**Pamela L. Swearingen**

Nursing Diagnosis Lynda Juall Carpenito-Moyet, 2008 Explains the role of nursing diagnosis in clinical practice; provides information on definitions, characteristics, related factors, and interventions for nursing diagnoses; and offers information on collaborative problems.

**Nursing Diagnoses 2009-2011, Custom** NANDA International, 2010-06-11 A nursing diagnosis is defined as a clinical judgement about individual, family or community responses to actual or potential health problems or life processes which provide the basis for selection of nursing interventions to achieve outcomes for which the nurse is accountable. Accurate and valid nursing diagnoses guide the selection of interventions that are likely to produce the desired treatment effects and determine nurse-sensitive outcomes. Nursing diagnoses are seen as key to the future of evidence-based, professionally-led nursing care - and to more effectively meeting the need of patients and ensuring patient safety. In an era of increasing electronic patient health records standardized nursing terminologies such as NANDA, NIC and NOC provide a means of collecting nursing data that are systematically analyzed within and across healthcare organizations and provide essential data for cost/benefit analysis and clinical audit. 'Nursing Diagnoses: Definitions and Classification' is the definitive guide to nursing diagnoses worldwide. Each nursing diagnosis undergoes a rigorous assessment process by NANDA-I with stringent criteria to indicate the strength of the underlying level of evidence. Each diagnosis comprises a label or name for the diagnosis and a definition. Actual diagnoses include defining characteristics and related factors. Risk diagnoses include risk factors. Many diagnoses are further qualified by terms such as effective, ineffective, impaired, imbalanced, readiness for, disturbed, decreased etc. The 2009-2011 edition is arranged by concept according to Taxonomy II domains (i.e. Health promotion, Nutrition, Elimination and Exchange, Activity/Rest, Perception/Cognition, Self-Perception, Role Relationships, Sexuality, Coping/ Stress Tolerance, Life Principles, Safety/Protection, Comfort, Growth/Development). The book contains new chapters on 'Critical judgement and assessment' and 'How to identify appropriate diagnoses' and core references for all nursing diagnoses. A companion website hosts NANDA-I position statements, new PowerPoint slides, and FAQs for students. 2009-2011 edition arranged by concepts New chapters on 'Critical judgement and assessment' and 'How to identify appropriate diagnoses' Core references for new diagnoses and level of evidence for each diagnosis Companion website available

Each chapter incorporates a research and theory-based approach to the aging process. Content is comprehensive and focuses on caring for the older adult. The text examines the differences between normal aging

conditions and clinical problems/conditions. Competencies and Roles in Gerontological Nursing section focuses on the process that nurses, especially clinical nurse specialists, use to impact gerontological nursing care. Nursing care plans provide the practitioner with nursing care scenarios applied to clinical practice. Expanded content on functional assessment, including addressing communication issues, both verbal and non-verbal, alerts the reader to vital issues that may affect the patient's plan of care. Color insert visually complements material on the integumentary section as it illustrates some of the major integumentary conditions affecting the gerontologic population. Reflections boxes written by experts across different nursing fields share personal experiences related to the chapters' content. Toward Better Health boxes provide key considerations for promoting healthy lifestyles. Assessment boxes emphasize specific physical tests and observations to make when assessing a patient. Age-Related Changes boxes detail the ways in which particular body systems are affected by the aging process.
