently describes the knowledge and experience base essential for practitioners of geriatric medicineA - James George in his Foreword From reviews of the first edition: Strongly recommended to geriatricians of all grades and valuable for all members of the multi-disciplinary team on the shelf of the ward office.
