**Women in Technological and Non-Technological Enterprises** Helen Aderemi, 2010-09 The paths that women entrepreneurs tread in creating and growing their businesses vary. This book made use of empirical data obtained from 210 micro and small scale enterprises owned by women. The study employed structured questionnaire and the Raosoft sample size calculator based on the normal distribution statistical method. Secondary data were also used. Descriptive and inferential statistics were employed for data analysis. The study revealed a divergence in knowledge mechanism and motivational factors of technology-based and service based entrepreneurs while convergence exists in control parameters for performance. Recommendations were made towards boosting the knowledge systems and growth of the women entrepreneurs especially in technological ventures.

**The Survey System**, 200? Want to take a survey but not sure how many responses to collect? This calculator gives you the number for any given population size and desired confidence level. A reverse calculator lets you enter characteristics of an existing survey and gives the confidence interval (plus-or-minus number) to apply to the results. This site, sponsored by a survey software company, also gives clear explanations of statistical significance, survey design, and related concepts. Copyright: LIIWeek, 2004.

**Sample Size Calculations (Study Design Based) Using PS Software and Sampling Selection (Penerbit USM)**

Wan Muhamad Amir W Ahmad, Norsamsu Arni Samsudin, Munirah Mohd Adnan, Adam Husein, 2019-08-09 What is the minimum sample size required in my study? How do we select a sample? This book was prepared based on the basic and important questions which are commonly voice out by the undergraduate or postgraduate students and research officers. With the best solution, this book will help them in managing their dilemma in determining the accurate sample size and selection sampling method before commencing any applied research. Sample size determination for each study design is discussed in a simple yet compact way by using a free and readily downloaded software, Power and Sample software. Suitable to those who want a quick revision, this book is the best help among all as it is also comes with example of studies. Sampling methods and summary of data analysis are also being included to fulfill the purpose in conducting the research.

The best part of this book is it provides interesting illustrated presentation in some chapters that made this handy book more irresistible to read.

*Determining Sample Size* Patrick Dattalo, 2008 A researcher's decision about the sample to draw in a study may have an enormous impact on the results, and it rests on numerous statistical and practical considerations that can be difficult to juggle. Computer programs help, but no single software package exists that allows researchers to determine sample size across all statistical procedures. This pocket guide shows social work students, educators, and researchers how to prevent some of the mistakes that would result from a wrong sample size decision by describing and critiquing four main approaches to determining sample size. In concise, example-rich chapters, Dattalo covers sample-size determination using power analysis, confidence intervals, computer-intensive strategies, and ethical or cost considerations, as well as techniques for advanced and emerging statistical strategies such as structural equation modeling, multilevel analysis, repeated measures MANOVA and repeated measures ANOVA. He also offers strategies for mitigating pressures to increase sample size when doing so may not be feasible. Whether as an introduction to the process for students or as a refresher for experienced researchers, this practical guide is a perfect overview of a crucial but often overlooked step in empirical social work research.

**Personality, Gender and Workplace Bullying** Tarisai Chikungwa Everson, 2013 Amongst other factors workplace bullying has contributed to less productivity, unprofitability, turnover and inefficiency amongst employees in many organisations though most of these incidences of workplace bullying go unreported. These goes on to cost the organisations severely, the study therefore seeks to determine whether or not workplace bullying do exist among the Mobile Network providers' call center operators and supervisors, establish the influence of employee gender orientation on the employee's workplace bullying proneness and to investigate the role of personality on workplace bullying on the call centre operators and supervisors. Call centre operators are the "face" of cell phone network service providers as they represent the organisations at large when dealing with clients. Their efficiency, loyalty, employee satisfaction and productivity are key to the organisation's survival hence absence of these might put the competitiveness of these firms at stake. It is therefore important to diagnose and understand the nature of workplace bullying that occurs in their organisations and nip them in the bud as such behaviours can cause detrimental decay to the organisation's image. However the extend of the damage to the organisations through workplace bullying still needs substantiation. Empirical evidence on the influence of employee personality and or gender orientation on workplace bullying in Africa particularly in South Africa is inadequate and not yet well established. Furthermore, the outcome of immense costs on organisations resulting from personality and or gender related workplace bullying, has not been fairly investigated, particularly in call centres of the major South African cell phone network providers. Bullying is increasingly being documented as a key challenge within most work place environments

(Mayhew, McCarthy, Chappell, Quinlan, Barker & Sheehan, 2004). Qualitative research will be utilised, targeting call centre operators and supervisors from MTN, CellC and Vodacom branches in Johannesburg. Using simple random probability and convenience (non-probability) sampling the researcher will interview participants on their availability. A sample of 100 call centre operators and 20 supervisors (calculated using the Raosoft sample size calculator) will suffice the objectives of the study. The instrument will be tested for reliability using Cronbach's alpha. Salin, 2003 have reported that less represented sex seems to be more exposed and vulnerable to workplace bullying. In a work environment where female employees dominate, male employees are more vulnerable and exposed to bullying. Empirical studies (Vartia, 2001; Mikkelsen & Einarsen, 2002) conducted in the Nordic countries have shown that a personality construct, such as neuroticism, is also related to exposure to workplace bullying and that victims act more actively in conflict situations than do others. More so, (Zapf 1999)'s study reported that victims of bullying portrayed personality traits of anxiety and depression even before the onset of bullying. Bullying can severely undermine an individual's confidence and self-esteem, making it difficult to speak up, especially if bullying is perceived to be part of the workplace culture. This goes on to cause employee turnover unproductivity, unprofitability, poor morale and erosion of employee loyalty and commitment. It is important, therefore, that employers promote a clear message that bullying is unacceptable in the workplace. Employers should also ensure that all the employees are aware that the workplace has established anti-bullying procedures, know the process for the reporting and have an understanding that their reports will be dealt with in a proper manner.
