*Adulteration Analysis of Some Foods and Drugs* Alankar Shrivastava, 2018-08-02 Adulteration refers to the practice of altering food or pharmaceutical content to reduce production costs. Factors affecting this practice include market forces such as easy availability of food adulterants, bargaining power of consumers and large demand and supply gaps which incentivize such practices. Technological advancements in chemical analysis now help us to identify adulterated food and drugs more easily. *Adulteration Analysis of Some Foods and Drugs* is a sourcebook describing analytical methodologies for the determination of adulterants in different food items (milk, honey, juice) and drugs (dietary supplements, sildenafil and specific plant extracts). Additional chapters give guidelines for analyzing a food or drug sample. This book is suitable for researchers working in the field of analytical chemistry for the determination of adulterants. The concise and organized presentation of the contents also serves to enhance the level of knowledge of students undertaking food and drug safety / quality control training courses.

In addition, the authors give practical advice on how to prepare mobile phases, choose a suitable detector, and set up an HPLC analysis. This book is comprehensive for the average professional or technician who plans to work with modern HPLC. This book is useful for most Drug Quality Control Laboratories where modern HPLC is utilized. *Current Advances in Drug Delivery Through Fast Dissolving Disintegrating Dosage Forms* Dr. Priyanka Gupta Manglik, 2024-08-15 Explores recent research, formulation strategies, and clinical applications of rapidly dissolving and

disintegrating drug delivery systems for improved patient compliance.

**Current Advances in Drug Delivery Through Fast Dissolving/Disintegrating Dosage Forms** Vikas Anand Saharan, 2017-05-11 Fast Dissolving/Disintegrating Dosage Forms (FDDFs) have been commercially available since the late 1990s. FDDFs were initially available as orodispersible tablets, and later, as orodispersible films for treating specific populations (pediatrics, geriatrics, and psychiatric patients). Granules, pellets and mini tablets are among latest additions to these dosage forms, which are still in the development pipeline. As drug delivery systems, FDDFs enable quicker onset of action, immediate drug delivery, and sometimes offer bioavailability benefits due to buccal/sublingual absorption. With time, FDDF have evolved to deliver drugs in a sustained and controlled manner. Their current market and application is increasing in demands with advances in age adapted dosage forms for different patients and changing regulatory requirements that warrant mandatory assessments of new drugs and drug products before commercial availability. This book presents detailed information about FDDFs from their inception to recent developments. Readers will learn about the technical details of various FDDF manufacturing methods, formulation aspects, evaluation and methods to conduct clinical studies. The authors also give examples of marketed fast disintegrating/dissolving drug products in US, Europe, Japan, and India. This reference is ideal for pharmacology students at all levels seeking information about this specific form of drug delivery and formulation.

**Horse Who Came to Dinner** Glenn Taylor, 2019-02-08 Food fraudsters be warned! Sophisticated science was at the centre of detecting and prosecuting this new crime of food fraud. The ground-breaking case, a first of its kind, needed new sentencing guidelines for judges, new working arrangements for prosecutors and police and an EU-wide agreement on techniques and standards used for prosecution, which were agreed on the hoof in response to a crime detected in over 40 countries. In 2013 thousands of consumers, retailers and food businesses were ripped-off by insiders - thieves who substituted and sold horse-meat in place of beef. They used a web of deception that involved unwitting suppliers passing off their fraudulent produce to some of Britain's largest retailers and international food business. Following so-called Horsegate, the enforcement world had to change. There is now a team focussing on food fraud and a desire to put the perpetrators behind bars. Much tougher sanctions have been introduced with the aim of discouraging such crimes. This book is a timely look at the web of deception and how it can be stopped. Aimed at food enforcement professionals, lay readers with an interest in crime, students studying food fraud, criminology or forensics and anyone who eats food. Once again, life emulated art, this deception mirrors the story of the thief who came to dinner, gained inside knowledge and stole priceless artefacts from the host. So, who will come to dinner next time? This is the second book by the author, a scientist sharing his inside knowledge on this food crime.
